

# 2021–2022 STAAR Interim Assessments Summary Report

The State of Texas Assessments of Academic Readiness (STAAR®) Interim Assessments are an optional online tool that can be used by teachers or their districts to monitor student progress, predict student performance on the STAAR (i.e., summative) assessment, and provide additional information about student learning. More information about the STAAR Interim Assessments is available on the [STAAR Interim Assessments webpage](#).

The design, test development, and technical details, such as making multi-stage testing (MST) routing decisions and predicting the probabilities of students reaching each performance level on the corresponding spring STAAR assessments, are described in the [STAAR 2018–19 Interim Assessment Technical Report](#).

The purpose of this summary report is to present information about the 2021–2022 STAAR Interim Assessments, including an overview of the instruments, test administration, student participation, and comparisons with the 2020–2021 school year interim performance wherever applicable.

During the 2021–2022 school year, the interim assessments were available only for students receiving in-person learning in schools. For detailed guidance and instructions on the STAAR Interim Assessments, please refer to the [STAAR Interim Assessments User Manual](#).

## Test Instrument

The following information describes the designs of the STAAR Interim Assessments:

- The grades 3–8 mathematics and reading; grades 3–5 Spanish mathematics and reading; Algebra I; English I; and English II assessments were developed using the MST design. These tests began with a set of questions that was the same for all students in the first section. Then, students were routed to an appropriate section in the second stage based on their performance in the first section. These assessments were shorter than their corresponding STAAR assessments.
- The grade 5 science, grade 5 Spanish science, grade 8 science, grade 8 social studies, Biology, and U.S. History interim assessments used the linear test design (i.e., all students received the same questions) and were shorter than their corresponding STAAR assessments.
- Interim assessments that were available in 2021–2022 and 2020–2021 school years had comparable reliability, which was also comparable with the spring 2022 STAAR assessments. These reliabilities are presented in Appendix A: Interim Test Reliability. The reliabilities of 2021–2022 interim assessments ranged from 0.73 to 0.89.

## Test Administration

The following information details the administration of the STAAR Interim Assessments:

- The grades 3–8 mathematics and reading; grades 3–5 Spanish mathematics and reading; Algebra I; English I; and English II assessments were available for both interim testing opportunities, while grade 5 science, grade 5 Spanish science, grade 8 science, grade 8 social studies, Biology, and U.S. History were only available during the second interim testing opportunity.
- A total of 3,541,264 interim assessments were administered in the 2021–2022 school year, which represents a 49.8 percent increase from the 2020–2021 school year (in which 2,364,764 interim assessments were administered). Appendix B: Interim Test Administration, presents the number of administrations in the 2021–2022 school year by test title and opportunity.
- The total number of interim assessments during the first interim testing opportunity was 1,120,463, which was 100 percent more than the first interim testing opportunity in the 2020–2021 school year (in which 560,190 interim assessments were administered).
- The total number of interim assessments during the second opportunity was 2,420,801, which was about 34.1 percent more than that of the same opportunity in the 2020–2021 school year (in which 1,804,574 interim assessments were administered).

## Test Participation

The following information details the test participation data from the STAAR Interim Assessments:

- A total of 1,333,839 students from 3,842 campuses and 1,005 districts took at least one Interim Assessment during the 2021–2022 school year; this represents an increase of 72 percent of districts, 31 percent of campuses participating in the interim assessments from the 2020–2021 school year, and 37 percent in the number of participating students. Appendix C: Test Participation, presents the numbers of participating students, campuses, and districts in the 2021–2022 and 2020–2021 school years. Table C.1 presents the numbers of participating students, campuses, and districts at each grade or end-of-course (EOC) assessment, and Table C.2 shows the same information by subject.
- The demographic characteristics of 2021–2022 Interim Assessment participants were generally consistent with the state’s student population in the same year. In 2021-2022 a review of interim participants’ demographics shows a lower percentage of Title I, Part A participants, a lower percentage of students with an economically disadvantaged status, and a higher percentage of At-Risk students compared to students who participated in 2020–2021. There were exceptions to these trends in grade 8 science, grade 8 social studies, and Spanish grade 5 science, where a higher percentage of Title I, Part A Participants were administered the interim assessments in the 2021-2022 school year than in the previous school year. In addition, in all the Spanish mathematics and reading tests, a slightly lower percentage of At-Risk students were

administered the interim compared to 2020-2021. Appendix D, Interim Participating Student Demographic Characteristics, presents the detailed participants' demographic characteristics for each Interim Assessment and their comparison with the 2020–2021 school year.

## Test Validity

The following information details the test validity of the STAAR Interim Assessments:

- Of the 2,420,801 Opportunity 2 interim assessments administered, the prediction accuracy of the interim test scores is 75 and 70 percent on the *Approaches* and *Meets* performance levels, respectively. Prediction accuracy is the percentage of the number of correctly predicted students to the total of students administered.
- Of the 1,120,463 Opportunity 1 interim assessments administered, the prediction accuracy is 73 and 70 percent on the *Approaches* and *Meets* performance levels, respectively.
- The interpretation of the Interim Assessment's prediction accuracy took the model assumptions and purposes of the Interim Assessment into consideration, as detailed in the Predicting the Probabilities of Reaching Each Performance Level on the Corresponding STAAR Assessment section in the [STAAR 2018–2019 Interim Assessment Technical Report](#).

## Appendix A: Interim Test Reliability

**Table A.1. Test Reliabilities**

Assessment	2021–2022 Interim		2020–2021 Interim		2022 STAAR
	Opportunity I	Opportunity II	Opportunity I	Opportunity II
