Introduction

TREx is a web-based application using an Extensible Markup Language (XML) schema, which is a defined structure based on standard tag-based formatting instructions. XML applications work with a schema to allow institutions to transfer data in a format (extract file) that will be understood between varying applications.

An XML schema is comprised of elements, also known as data elements. Elements can be blank, required, or optional as specified by the schema. Elements also can be repeated if declared in the schema. An example of this type of data element is a course grade. Other elements can be limited to a single instance by the schema. An example of this type of data element is the student name.

Data Elements

Data elements that are shown as coded, refer to enumerated values for data types within the schema, which is similar to using a code table. These are included in or defined as part of an XML Simple Type. To reuse common data elements (such as Address, City, StateProvince and PostalCode), simple types are grouped within a Complex Type. A data element is further defined by the related complex type within the schema.

A legend of the information found on each data element definition follows:

Information	Description	
Common Name	Common name of the element, many of which follow PEIMS and AAR standards	
XML Name	XML name or tag for the data element as found in the XML schema	
Complex Type	Name of the related XML complex type as found in the XML schema	
Definition	Meaning of the data element	
Special Instructions	Additional information or edit criteria for the data element, when applicable	
Element ID	Unique ID assigned to the TREx data element and formatted as TE (Reference to PEIMS data element number in the form "E" is included if applicable.)	
Code Table ID	Unique ID assigned to the TREx code table and formatted as TC (Reference to a PEIMS code table that includes the same codes for this data element in the form "C" is included if applicable.)	
Required?	Indication whether the field is required or optional	
	Yes - the element is required; if the requirement is only for specific grade levels, this is noted; NA may be entered if data are not available/applicable	
	 No - the element is optional and may be left blank unless specified otherwise in an edit or validation rule 	
	Note: If a field is shown as not required but data are available and relevant to the accuracy and completeness of the student record or transcript, it is the responsibility of the campus to include these data. Examples include indicators for ESL, Bilingual, GT, CTE, At Risk, Title I Part A, Special Education, IEP, Personal Graduation Plan, Migrant, and Homeless.	
Domain of Values	The acceptable values for the data element

TREx Code Tables

Data elements that are shown as coded are included in or defined as part of an XML Simple Type. To reuse common data elements (such as Address, City, StateProvince and PostalCode), simple types are grouped under a Complex Type. A data element is further defined by the related complex type within the schema.

Following is a legend for the information found in each code table.

Information	Description
Table ID	TREx unique Code Table ID number
Name	Common name of the coded data
XML Name	The XML name or tag as shown in the schema
Simple Type & Applicable Record	Simple Type association as shown in the schema and indication of data relationship to Student Record and/or AAR Transcript
Table ID	TREx unique table ID. If a related PEIMS Table exists, it is shown in parentheses.
Code	A string of characters that represent the translation
Translation	Meaning of the code values

In this document, the code table is either appended to the data element table or it is at the back of the document.

Data Elements

ACADEMIC-YEAR	SchoolYear	AcademicSessionType
Definition		

ACADEMIC-YEAR indicates a school year, for example 2007-2008. Based on the related complex type, this can be either the current school year or the school year in which coursework was completed by the student.

Special Instructions

FOSTER-CARE-INDICATOR-CODE	FosterCare	StudentDemographicType		
Definition				

FOSTER-CARE-INDICATOR-CODE indicates whether a student is in the conservatorship of the Department of Family and Protective Services (DFPS) currently, or for certain students that were previously in the conservatorship of DFPS.

Special Instructions

Foster Care status should be handled with the utmost sensitivity and in accordance with all FERPA guidelines. Foster Care status is included as a part of the TREx records transfer to aid supportive and smooth school transitions. Each school district and open-enrollment charter is required to appoint a foster care liaison to facilitate successful enrollment and transfers for students in foster care (TEC 33.904). Additionally, there are a number of statutory requirements specifically for students in Texas Department of Family and Protective Services (DFPS) conservatorship, 'foster care'. This information is provided to support districts in advancing the educational achievement of students. Ensuring that students benefit from these provisions, receive additional support, if needed, and experience a positive-supportive school environment is important.

In some instances a student may return home or find a permanent placement during the school year and therefore **no-longer** be in 'foster care' although it is indicated on the student's TREx academic record at the time of transfer during that school year. Please handle all foster care information with extreme sensitivity. It is important that all students, regardless if the student is currently or was previously in the conservatorship of the DFPS, receive appropriate, sensitive and timely services to advance their educational progress.
