

TEKS Curriculum Framework for STAAR Alternate 2

Biology

STAAR Alternate 2 Science Instructional Terms

The curriculum that will be assessed each year for STAAR Alternate 2 is determined by the essence statements that are selected for each administration. Teachers should refer to the Curriculum Framework documents for each selected essence statement to locate the prerequisite skills that are linked to that essence statement. Instruction should focus on the listed prerequisite skills. The teacher should determine what skills have been mastered and which need to be taught according to the developmental level of the student. The goal should be to assist the student in attaining the highest academic level the student is capable of within a given year. In addition to the prerequisite skills, there are instructional terms that students will need exposure to during instruction. The following list includes the terms for all the essence statements and not just the ones selected for a given administration. Students need to become familiar with these terms as the student is developmentally able to comprehend the content. Students in higher grades need to also know the terms presented in earlier grades.

Grade 5 Science

universe: planets, moon, sun, stars, Earth	conserve/conserving	organism
states of matter: solid, liquid, gas	natural resources	living/non-living
physical properties: sphere, mass, magnetism, texture	land forms: valleys, canyons, mountains	developmental stages: young, adult
	water sources: streams, lakes, oceans	characteristics/parts: plant, animal
energy: heat, sound, light, mechanical	water cycle: precipitation, evaporation, condensation	habitat
nectar/pollen	absorb/absorption	seasons: climate, weather conditions
nutrients/nutrition	life cycles: larva, mature, seedling, pupa	survive

Grade 8 Science

mixture/solution	erosion	force
substance	ecosystem	pulley/inclined plane
strainer	food chain/food web/food source	harvested
environment	omnivore	friction
phase	migration, migrating	electricity/current
weathering	investigation	kilogram
mammals	thermal energy	beaker
bud		

Biology

metamorphosis/nymph	structures	cell, vacuole
traits	absorption, absorb	organ
inherited	hibernation	systems: circulatory, digestive, respiratory, nervous, skeletal, digestive
learned behaviors	flow of energy	
survival	producer/consumer	kingdom: plant (Plantae), animal (Animalia)
adaptations	interdependence	fungi (Fungi)
function	mutualistic relationship	plankton

STAAR Reporting Category 1 – Cell Structure and Function: The student will demonstrate an understanding of biomolecules as building blocks of cells, and that cells are the basic unit of structure and function of living things.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
<p>Biology (4) Science concepts. The student knows that cells are the basic structures of all living things with specialized parts that perform specific functions and that viruses are different from cells. The student is expected to</p> <p>(A) compare and contrast prokaryotic and eukaryotic cells; Supporting Standard</p> <p>(B) investigate and explain cellular processes, including homeostasis, energy conversions, transport of molecules, and synthesis of new molecules; Readiness Standard</p> <p>(C) compare the structures of viruses to cells, describe viral reproduction, and describe the role of viruses in causing diseases such as human immunodeficiency virus (HIV) and influenza. Readiness Standard</p>	<p>Knows that all living things are composed of cells that perform specific functions and that viruses are different from cells.</p>
Bio 4 Prerequisite Skills/Links to TEKS Vertical Alignment	
	<p><i>Organisms: Structure and Function of Living Systems</i></p> <ul style="list-style-type: none"> • recognize that according to cell theory all organisms are composed of cells and cells carry on similar functions such as extracting energy from food to sustain life • compare the functions of a cell to the functions of organisms such as waste removal • differentiate between structure and function in plant and animal cell organelles, including cell membrane, cell wall, nucleus, cytoplasm, mitochondrion, chloroplast, and vacuole • recognize levels of organization in plants and animals, including cells, tissues, organs, organ systems, and organisms • identify the main functions of the systems of the human organism, including the circulatory, respiratory, skeletal, muscular, digestive, excretory, reproductive, integumentary, nervous, and endocrine systems • recognize that the presence of a nucleus determines whether a cell is prokaryotic or eukaryotic • understand that all organisms are composed of one or more cells <p><i>Environment: Organisms’ Response to Their Environment</i></p> <ul style="list-style-type: none"> • describe and relate responses in organisms that may result from internal stimuli such as wilting in plants and fever or vomiting in animals that allow them to maintain balance • investigate how organisms respond to external stimuli found in the environment such as phototropism and fight or flight

Continued

Bio 4	Prerequisite Skills/Links to TEKS Vertical Alignment
	<p><i>Environment: Identify How Organisms Meet Their Basic Needs</i></p> <ul style="list-style-type: none"> • observe, record, and compare how the physical characteristics of plants help them meet their basic needs such as stems carry water throughout the plant • observe, record, and compare how the physical characteristics and behaviors of animals help them meet their basic needs such as fins help fish move and balance in the water • identify factors in the environment, including temperature and precipitation, that affect growth and behavior such as migration, hibernation, and dormancy of living things • identify the basic needs of plants and animals • identify and compare the parts of plants • sort and classify living and nonliving things based upon whether or not they have basic needs and produce offspring • identify parts of plants such as roots, stem and leaves and parts of animals such as head, eyes, and limbs • sort plants and animals into groups based on physical characteristics such as color, size, body covering, or leaf shape • examine evidence that living organisms have basic needs such as food, water, and shelter for animals and air, water, nutrients, sunlight, and space for plants • differentiate between living and nonliving things based upon whether they have basic needs and produce offspring <p>Personal safety and health skills</p> <ul style="list-style-type: none"> • identify good habits of nutrition and exercise • practice good habits of personal health and hygiene <p>Life sciences skills</p> <ul style="list-style-type: none"> • identify and describe the characteristics of organisms <p><i>Environment: Adaptations and Biological Evolution</i></p> <ul style="list-style-type: none"> • explore how short- and long-term environmental changes affect organisms and traits in subsequent populations • investigate and explain how internal structures of organisms have adaptations that allow specific functions such as gills in fish, hollow bones in birds, or xylem in plants • identify some changes in genetic traits that have occurred over several generations through natural selection and selective breeding such as the Galapagos Medium Ground Finch (<i>Geospiza fortis</i>) or domestic animals • explain variation within a population or species by comparing external features, behaviors, or physiology of organisms that enhance their survival such as migration, hibernation, or storage of food in a bulb • compare the structures and functions of different species that help them live and survive such as hooves on prairie animals or webbed feet in aquatic animals • explore how adaptations enable organisms to survive in their environment such as comparing birds' beaks and leaves on plants • explore how structures and functions of plants and animals allow them to survive in a particular environment • investigate how the external characteristics of an animal are related to where it lives, how it moves, and what it eats

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 1 – Cell Structure and Function: The student will demonstrate an understanding of biomolecules as building blocks of cells, and that cells are the basic unit of structure and function of living things.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
<p>Biology (5) Science concepts. The student knows how an organism grows and the importance of cell differentiation. The student is expected to</p> <p>(A) describe the stages of the cell cycle, including deoxyribonucleic acid (DNA) replication and mitosis, and the importance of the cell cycle to the growth of organisms; Readiness Standard</p> <p>(B) examine specialized cells, including roots, stems, and leaves of plants; and animal cells such as blood, muscle, and epithelium; Supporting Standard</p> <p>(C) describe the roles of DNA, ribonucleic acid (RNA), and environmental factors in cell differentiation; Supporting Standard</p> <p>(D) recognize that disruptions of the cell cycle lead to diseases such as cancer. Supporting Standard</p>	<p>Recognizes the importance of the cell cycle and cell differentiation to the growth of organisms.</p>
Bio 5 Prerequisite Skills/Links to TEKS Vertical Alignment	
	<p><i>Organisms: Structure and Function of Living Systems</i></p> <ul style="list-style-type: none"> • recognize that according to cell theory all organisms are composed of cells and cells carry on similar functions such as extracting energy from food to sustain life • compare the functions of a cell to the functions of organisms such as waste removal • differentiate between structure and function in plant and animal cell organelles, including cell membrane, cell wall, nucleus, cytoplasm, mitochondrion, chloroplast, and vacuole • recognize levels of organization in plants and animals, including cells, tissues, organs, organ systems, and organisms • identify the main functions of the systems of the human organism, including the circulatory, respiratory, skeletal, muscular, digestive, excretory, reproductive, integumentary, nervous, and endocrine systems • recognize that the presence of a nucleus determines whether a cell is prokaryotic or eukaryotic • understand that all organisms are composed of one or more cells <p><i>Organisms: Inherited Traits and Learned Behaviors</i></p> <ul style="list-style-type: none"> • differentiate between inherited traits of plants and animals such as spines on a cactus or shape of a beak and learned behaviors such as an animal learning tricks or a child riding a bicycle

Continued

Bio 5	Prerequisite Skills/Links to TEKS Vertical Alignment
	<ul style="list-style-type: none"> • demonstrate that some likenesses between parents and offspring are inherited, passed from generation to generation such as eye color in humans or shapes of leaves in plants. Other likenesses are learned such as table manners or reading a book and seals balancing balls on their noses • explore that some characteristics of organisms are inherited such as the number of limbs on an animal or flower color and recognize that some behaviors are learned in response to living in a certain environment such as animals using tools to get food • compare ways that young animals resemble their parents • identify ways that young plants resemble the parent plant <p><i>Organisms: Genetic Material and Its Role in Inheritance</i></p> <ul style="list-style-type: none"> • recognize that inherited traits of individuals are governed in the genetic material found in the genes within chromosomes in the nucleus • compare the results of uniform or diverse offspring from sexual reproduction or asexual reproduction • define heredity as the passage of genetic instructions from one generation to the next generation <p><i>Environment: Identify How Organisms Meet Their Basic Needs</i></p> <ul style="list-style-type: none"> • observe, record, and compare how the physical characteristics of plants help them meet their basic needs such as stems carry water throughout the plant • observe, record, and compare how the physical characteristics and behaviors of animals help them meet their basic needs such as fins help fish move and balance in the water • identify factors in the environment, including temperature and precipitation, that affect growth and behavior such as migration, hibernation, and dormancy of living things • identify the basic needs of plants and animals • identify and compare the parts of plants • sort and classify living and nonliving things based upon whether or not they have basic needs and produce offspring • identify parts of plants such as roots, stem and leaves and parts of animals such as head, eyes, and limbs • sort plants and animals into groups based on physical characteristics such as color, size, body covering, or leaf shape • examine evidence that living organisms have basic needs such as food, water, and shelter for animals and air, water, nutrients, sunlight, and space for plants • differentiate between living and nonliving things based upon whether they have basic needs and produce offspring <p>Personal safety and health skills</p> <ul style="list-style-type: none"> • identify good habits of nutrition and exercise • practice good habits of personal health and hygiene <p>Life sciences skills</p> <ul style="list-style-type: none"> • identify and describe the characteristics of organisms

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 1 – Cell Structure and Function: The student will demonstrate an understanding of biomolecules as building blocks of cells, and that cells are the basic unit of structure and function of living things.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
<p>Biology (9) Science concepts. The student knows the significance of various molecules involved in metabolic processes and energy conversions that occur in living organisms. The student is expected to</p> <p>(A) compare the structures and functions of different types of biomolecules, including carbohydrates, lipids, proteins, and nucleic acids; Readiness Standard</p> <p>(D) analyze and evaluate the evidence regarding formation of simple organic molecules and their organization into long complex molecules having information such as the DNA molecule for self-replicating life. Supporting Standard</p>	<p>Recognizes structures and functions of various biomolecules.</p>
Bio 9 Prerequisite Skills/Links to TEKS Vertical Alignment	
	<p><i>Environment: How Organisms Depend on Each Other and Their Environment</i></p> <ul style="list-style-type: none"> • recognize human dependence on ocean systems and explain how human activities such as runoff, artificial reefs, or use of resources have modified these systems • investigate how organisms and populations in an ecosystem depend on and may compete for biotic and abiotic factors such as quantity of light, water, range of temperatures, or soil composition • describe producer/ consumer, predator/ prey, and parasite/ host relationships as they occur in food webs within marine, freshwater, and terrestrial ecosystems • observe, record, and describe the role of ecological succession such as in a microhabitat of a garden with weeds • describe how biodiversity contributes to the sustainability of an ecosystem • observe and describe how different environments, including microhabitats in schoolyards and biomes, support different varieties of organisms • diagram the levels of organization within an ecosystem, including organism, population, community, and ecosystem • describe biotic and abiotic parts of an ecosystem in which organisms interact • identify the significance of the carbon dioxide-oxygen cycle to the survival of plants and animals • predict the effects of changes in ecosystems caused by living organisms, including humans, such as the overpopulation of grazers or the building of highways
<div style="border: 1px solid black; border-radius: 15px; padding: 2px 10px; display: inline-block;"><i>Continued</i></div>	

Bio 9**Prerequisite Skills/Links to TEKS Vertical Alignment**

- describe how the flow of energy derived from the Sun, used by producers to create their own food, is transferred through a food chain and food web to consumers and decomposers
- observe the way organisms live and survive in their ecosystem by interacting with the living and non-living elements
- describe the flow of energy through food webs, beginning with the Sun, and predict how changes in the ecosystem affect the food web such as a fire in a forest
- investigate that most producers need sunlight, water, and carbon dioxide to make their own food, while consumers are dependent on other organisms for food
- describe environmental changes such as floods and droughts where some organisms thrive and others perish or move to new locations
- identify and describe the flow of energy in a food chain and predict how changes in a food chain affect the ecosystem such as removal of frogs from a pond or bees from a field
- observe and describe the physical characteristics of environments and how they support populations and communities within an ecosystem
- compare and give examples of the ways living organisms depend on each other and on their environments such as food chains within a garden, park, beach, lake, and wooded area
- gather evidence of interdependence among living organisms such as energy transfer through food chains and animals using plants for shelter
- analyze and record examples of interdependence found in various situations such as terrariums and aquariums or pet and caregiver

Organisms: Structure and Function of Living Systems

- recognize that according to cell theory all organisms are composed of cells and cells carry on similar functions such as extracting energy from food to sustain life
- compare the functions of a cell to the functions of organisms such as waste removal
- differentiate between structure and function in plant and animal cell organelles, including cell membrane, cell wall, nucleus, cytoplasm, mitochondrion, chloroplast, and vacuole
- recognize levels of organization in plants and animals, including cells, tissues, organs, organ systems, and organisms
- identify the main functions of the systems of the human organism, including the circulatory, respiratory, skeletal, muscular, digestive, excretory, reproductive, integumentary, nervous, and endocrine systems
- recognize that the presence of a nucleus determines whether a cell is prokaryotic or eukaryotic
- understand that all organisms are composed of one or more cells

Environment: Identify How Organisms Meet Their Basic Needs

- observe, record, and compare how the physical characteristics of plants help them meet their basic needs such as stems carry water throughout the plant
- observe, record, and compare how the physical characteristics and behaviors of animals help them meet their basic needs such as fins help fish move and balance in the water

Continued

Bio 9	Prerequisite Skills/Links to TEKS Vertical Alignment
	<ul style="list-style-type: none"> • identify factors in the environment, including temperature and precipitation, that affect growth and behavior such as migration, hibernation, and dormancy of living things • identify the basic needs of plants and animals • identify and compare the parts of plants • sort and classify living and nonliving things based upon whether or not they have basic needs and produce offspring • identify parts of plants such as roots, stem and leaves and parts of animals such as head, eyes, and limbs • sort plants and animals into groups based on physical characteristics such as color, size, body covering, or leaf shape • examine evidence that living organisms have basic needs such as food, water, and shelter for animals and air, water, nutrients, sunlight, and space for plants • differentiate between living and nonliving things based upon whether they have basic needs and produce offspring <p>Personal safety and health skills</p> <ul style="list-style-type: none"> • identify good habits of nutrition and exercise • practice good habits of personal health and hygiene <p>Life sciences skills</p> <ul style="list-style-type: none"> • recognize, observe, and discuss the relationship of organisms to their environments • identify and describe the characteristics of organisms

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 2 – Mechanisms of Genetics: The student will demonstrate an understanding of the mechanisms of genetics.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
<p>Biology (6) Science concepts. The student knows the mechanisms of genetics, including the role of nucleic acids and the principles of Mendelian Genetics. The student is expected to</p> <p>(A) identify components of DNA, and describe how information for specifying the traits of an organism is carried in the DNA; Readiness Standard</p> <p>(B) recognize that components that make up the genetic code are common to all organisms; Supporting Standard</p> <p>(C) explain the purpose and process of transcription and translation using models of DNA and RNA; Supporting Standard</p> <p>(D) recognize that gene expression is a regulated process; Supporting Standard</p> <p>(E) identify and illustrate changes in DNA and evaluate the significance of these changes; Readiness Standard</p> <p>(F) predict possible outcomes of various genetic combinations such as monohybrid crosses, dihybrid crosses and non-Mendelian inheritance; Readiness Standard</p> <p>(G) recognize the significance of meiosis to sexual reproduction; Supporting Standard</p> <p>(H) describe how techniques such as DNA fingerprinting, genetic modifications, and chromosomal analysis are used to study the genomes of organisms. Supporting Standard</p>	<p>Recognizes that the structure of DNA determines the inherited traits in organisms.</p>
Bio 6 Prerequisite Skills/Links to TEKS Vertical Alignment	
Bio 6	<p><i>Organisms: Genetic Material and Its Role in Inheritance</i></p> <ul style="list-style-type: none"> • recognize that inherited traits of individuals are governed in the genetic material found in the genes within chromosomes in the nucleus • compare the results of uniform or diverse offspring from sexual reproduction or asexual reproduction • define heredity as the passage of genetic instructions from one generation to the next generation <p><i>Organisms: Life Cycles</i></p> <ul style="list-style-type: none"> • describe the differences between complete and incomplete metamorphosis of insects

Continued

Bio 6	Prerequisite Skills/Links to TEKS Vertical Alignment
	<ul style="list-style-type: none"> • explore, illustrate, and compare life cycles in living organisms such as butterflies, beetles, radishes, or lima beans • investigate and compare how animals and plants undergo a series of orderly changes in their diverse life cycles such as tomato plants, frogs, and lady bugs • investigate and record some of the unique stages that insects undergo during their life cycle • observe and record life cycles of animals such as a chicken, frog, or fish • observe changes that are part of a simple life cycle of a plant: seed, seedling, plant, flower, and fruit • describe life cycles of organisms <p><i>Environment: Adaptations and Biological Evolution</i></p> <ul style="list-style-type: none"> • explore how short- and long-term environmental changes affect organisms and traits in subsequent populations • investigate and explain how internal structures of organisms have adaptations that allow specific functions such as gills in fish, hollow bones in birds, or xylem in plants • identify some changes in genetic traits that have occurred over several generations through natural selection and selective breeding such as the Galapagos Medium Ground Finch (<i>Geospiza fortis</i>) or domestic animals • explain variation within a population or species by comparing external features, behaviors, or physiology of organisms that enhance their survival such as migration, hibernation, or storage of food in a bulb • compare the structures and functions of different species that help them live and survive such as hooves on prairie animals or webbed feet in aquatic animals • explore how adaptations enable organisms to survive in their environment such as comparing birds' beaks and leaves on plants • explore how structures and functions of plants and animals allow them to survive in a particular environment • investigate how the external characteristics of an animal are related to where it lives, how it moves, and what it eats <p><i>Organisms: Inherited Traits and Learned Behaviors</i></p> <ul style="list-style-type: none"> • differentiate between inherited traits of plants and animals such as spines on a cactus or shape of a beak and learned behaviors such as an animal learning tricks or a child riding a bicycle • demonstrate that some likenesses between parents and offspring are inherited, passed from generation to generation such as eye color in humans or shapes of leaves in plants. Other likenesses are learned such as table manners or reading a book and seals balancing balls on their noses • explore that some characteristics of organisms are inherited such as the number of limbs on an animal or flower color and recognize that some behaviors are learned in response to living in a certain environment such as animals using tools to get food • compare ways that young animals resemble their parents • identify ways that young plants resemble the parent plant

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 3 – Biological Evolution and Classification: The student will demonstrate an understanding of the theory of biological evolution and the hierarchical classification of organisms.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
<p>Biology (7) Science concepts. The student knows evolutionary theory is a scientific explanation for the unity and diversity of life. The student is expected to</p> <ul style="list-style-type: none"> (A) analyze and evaluate how evidence of common ancestry among groups is provided by the fossil record, biogeography, and homologies, including anatomical, molecular, and developmental; Readiness Standard (B) analyze and evaluate scientific explanations concerning any data of sudden appearance, stasis, and sequential nature of groups in the fossil record; Supporting Standard (C) analyze and evaluate how natural selection produces change in populations, not individuals; Supporting Standard (D) analyze and evaluate how the elements of natural selection, including inherited variation, the potential of a population to produce more offspring than can survive, and a finite supply of environmental resources, result in differential reproductive success; Supporting Standard (E) analyze and evaluate the relationship of natural selection to adaptation and to the development of diversity in and among species; Readiness Standard (F) analyze and evaluate the effects of other evolutionary mechanisms, including genetic drift, gene flow, mutation, and recombination; Supporting Standard (G) analyze and evaluate scientific explanations concerning the complexity of the cell. Supporting Standard 	<p>Knows evolutionary theory is a scientific explanation for the unity and diversity of life.</p>

Continued

Bio 7**Prerequisite Skills/Links to TEKS Vertical Alignment***Environment: Adaptations and Biological Evolution*

- explore how short- and long-term environmental changes affect organisms and traits in subsequent populations
- investigate and explain how internal structures of organisms have adaptations that allow specific functions such as gills in fish, hollow bones in birds, or xylem in plants
- identify some changes in genetic traits that have occurred over several generations through natural selection and selective breeding such as the Galapagos Medium Ground Finch (*Geospiza fortis*) or domestic animals
- explain variation within a population or species by comparing external features, behaviors, or physiology of organisms that enhance their survival such as migration, hibernation, or storage of food in a bulb
- compare the structures and functions of different species that help them live and survive such as hooves on prairie animals or webbed feet in aquatic animals
- explore how adaptations enable organisms to survive in their environment such as comparing birds' beaks and leaves on plants
- explore how structures and functions of plants and animals allow them to survive in a particular environment
- investigate how the external characteristics of an animal are related to where it lives, how it moves, and what it eats

Organisms: Life Cycles

- describe the differences between complete and incomplete metamorphosis of insects
- explore, illustrate, and compare life cycles in living organisms such as butterflies, beetles, radishes, or lima beans
- investigate and compare how animals and plants undergo a series of orderly changes in their diverse life cycles such as tomato plants, frogs, and lady bugs
- investigate and record some of the unique stages that insects undergo during their life cycle
- observe and record life cycles of animals such as a chicken, frog, or fish
- observe changes that are part of a simple life cycle of a plant: seed, seedling, plant, flower, and fruit
- describe life cycles of organisms

Environment: Identify How Organisms Meet Their Basic Needs

- observe, record, and compare how the physical characteristics of plants help them meet their basic needs such as stems carry water throughout the plant
- observe, record, and compare how the physical characteristics and behaviors of animals help them meet their basic needs such as fins help fish move and balance in the water
- identify factors in the environment, including temperature and precipitation, that affect growth and behavior such as migration, hibernation, and dormancy of living things
- identify the basic needs of plants and animals
- identify and compare the parts of plants
- sort and classify living and nonliving things based upon whether or not they have basic needs and produce offspring
- identify parts of plants such as roots, stem and leaves and parts of animals such as head, eyes, and limbs

Continued

Bio 7	Prerequisite Skills/Links to TEKS Vertical Alignment
	<ul style="list-style-type: none"> • sort plants and animals into groups based on physical characteristics such as color, size, body covering, or leaf shape • examine evidence that living organisms have basic needs such as food, water, and shelter for animals and air, water, nutrients, sunlight, and space for plants • differentiate between living and nonliving things based upon whether they have basic needs and produce offspring <p>Personal safety and health skills</p> <ul style="list-style-type: none"> • identify good habits of nutrition and exercise • practice good habits of personal health and hygiene <p><i>Environment: How Organisms Depend on Each Other and Their Environment</i></p> <ul style="list-style-type: none"> • recognize human dependence on ocean systems and explain how human activities such as runoff, artificial reefs, or use of resources have modified these systems • investigate how organisms and populations in an ecosystem depend on and may compete for biotic and abiotic factors such as quantity of light, water, range of temperatures, or soil composition • describe producer/ consumer, predator/ prey, and parasite/ host relationships as they occur in food webs within marine, freshwater, and terrestrial ecosystems • observe, record, and describe the role of ecological succession such as in a microhabitat of a garden with weeds • describe how biodiversity contributes to the sustainability of an ecosystem • observe and describe how different environments, including microhabitats in schoolyards and biomes, support different varieties of organisms • diagram the levels of organization within an ecosystem, including organism, population, community, and ecosystem • describe biotic and abiotic parts of an ecosystem in which organisms interact • identify the significance of the carbon dioxide-oxygen cycle to the survival of plants and animals • predict the effects of changes in ecosystems caused by living organisms, including humans, such as the overpopulation of grazers or the building of highways • describe how the flow of energy derived from the Sun, used by producers to create their own food, is transferred through a food chain and food web to consumers and decomposers • observe the way organisms live and survive in their ecosystem by interacting with the living and non-living elements • describe the flow of energy through food webs, beginning with the Sun, and predict how changes in the ecosystem affect the food web such as a fire in a forest • investigate that most producers need sunlight, water, and carbon dioxide to make their own food, while consumers are dependent on other organisms for food • describe environmental changes such as floods and droughts where some organisms thrive and others perish or move to new locations • identify and describe the flow of energy in a food chain and predict how changes in a food chain affect the ecosystem such as removal of frogs from a pond or bees from a field

Bio 10**Prerequisite Skills/Links to TEKS Vertical Alignment***Environment: Identify How Organisms Meet Their Basic Needs*

- observe, record, and compare how the physical characteristics of plants help them meet their basic needs such as stems carry water throughout the plant
- observe, record, and compare how the physical characteristics and behaviors of animals help them meet their basic needs such as fins help fish move and balance in the water
- identify factors in the environment, including temperature and precipitation, that affect growth and behavior such as migration, hibernation, and dormancy of living things
- identify the basic needs of plants and animals
- identify and compare the parts of plants
- sort and classify living and nonliving things based upon whether or not they have basic needs and produce offspring
- identify parts of plants such as roots, stem and leaves and parts of animals such as head, eyes, and limbs
- sort plants and animals into groups based on physical characteristics such as color, size, body covering, or leaf shape
- examine evidence that living organisms have basic needs such as food, water, and shelter for animals and air, water, nutrients, sunlight, and space for plants
- differentiate between living and nonliving things based upon whether they have basic needs and produce offspring

Personal safety and health skills

- identify good habits of nutrition and exercise
- practice good habits of personal health and hygiene

Environment: How Organisms Depend on Each Other and Their Environment

- recognize human dependence on ocean systems and explain how human activities such as runoff, artificial reefs, or use of resources have modified these systems
- investigate how organisms and populations in an ecosystem depend on and may compete for biotic and abiotic factors such as quantity of light, water, range of temperatures, or soil composition
- describe producer/ consumer, predator/ prey, and parasite/ host relationships as they occur in food webs within marine, freshwater, and terrestrial ecosystems
- observe, record, and describe the role of ecological succession such as in a microhabitat of a garden with weeds
- describe how biodiversity contributes to the sustainability of an ecosystem
- observe and describe how different environments, including microhabitats in schoolyards and biomes, support different varieties of organisms
- diagram the levels of organization within an ecosystem, including organism, population, community, and ecosystem
- describe biotic and abiotic parts of an ecosystem in which organisms interact
- identify the significance of the carbon dioxide-oxygen cycle to the survival of plants and animals
- predict the effects of changes in ecosystems caused by living organisms, including humans, such as the overpopulation of grazers or the building of highways

Scientific Process Standards: Scientific process standards will not be listed under a separate reporting category. These standards will be incorporated into assessment tasks in reporting categories 1–5 and identified along with content standards.

TEKS Knowledge and Skills Statement/STAAR-Tested Student Expectations

Biology (1) Scientific processes. The student, for at least 40% of instructional time, conducts laboratory and field investigations using safe, environmentally appropriate, and ethical practices. The student is expected to

- (A) demonstrate safe practices during laboratory and field investigations;
- (B) demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials.

Bio 1 Prerequisite Skills/Links to TEKS Vertical Alignment

Demonstrate Home and School Safety Practices

- use preventative safety equipment, including chemical splash goggles, aprons, and gloves, and be prepared to use emergency safety equipment, including an eye/ face wash, a fire blanket, and a fire extinguisher
- demonstrate safe practices during laboratory and field investigations as outlined in the Texas Safety Standards
- use safety equipment, including safety goggles and gloves
- demonstrate safe practices and the use of safety equipment as described in the Texas Safety Standards during classroom and outdoor investigations
- use safety equipment as appropriate, including safety goggles and gloves
- demonstrate safe practices as described in the Texas Safety Standards during classroom and outdoor investigations, including observing a schoolyard habitat
- describe the importance of safe practices
- recognize the importance of safe practices to keep self and others safe and healthy
- recognize and demonstrate safe practices as described in the Texas Safety Standards during classroom and outdoor investigations, including wearing safety goggles, washing hands, and using materials appropriately
- identify and demonstrate safe practices as described in the Texas Safety Standards during classroom and outdoor investigations, including wearing safety goggles, washing hands, and using materials appropriately
- discuss the importance of safe practices to keep self and others safe and healthy

Personal safety and health skills

- practice good habits of personal safety

Use and Conservation of School Resources and Laboratory Materials

- practice appropriate use and conservation of resources, including disposal, reuse, or recycling of materials
- make informed choices in the conservation, disposal, and recycling of materials
- make informed choices in the use and conservation of natural resources and reusing and recycling of materials such as paper, aluminum, glass, cans, and plastic

Continued

Bio 1	Prerequisite Skills/Links to TEKS Vertical Alignment
	<ul style="list-style-type: none">• make informed choices in the use and conservation of natural resources by recycling or reusing materials such as paper, aluminum cans, and plastics• identify and demonstrate how to use, conserve, and dispose of natural resources and materials such as conserving water and reuse or recycling of paper, plastic, and metal• identify and learn how to use natural resources and materials, including conservation and reuse or recycling of paper, plastic, and metals• demonstrate how to use, conserve, and dispose of natural resources and materials such as conserving water and reusing or recycling paper, plastic, and metal

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

Scientific Process Standards: Scientific process standards will not be listed under a separate reporting category. These standards will be incorporated into assessment tasks in reporting categories 1–5 and identified along with content standards.	
TEKS Knowledge and Skills Statement/STAAR-Tested Student Expectations	
<p>Biology (2) Scientific processes. The student uses scientific methods and equipment during laboratory and field investigations. The student is expected to</p> <ul style="list-style-type: none"> (A) know the definition of science and understand that it has limitations, as specified in Chapter 112.34, subsection (b)(2) of 19 TAC;* (B) know that hypotheses are tentative and testable statements that must be capable of being supported or not supported by observational evidence. Hypotheses of durable explanatory power which have been tested over a wide variety of conditions are incorporated into theories; (C) know scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are well-established and highly-reliable explanations, but they may be subject to change as new areas of science and new technologies are developed; (D) distinguish between scientific hypotheses and scientific theories; (E) plan and implement descriptive, comparative, and experimental investigations, including asking questions, formulating testable hypotheses, and selecting equipment and technology; (F) collect and organize qualitative and quantitative data and make measurements with accuracy and precision using tools such as calculators, spreadsheet software, data-collecting probes, computers, standard laboratory glassware, microscopes, various prepared slides, stereoscopes, metric rulers, electronic balances, gel electrophoresis apparatuses, micropipettors, hand lenses, Celsius thermometers, hot plates, lab notebooks or journals, timing devices, cameras, Petri dishes, lab incubators, dissection equipment, meter sticks, and models, diagrams, or samples of biological specimens or structures; (G) analyze, evaluate, make inferences, and predict trends from data; (H) communicate valid conclusions supported by the data through methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports. 	
Bio 2	Prerequisite Skills/Links to TEKS Vertical Alignment
	<p><i>Plan and Conduct Investigations</i></p> <ul style="list-style-type: none"> • design and implement comparative and experimental investigations by making observations, asking well-defined questions, formulating testable hypotheses, and using appropriate equipment and technology • plan and implement comparative and descriptive investigations by making observations, asking well-defined questions, and using appropriate equipment and technology

*Chapter 112.34, Subsection (b)(2) of 19 TAC; Nature of Science. Science, as defined by the National Academy of Sciences, is the "use of evidence to construct testable explanations and predictions of natural phenomena, as well as the knowledge generated through this process." This vast body of changing and increasing knowledge is described by physical, mathematical, and conceptual models. Students should know that some questions are outside the realm of science because they deal with phenomena that are not scientifically testable.

Bio 2	Prerequisite Skills/Links to TEKS Vertical Alignment
	<ul style="list-style-type: none"> • design and implement experimental investigations by making observations, asking well-defined questions, formulating testable hypotheses, and using appropriate equipment and technology • ask well-defined questions, formulate testable hypotheses, and select and use appropriate equipment and technology • describe, plan, and implement simple experimental investigations testing one variable plan and implement descriptive investigations, including asking well-defined questions, making inferences, and selecting and using appropriate equipment or technology to answer his/ her questions • plan and implement descriptive investigations, including asking and answering questions, making inferences, and selecting and using equipment or technology needed, to solve a specific problem in the natural world • plan and conduct descriptive investigations such as how organisms grow • ask questions about organisms, objects, and events during observations and investigations • plan and conduct simple descriptive investigations such as ways objects move • ask questions about organisms, objects, and events observed in the natural world <p><i>Gather Information</i></p> <ul style="list-style-type: none"> • use appropriate tools to collect, record, and analyze information, including lab journals/ notebooks, beakers, meter sticks, graduated cylinders, anemometers, psychrometers, hot plates, test tubes, spring scales, balances, microscopes, thermometers, calculators, computers, spectrosopes, timing devices, and other equipment as needed to teach the curriculum • use appropriate tools to collect, record, and analyze information, including life science models, hand lens, stereoscopes, microscopes, beakers, Petri dishes, microscope slides, graduated cylinders, test tubes, meter sticks, metric rulers, metric tape measures, timing devices, hot plates, balances, thermometers, calculators, water test kits, computers, temperature and pH probes, collecting nets, insect traps, globes, digital cameras, journals/ notebooks, and other equipment as needed to teach the curriculum • collect and record data using the International System of Units (SI) and qualitative means such as labeled drawings, writing, and graphic organizers • use appropriate tools to collect, record, and analyze information, including journals/ notebooks, beakers, Petri dishes, meter sticks, graduated cylinders, hot plates, test tubes, triple beam balances, microscopes, thermometers, calculators, computers, timing devices, and other equipment as needed to teach the curriculum • collect, record, and analyze information using tools, including calculators, microscopes, cameras, computers, hand lenses, metric rulers, Celsius thermometers, prisms, mirrors, pan balances, triple beam balances, spring scales, graduated cylinders, beakers, hot plates, meter sticks, magnets, collecting nets, and notebooks; timing devices, including clocks and stopwatches; and materials to support observations of habitats of organisms such as terrariums and aquariums • collect information by detailed observations and accurate measuring • collect, record, and analyze information using tools, including calculators, microscopes, cameras, computers, hand lenses, metric rulers, Celsius thermometers, mirrors, spring scales, pan balances, triple beam balances, graduated cylinders, beakers, hot plates, meter sticks, compasses, magnets, collecting nets, and notebooks; timing devices, including clocks and stopwatches; and materials to support observation of habitats of organisms such as terrariums and aquariums

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

Scientific Process Standards: Scientific process standards will not be listed under a separate reporting category. These standards will be incorporated into assessment tasks in reporting categories 1–5 and identified along with content standards.

TEKS Knowledge and Skills Statement/STAAR-Tested Student Expectations

Biology (3) Scientific processes. The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom. The student is expected to

- (A) in all fields of science, analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing, including examining all sides of scientific evidence of those scientific explanations, so as to encourage critical thinking by the student;
- (B) communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials;
- (C) draw inferences based on data related to promotional materials for products and services;
- (D) evaluate the impact of scientific research on society and the environment;
- (E) evaluate models according to their limitations in representing biological objects or events;
- (F) research and describe the history of biology and contributions of scientists.

Bio 3

Prerequisite Skills/Links to TEKS Vertical Alignment

Organize Information

- construct tables and graphs, using repeated trials and means, to organize data and identify patterns
- construct appropriate simple graphs, tables, maps, and charts using technology, including computers, to organize, examine, and evaluate information
- construct simple tables, charts, bar graphs, and maps using tools and current technology to organize, examine, and evaluate data
- construct maps, graphic organizers, simple tables, charts, and bar graphs using tools and current technology to organize, examine, and evaluate measured data
- compare results of investigations with what students and scientists know about the world

Analyze Evidence and Communicate Conclusions

- analyze data to formulate reasonable explanations, communicate valid conclusions supported by the data, and predict trends
- communicate valid conclusions in both written and verbal forms
- analyze and interpret information to construct reasonable explanations from direct (observable) and indirect (inferred) evidence
- communicate valid, oral, and written results supported by data
- perform repeated investigations to increase the reliability of results
- analyze data and interpret patterns to construct reasonable explanations from data that can be observed and measured
- in all fields of science, analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing, including examining all sides of scientific evidence of those scientific explanations, so as to encourage critical thinking by the student
