

Developing an Engineering Design Challenge

STEM professions require individuals to apply their content knowledge to unique circumstances and to solve problems using creativity and innovation. When engineers are presented with a problem, they research to determine if the problem has occurred before (language arts connection) and what innovations have been made in the past (historical connection). Then, the engineer will use engineering practices to develop a solution that applies science and math knowledge. Engineering design challenges can be created for a specific standard or aligned with multiple standards and subject areas. [Cross-disciplinary instruction](#) introduces concepts and skills that could be linked from two or more disciplines to highlight connections and deepen understanding. Integrated learning can help students see the connection across content areas and braid that understanding together to create a solution to a problem using the engineering design process.

Purpose of this Tool:

This tool supports educators in developing cross-curricular engineering design challenges anchored in the science standards. While engineering practices are embedded in the Texas Essential Knowledge and Skills (TEKS) for science, engineering design challenges can draw from multiple subject areas. By integrating content across disciplines, students apply their knowledge in meaningful ways to solve a real-world problem.

This tool includes the following components:

1. A graphic organizer to identify targeted standards
2. A content crosswalk to help educators identify potential connections for an engineering design challenge
3. STEM career highlights for each student expectation

Engineering Design Practices:

When developing an engineering design challenge, it is important to anchor the challenge in TEKS. The students will use the engineering practices TEKS paired with the science content TEKS when solving the engineering design challenge. The first strand in the science TEKS outlines the scientific and engineering practices for the grade level/courses. Engineering practices refer to the methods, techniques, and standards that engineers use to ensure their work is efficient, reliable, safe, and meets the intended requirements. To create a cohesive learning experience, educators should integrate scientific and engineering practices with content. Embedding these practices across the content areas as part of engineering design challenges provides students with the context in which to ask questions, develop models, and analyze data that supports critical thinking and problem-solving skills in real-world scenarios.

Developing an Engineering Design Challenge (Grade 2)

Engineering Design Process:

The [engineering design process](#) is a systematic way of thinking, used to teach and apply concepts and skills in an integrated manner. Students engage with concepts from multiple disciplines while using design thinking to develop a solution to an open-ended, authentic problem. Learning from failure is a natural part of the iterative process. There are numerous engineering design process models; however, they share foundational practices that include identifying questions or defining problems, imagining solutions, brainstorming ideas, planning, creating, testing, and improving a design.

Engineering-Related TEKS:

In grade 2 science, the following engineering practices can be paired with engineering design challenges. The student is expected to:

- Science.2.1.A ask questions and define problems based on observations or information from text, phenomena, models, or investigations
- Science.2.1.B use scientific practices to plan and conduct simple descriptive investigations and use engineering practices to design solutions to problems
- Science.2.1.G develop and use models to represent phenomena, objects, and processes or design a prototype for a solution to a problem
- Science.2.2.D evaluate a design or object using criteria to determine if it works as intended
- Science.2.4.A explain how science or an innovation can help others
- Science.2.4.B identify scientists and engineers such as Alexander Graham Bell, Marie Daly, Mario Molina, and Jane Goodall and explore what different scientists and engineers do
- Science.2.5.A identify and use patterns to describe phenomena or design solutions

Communication is also part of the engineering design process. [Claim-Evidence-Reasoning \(CER\)](#) is a discussion structure commonly used by scientists and engineers to engage in collaborative discussions with peers. While both scientists and engineers use the CER structure, they use it for different purposes. Scientists tend to focus on asking questions and analyzing patterns, while engineers tend to focus on solving problems. The following student expectations demonstrate the knowledge and skills students apply to communicate their thinking. The student is expected to:

- Science.2.3.A develop explanations and propose solutions supported by data and models
- Science.2.3.B communicate explanations and solutions individually and collaboratively in a variety of settings and formats
- Science.2.3.C listen actively to others' explanations to identify important evidence and engage respectfully in scientific discussion

Developing an Engineering Design Challenge (Grade 2)

Component 1: Integration Planning Graphic Organizer

The *Integration Planning Graphic Organizer* can be used in conjunction with the Integrated Content Crosswalk for STEM Education to organize the standards and subject areas incorporated into an engineering design challenge. The graphic organizer serves as a workspace to capture ideas of possible connections, but not all spaces need to be filled. Many factors will influence the selection of standards during an engineering design challenge. Instructional materials, district scope and sequences, student age, and other factors that inform instructional decisions are some examples.

On the next page is an example of a grade 5 science engineering design challenge developed using the components of this tool. In this example, the graphic organizer has been completed with information from the Integrated Content Crosswalk for STEM Education. There are many ways to approach developing an engineering design challenge. An easy way to start is to select your science content standard, then identify the problem that needs to be solved, and what engineering practices will be used when solving the problem. The highlighted standard below is the content standard used as an anchor for this challenge. The engineering practices that align with this challenge are Science.5.1.G and Science.5.4.A.

Highlighted Standards from the Example:

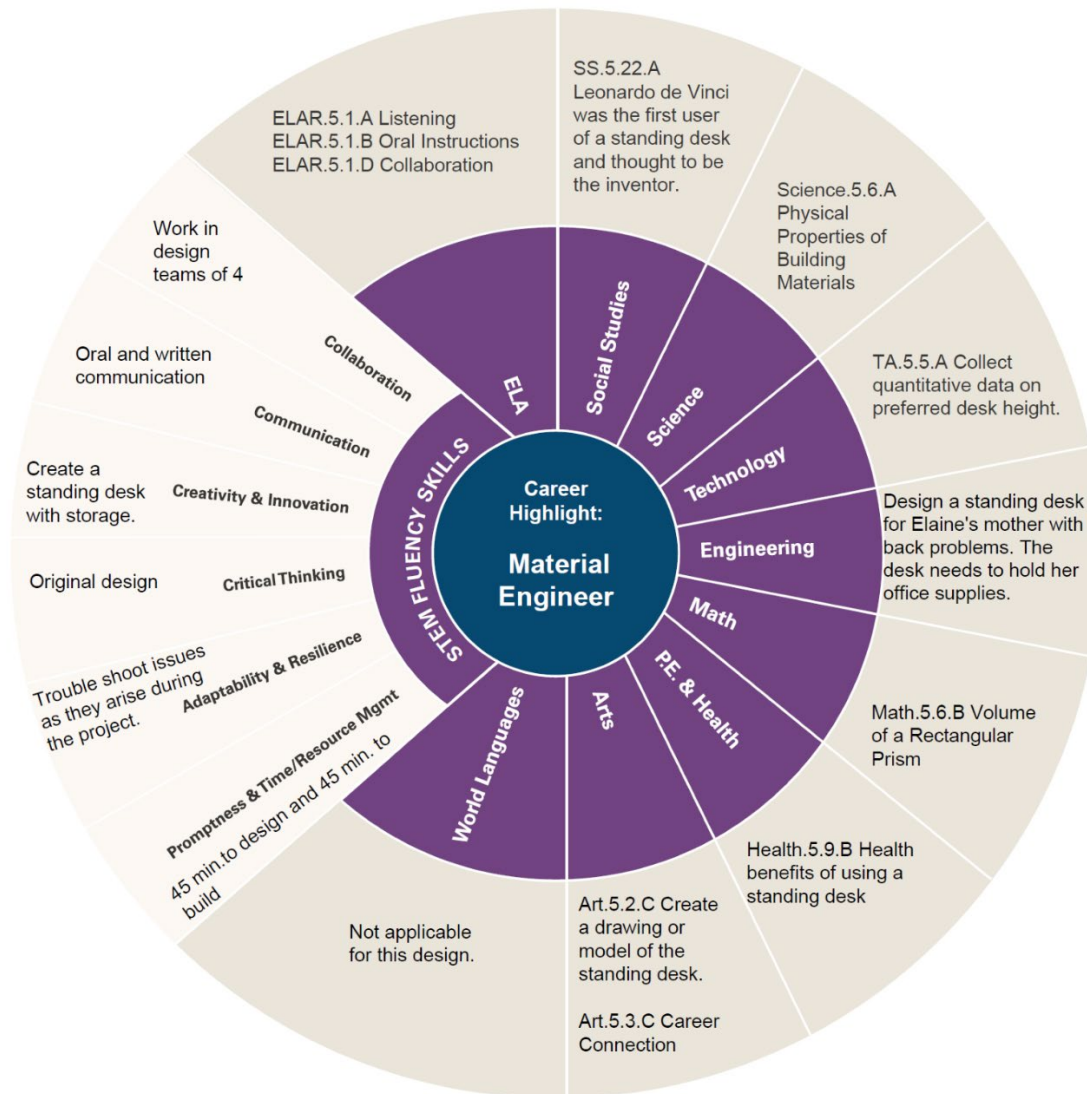

The student is expected to:

Science.5.6.A compare and contrast matter based on measurable, testable, or observable physical properties, including mass, magnetism, relative density (sinking and floating using water as a reference point), physical state (solid, liquid, gas), volume, solubility in water, and the ability to conduct or insulate thermal energy and electric energy

Science.5.1.G develop and use models to represent phenomena, objects, and processes or design a prototype for a solution to a problem

Science.5.4.A how scientific discoveries and innovative solutions to problems impact science and society

Developing an Engineering Design Challenge (Grade 2)

Engineering Design Challenge: Design a standing desk for Elaine's mother who has back problems. The desk needs to hold her office supplies.

Core Subject Area Connection Summary:

Science.5.6.A Compare and contrast physical properties of building materials

Math.5.6.B Calculate the volume of the standing desk (Rectangular Prism)

SS.5.22.A Read about Leonardo de Vinci who was the first user of a standing desk and thought to be the inventor

ELAR TEKS Support the STEM Fluency Skills:

ELAR.5.1.A and 5.1.B Listen to others and provide oral Instructions (Communication)

ELAR.5.1.D Work in groups (Collaboration)

Enrichment Area Connection Summary:

TA.5.5.A Collect quantitative data on preferred desk height

Health.5.9.B Identify health benefits of using a standing desk

Art.5.2.C Create a drawing or model of the standing desk

Developing an Engineering Design Challenge (Grade 2)

Component 2: Integrated Content Crosswalk for STEM Education

The Integrated Content Crosswalk for STEM Education section is a resource designed to help teachers identify connections between student expectations across the required curricula. It is important to note that this tool offers suggestions. Educators may use the suggestions in the crosswalk as a starting place for selecting student expectations across disciplines for an engineering design challenge. Student expectations in an integrated content crosswalk will vary and should align with the design challenge. The [Integration Planning Graphic Organizer](#) example provided for grade 5 includes the student expectations from the crosswalk, as well as additional standards from health and art. The boxes on the chart excerpt below indicate the student expectations that were used in the previous example on the graphic organizer.

In a STEM career, professionals must communicate throughout a design process. Students will practice language skills during engineering design challenges by using written and oral communication, research, questioning, and synthesizing information. Students may also use technology to create, develop, and communicate their ideas. The standards aligned to each project will change depending on what students are doing in the design challenge.

Science Student Expectation	Math Connection	Social Studies Connection	Reading Language Arts Connection	Technology Applications Connection
<p>Science.5.6.A compare and contrast matter based on measurable, testable, or observable physical properties, including mass, magnetism, relative density (sinking and floating using water as a reference point), physical state (solid, liquid, gas), volume, solubility in water, and the ability to conduct or insulate thermal energy and electric energy</p> <p>Career Highlights: Materials Engineers, Machinists, Service Unit Operators</p>	<p>Math.5.1.E create and use representations to organize, record, and communicate mathematical ideas</p> <p>Math.5.6.A recognize a cube with side length of one unit as a unit cube having one cubic unit of volume and the volume of a three-dimensional figure as the number of unit cubes (n cubic units) needed to fill it with no gaps or overlaps if possible</p> <p>Math.5.6.B determine the volume of a rectangular prism with whole number side lengths in problems related to the number of layers times the number of unit cubes in the area of the base</p>	<p>SS.5.22.A identify the accomplishments of notable individuals in the fields of science and technology such as Benjamin Franklin and Thomas Edison</p>	<p>ELAR.5.1.B follow, restate, and give oral instructions that include multiple action steps</p> <p>ELAR.5.1.D work collaboratively with others to develop a plan of shared responsibilities</p> <p>ELAR.5.13.A generate questions on a topic for formal and informal inquiry</p>	<p>TA.5.5.A identify and collect quantitative and qualitative data with digital tools</p>

Developing an Engineering Design Challenge (Grade 2)

Component 3: Career Highlights

The career highlights section is listed below each science student expectation in the Integrated Content Crosswalk for STEM Education. The career highlights are designed to provide career connections to the science content being taught. On the *Integrated Content Crosswalk*, each science standard has three career connections that support the incorporation of scientific and engineering practices for investigating STEM careers. The careers highlighted use the science content regularly by STEM professionals in their careers. The career highlights show science content that is regularly used by STEM professionals in the identified careers. The [Texas Workforce Commission](#) and [O*NET](#) provide the labor data information. Connecting engineering design challenges to careers promotes career awareness and provides relevance for learning content.

Getting Started:

To begin developing your own cross-curricular engineering design challenge, start by selecting a science content standard that aligns with your instructional goals. Use the Integration Planning Graphic Organizer in conjunction with the Integrated Content Crosswalk for STEM Education to identify meaningful connections across subject areas and incorporate relevant student expectations. Consider which engineering practices will be used to solve the real-world problem presented in the engineering design challenge. Leverage the career highlights to introduce students to STEM professions and make learning more relevant. As you plan, remember to adapt this tool to fit your students' needs, available resources, and instructional context.

Developing an Engineering Design Challenge (Grade 2)

Integrated Content Crosswalk for STEM Education and Career Highlights:

Science Student Expectation	Math Connection	Social Studies Connection	Reading Language Arts Connection	Technology Applications Connection
<p>Science.2.6.A classify matter by observable physical properties, including texture, flexibility, and relative temperature, and identify whether a material is a solid or liquid</p> <p>Career Highlights: Materials Engineers, Machinists, Service Unit Operators</p>	<p>Math.2.8.B classify and sort three-dimensional solids, including spheres, cones, cylinders, rectangular prisms (including cubes as special rectangular prisms), and triangular prisms, based on attributes using formal geometric language</p> <p>Math.2.8.C classify and sort polygons with 12 or fewer sides according to attributes, including identifying the number of sides and number of vertices</p>	<p>SS.2.4.A identify major landforms and bodies of water, including each of the seven continents and each of the oceans, on maps and globes</p>		<p>TA.2.5.A identify and collect non-numerical data, such as weather patterns, preferred reading genres, and holidays</p>

Developing an Engineering Design Challenge (Grade 2)

Science Student Expectation	Math Connection	Social Studies Connection	Reading Language Arts Connection	Technology Applications Connection
<p>Science.2.6.B conduct a descriptive investigation to explain how physical properties can be changed through processes such as cutting, folding, sanding, melting, or freezing</p> <p>Career Highlights: Materials Engineers, Machinists, Welders, Cutters, Solderers, and Brazers</p>	<p>Math.2.1.A apply mathematics to problems arising in everyday life, society, and the workplace</p> <p>Math.2.1.B use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution</p>		<p>ELAR.2.13.B develop and follow a research plan with adult assistance</p> <p>ELAR.2.1.D work collaboratively with others by following agreed-upon rules for discussion, including listening to others, speaking when recognized, making appropriate contributions, and building on the ideas of others</p>	<p>TA.2.1.A identify and communicate a problem or task and break down (decompose) multiple solutions into sequential steps</p> <p>TA.2.1.C analyze a plan with adult assistance that outlines the steps needed to complete a task</p> <p>TA.2.5.A identify and collect non-numerical data, such as weather patterns, preferred reading genres, and holidays</p>
<p>Science.2.6.C demonstrate that small units such as building blocks can be combined or reassembled to form new objects for different purposes and explain the materials chosen based on their physical properties</p> <p>Career Highlights: Materials Engineers, Civil Engineering, and Transportation Engineers</p>	<p>Math.2.1.G display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication</p> <p>Math.2.3.B explain that the more fractional parts used to make a whole, the smaller the part; and the fewer the fractional parts, the larger the part</p> <p>Math.2.8.D compose two-dimensional shapes and three-dimensional solids with given properties or attributes</p>	<p>SS.2.5.A identify ways in which people have modified the physical environment such as clearing land, building roads, using land for agriculture, and drilling for oil</p>	<p>ELAR.2.13.A generate questions for formal and informal inquiry with adult assistance</p>	
<p>Science.2.7.A explain how objects push on each other and</p>			<p>ELAR.2.13.E demonstrate understanding of information gathered</p>
