**Citation.** Texas Education Agency. 2000. 1999 and 1998 Advanced Placement and International Baccalaureate Examination Results in Texas. Publication Number GE00-601-05. Austin, TX: Texas Education Agency.

**Abstract.** The participation and performance of 11th and 12th grade Texas public school district students in the College Board's Advanced Placement (AP) and International Baccalaureate (IB) Organisation's IB courses and examinations through the 1998-99 school year was investigated. Both the number of Texas AP and IB examinees was higher than in previous years, as well as the number of schools with AP examinees. Participation rates for African Americans and especially for Hispanics in the past two years continued to climb but still lagged behind those for Whites and Asian Americans, while the rate for females continued rising faster than that for males. Performance as measured by number of AP examinations in the 3-5 score range and number of IB examinations in the 4-7 range was highest in 1999, improving steadily since 1995 for AP and since 1996 for IB. Performance as measured by the percentage of AP examinations in the 3-5 score range declined from 60.6 percent in 1996 to 55.0 percent in 1999, partly due to the rapid increase in the number of AP examinees. Asian American and White students continued to outscore African Americans and Hispanics on AP and IB examinations. Comparisons of AP results to other states and the nation were also drawn for all Texas public and non-public school students. The dramatic increase in state funding for the Texas AP/IB Incentive Program in the 2000-01 biennium, as well as funding available through federal and local incentive programs, should provide many necessary supports for substantially increasing the number of Texas high school students taking AP and IB courses and examinations.

## PREFACE

---

This second report updates through the last two years—1999 and 1998—results of Texas public school district students on the College Board’s Advanced Placement (AP) and International Baccalaureate (IB) Organisation’s IB examinations. Yearly reports, describing course and examination participation and examination performance during the previous school year, as well as selected trends, are planned. In this report, comparisons of AP results also were made among all examinees (from both public and non-public schools) in Texas, the nation, and other states. Growth in the number of examinees, especially AP examinees, has been increasingly more rapid since 1994-95—the year legislation partially funding the Texas AP (now AP/IB since 1995-96) Incentive Program went into effect.

In 1996, AP performance and participation data was adopted as a report-only indicator for the Academic Excellence Indicator System (AEIS) by the State Board of Education. In 1998, this indicator was defined and reported as the unduplicated, or combined, AP and IB participation (one measure) and performance (two measures) for both examinations and examinees at the district, region, and state levels (cf. TEA, 1999d). In most cases (excepting the nine and eight districts statewide with both AP and IB participation in 1998 and 1999, respectively), the indicator represents AP participation and performance only.

---

# ACKNOWLEDGMENTS

---

This report was prepared by the Texas Education Agency's (TEA's) Research and Evaluation Division to promote understanding of the extent to which the College Board's Advanced Placement (AP) and the International Baccalaureate (IB) Organisation's IB programs of courses and examinations can benefit students, their teachers, and the colleges and universities they attend. By focusing on AP and IB examination results, information is provided that, in large part, can be used in evaluating how well potential benefits of the two programs are being realized statewide, as well as between and within schools and districts.

A debt of gratitude is owed to Educational Testing Service staff for providing the College Board's Texas public high school AP examination data and to IBO staff in Cardiff, Wales, Great Britain for the Texas public high school IB examination data. These data were used in many of the report's analyses. In addition, staff in the College Board's Southwestern Regional Office, the IBO's North American Office, and in TEA's Advanced Academic Services Division facilitated or contributed by providing necessary information for the report or with feedback on the document in draft.

## EXECUTIVE SUMMARY

---

In 1998-99, 51,228 students in 971 Texas schools (public and non-public) took 88,485 Advanced Placement (AP) examinations, according to College Board reports. This put Texas *third* in the nation, behind California and New York, in the number of AP examinees and examinations. Texas, at 60.7 percent, also was above the nation (56.0%) in the percentage of schools with AP examinees. Although there have been increasing numbers of Texas students taking AP examinations since 1986-87, the numbers began rising at an even more rapid rate in 1994-95, the year legislation partially funding the Texas AP (now AP/IB) Incentive Program went into effect. (Funding also applies to International Baccalaureate, or IB, examinations effective from 1995-96.)

While the percentage of AP examination scores of 3, 4, or 5 earned by Texas students has remained below the national percentage since 1994-95, the *number* of examinations scored 3-5 rose to its highest value yet in 1998-99. In 1999, Texas students scored 3 or higher on 49,721 AP examinations—56.2 percent of all examinations taken. Nationally, 63.5 percent of examinations had scores of 3 or higher. Generally, colleges will award students credit, advanced placement, or both upon enrollment for scores of 3, 4, or 5 on AP examinations in corresponding college courses. Thus, *a greater number of Texas students in 1999 than ever before had a greater number of AP examination scores than ever before* that qualified potentially for college course placement or credit.

Similarly, but on a much smaller scale, 714 Grade 11-12 students in 10 Texas public schools took 1,793 of the International Baccalaureate Organisation's IB examinations in 1998-99, according to Texas Education Agency (TEA) analyses of IB data. These numbers are up somewhat from 1994-95, when 429 students in 11 Texas public schools took 910 IB examinations. Texas students earned scores of 4, 5, 6, or 7 on 83.7 percent (1,500) of 1,793 examinations taken in 1998-99—up from 74.7 percent (or 680 examinations) in 1994-95. In colleges that recognize IB scores, students generally are awarded credit or advanced placement in corresponding college courses for IB scores of 4-7.

More schools and districts are participating in the AP programs, and more students are taking the AP and IB examinations and making high scores, especially for AP. Noticeably more students are also completing AP courses. Taken together, these trends should contribute ultimately to increases in the number of Texas graduates who complete the more difficult course requirements of the Recommended and Distinguished Achievement high school diploma programs.

While the *most important* factor is whether or not students in AP or IB courses are experiencing subject-specific, college-level learning, performance on the AP and IB examinations is the result of objective, external, standardized measurement of how well students are likely to perform in the same courses taken in college. The quality and rigor of the advanced courses, the effectiveness of the teaching, and increased student access to the AP or IB courses and examinations must be combined before these important college-level learning experiences can occur. Funding available through state, federal, and local incentive programs can help in providing some of the supports necessary for an increasing number of high school students to experience such high-level academic learning.

---

# TEXAS PUBLIC SCHOOL HIGHLIGHTS

---

- From 1995 to 1999, the percentage of 11th- and 12th-graders in Texas public schools taking AP examinations rose from 6.8 percent to 10.9 percent. The trend for combined AP and IB examination participation was just one-tenth of a percentage point higher than for AP participation alone, rising from 8.6 percent in 1997 to 11.0 percent in 1999.
- The percentage of AP examinees and examinations with scores of 3-5 slipped from 1998 to 1999 by less than 2 percentage points—from 59.3 to 58.3 percent for examinees and from 56.9 to 55.0 percent for examinations. Including IB examinees and examinations with scores of 4-7 with the AP scores of 3-5 increased the 1999 percentages meeting the AP or IB score criteria to 58.6 percent for examinees and 55.7 percent for examinations. The percentage of Texas IB examinees earning scores of 4-7 went up almost 4 percentage points from 88.2 percent in 1998 to 92.0 percent in 1999; the percentage of examinations with scores of 4-7 rose from 80.5 to 83.7 percent.
- Grade 9-12 AP examinees who also completed at least one AP course rose dramatically to 86.6 percent in 1999 from 72.9 percent in the previous year, according to TEA analysis of AP data and Public Education Information Management System (PEIMS) course data. In addition, 92 percent of AP examinees tested in 1999 completed some type of TEA-defined advanced course that year. AP examinees who completed the corresponding AP courses in the same year continued to outscore examinees not completing the corresponding courses.
- In 1998-99, 62.3 percent (624) of the 1002 Texas public school districts with Grade 11-12 enrollment had students who took at least one AP examination. Eight of these 624 districts also had students who took one or more IB examinations.
- School districts with the highest 1999 AP examination participation (above 10.0 % of students tested) tended to be in eight major urban/suburban education service center (ESC) regions of the state: Austin, Fort Worth, Richardson, Houston, Wichita Falls, Edinburg, El Paso, and San Antonio. In addition, district AP participation and performance generally tended to increase along with increases in other performance measures, such as percentages of: students passing all Texas Assessment of Academic Skills (TAAS) tests taken, graduates taking the SAT I or ACT, and examinees with scores of at least an 1110 SAT I Total or 24 ACT Composite. District AP participation and performance also increased as district average teacher salaries increased.
- ***Ethnic group participation and performance trends.*** Clearly, issues of ethnic minority group (especially African American and Hispanic) access to, and performance on, AP and IB examinations and courses call for continued attention in the state's and nation's schools.
  - ◆ Although the participation rates for Texas Hispanics and African Americans have been climbing steadily over the past five years, only 7.9 percent of Hispanics and 4.2 percent of African Americans took a 1999 AP examination. By comparison, 13.3 percent of Whites and over one-quarter (27.4%) of Asian Americans took an AP examination that year. Gain in participation rates since 1995 also has been less rapid for African Americans than for Asian Americans, Hispanics, and Whites, while the rate for Native Americans has fluctuated. The rates for combined AP and IB participation by group were either the same or only tenths of a percentage point higher than those for AP only.

- ◆ Similar to AP participation, Texas public school Asian Americans had the highest IB examination participation rate from 1995 to 1999 on a percentage basis (about 1.0%) among all ethnic groups. They also exceeded *in number* (135) both African American (45) and Hispanic (52) IB examinees.
- ◆ Compared to 1998 results, percentages of Texas public school AP examinees scoring 3-5 went up in 1999 for Native Americans and African Americans but dipped slightly for all other ethnic groups. Similarly, the 3-5 examination score percentages slipped slightly for all groups, except for Native Americans. From 1997 to 1999, nearly three-fourths of Asian American examinees received 3-5 scores, followed by nearly two-thirds of Whites, over half of Native Americans, nearly half of Hispanics, and nearly one-third of African Americans. Even with the addition of IB 4-7 score results to AP 3-5 score results, examinee and examination score percentages were either the same or slightly higher by group than those for AP alone.
- ◆ Similar to AP examinees, Asian Americans as a group (at 96.3%) had the highest percentage of Texas IB examinees scoring 4-7 in 1998-99, followed by Hispanics (94.2%), Whites (91.8%), and African Americans (80.0%). In contrast to AP results, IB examinee percentages with 4-7 scores continued improving for all groups from 1998 to 1999, especially for African Americans.
- *Female and male participation and performance trends.* The expanding gap between males and females participating in AP and IB examinations, as well as the declining percentage of males with 3-5 AP scores, raises questions about the reasons for these trends.
  - ◆ From 1995 to 1999, the percentage of Texas Grade 11-12 female students taking AP examinations increased by 4.6 percentage points; participation for males only increased by 3.6 percentage points. Also, the percentage of female examinees with 3-5 scores fell less rapidly (from 60.5% in 1995 to 56.8% in 1999), while the percentage of male examinees earning such scores declined by 4.6 percentage points from 64.9 percent in 1995. Females exceeded males in the *number* of examinees earning 3-5 AP scores due, in part, to the higher number of female examinees. Similar trends were observed for both participation and performance by gender when AP and IB results were combined.
  - ◆ Similar to AP participation, a greater number of Texas females (424) than males (288) took 1999 IB examinations, and the participation gap between the two grew larger since 1995. While a higher percentage of female IB examinees than males achieved 4-7 scores in 1995 and 1999, a higher *number* of females than males achieved 4-7 scores from 1995 to 1999.

---

# INTRODUCTION

---

## REPORT OVERVIEW

This report includes background and general descriptions of the College Board's Advanced Placement (AP) program and the International Baccalaureate (IB) Organisation's IB program of college-level courses and examinations for high school students. Included in the background descriptions are interpretative issues regarding examination score scales, access to the courses and examinations, and specific uses and benefits associated with the courses and examinations. Data sources and the various types of definitions for commonly reported measures are described. Details follow, showing the AP and IB results and trends for the examinations and courses updated through 1998-99. Evidence for improved access to the AP and IB programs is summarized, as well as the status of examination performance and the extent to which students are prepared for college.

Report purposes are threefold. A first purpose is to promote an understanding of the AP and IB programs and of the diversity existing among high school students who attempt advanced academic challenges while still in high school. A second report purpose is to promote an understanding of the diversity existing among Texas districts in AP and IB program participation and examination performance. A final report purpose is to suggest areas for educational consideration or action for students, teachers, schools, and communities.

## GENERAL DESCRIPTION OF AP AND IB PROGRAMS

**Advanced Placement program.** The AP program is a cooperative educational endeavor between secondary schools and colleges and universities. High school students who participate in AP courses are exposed to college-level material and are challenged to complete more rigorous assignments. By doing so, students gain valuable skills in problem analysis, writing, studying, and examination preparation. Many students choose to demonstrate their mastery of the material by taking an AP examination (College Entrance Examination Board [CEEB] & Educational Testing Service [ETS], 1994a), although students can take the examinations without having taken AP courses.

Colleges and universities can grant credit, placement, or both to students who have qualifying scores (CEEB, 1999a). Generally, colleges will award credit or advanced placement for scores of 3, 4, or 5 on AP examinations, although a few colleges and universities grant credit in some courses for scores of 2. (See Table A-1 in Appendix A for verbal descriptions of scores on the 1-5 AP grading scale.) Each year, the AP program presents several types of AP Scholar Awards, tied to graduated levels of achievement, to students who perform well on three or more AP examinations (CEEB, 1999a). Students are awarded certificates, and their achievements are acknowledged on AP score reports sent to colleges in the following fall (CEEB, 2000c).

Sufficiently high scores on AP examinations also can be used to obtain the Advanced Placement International Diploma for overseas study. This component of the AP program is intended to certify the achievement of AP candidates whose higher education plans include the prospect of enrolling in a university outside the United States or Canada. The designation is not a substitute for a high school diploma; it merely acknowledges that the recipient has earned grades of 3 or higher on a specified number of AP examinations from a prescribed set of courses (CEEB, 2000b).

Since the program's inception in 1955, approximately 7.3 million students have taken nearly 10.7 million AP examinations worldwide (CEEB, 2000a). From 1987 to 1999, the total number of students in the U.S. taking an AP examination increased from 259,222 to 685,981, and the total number of AP examinations taken increased from 364,804 to 1,122,414 (CEEB & ETS, 1987, 1999c). Almost 64 percent of those who took an AP examination in 1998-99 received a grade that is generally accepted for college credit, advanced placement, or both. More than 57 percent of U.S. secondary schools participated in the program in 1999-00 (CEEB, 2000a). See Tables A-2 and A-3 in Appendix A for respective 1998 and 1999 results.

***AP courses and examinations.*** AP courses are developed locally, based on course descriptions and other materials provided by the College Board to interested schools. AP teachers typically supplement textbook and College Board course description materials with other materials, special studies, student presentations, and other student performance activities (CEEB, 1993). In addition, instructional approaches used in AP courses can include student-centered seminars with student presentations, instructor-guided discussion on supplementary readings, laboratory activities, field investigation activities, and outside projects.

Annual AP examinations are developed by committees that include discipline experts from college faculty and teachers of the relevant high school AP courses. Development periods for annual examinations span two or more years. The development committees also formulate AP course descriptions in each subject area, which they review and revise every two years to ensure that current thinking about course content and instructional reforms, such as technological advances, is being reflected. In addition to these approaches to ensure the content validity of AP examinations, the AP program employs established educational measurement practices to ensure that AP grades (scores) are valid measures of college-level performance (CEEB & ETS, 1994a).

Each AP examination consists of two or more sections. In all but the AP Studio Art examination, which requires a portfolio of work from students, AP examinations include both multiple-choice items for breadth of content coverage and free-response items that allow students to demonstrate both their understanding in an area and the ability to organize and present ideas. Free-response items are presented in a variety of formats: essays, analysis of historical documents, audiotaped responses, extended problem solving, and case study management (CEEB, 1996).

For three weeks in June of each year, several thousand faculty consultants, comprised of approximately half AP high school teachers and half university professors, convene at five sites throughout the U.S. to read and score the free-response answers written by AP examinees in May. The beginning of the three-week session is spent training the faculty consultants on the use of the scoring standards that have been developed that year by each examination's chief faculty consultant and test development committee. The application of the scoring standards is closely monitored by frequently pausing to revisit the standards, comparing the scores on the same question to ensure consistency among faculty consultants, and keeping track of each consultant's scoring pattern to watch for fatigue (CEEB & ETS, 1999b).

Table A-4 in Appendix A shows 1998-99 AP examinations, corresponding AP courses offered in Texas public schools, and the most recent recommendations by the American Council on Education (CEEB & ETS, 1994a) for minimum college credit hours to be granted for AP examination scores of 3 or higher. The Texas Education Agency's Division of Advanced Academic Services (TEA, 1997, 2000b) maintains a sourcebook of college course credit hours granted by Texas public and private colleges and universities for specific AP and IB examination scores. Two new courses and examinations have recently been added: AP Statistics in 1996-97 and AP Environmental Science in 1997-98. The College Board will offer AP Human Geography course descriptions, associated materials, and an examination in the 2000-01 school year (CEEB & ETS,

1999a). Development is currently underway on an AP World History course and examination, slated for introduction in 2001-02 (CEEB & ETS, 1999b).

**AP examination fees.** For the 1998-99 academic year, the fee for each AP examination was \$75 (\$76 in 1999-00), of which the schools normally retain \$7. The College Board offers a \$22 per-examination credit to qualified students with acute financial need. Schools are expected to forgo their \$7 administrative rebate for these candidates (CEEB, 1999b). With the \$22 College Board credit, the \$7 school rebate, and the additional sources of fee reductions from the federal government and the Texas AP/IB Incentive Program, funded by the state legislature (Texas Education Code [TEC] §§28.052-28.054), financially needy students paid as little as \$6 per examination in 1998-99 (TEA, n.d.). In 1999-00, students who met financial need eligibility criteria, as outlined by the College Board, **and** who took an AP course in the subject of the test paid no more than \$5 per AP examination (TEA, 2000a).

**International Baccalaureate (IB) program.** The IB program is a comprehensive two-year curriculum for high school students 16-19 years old. Students in the IB program are encouraged to take one subject from each of six subject groups. Students generally take examinations in May of their junior and senior years or during the last two years of their IB programs. (A smaller November testing session is available for schools in the southern hemisphere.) Students may receive advanced placement or credit, or both, upon entering college. Colleges that recognize IB scores usually award credit, advanced placement, or both to students who score in the 4-7 range on IB examinations. See Table A-1 in Appendix A for verbal descriptions of scores on the IB 1-7 grading scale. It is recommended that students contact the educational institutions they are interested in attending regarding specific policies on granting credit for scores achieved on IB examinations, as policies vary widely by institution.

**IB courses and examinations.** Diploma candidates must follow a program including interdisciplinary courses and components, along with six courses from at least five subject areas. All candidates must complete the Theory of Knowledge (TOK) course; Creativity, Action, and Service (CAS) activities; and an extended essay project based on original, independent research. In addition, one course must be taken in each of five subject areas: Language A1 (first language), Language A2 (second modern language), Individuals and Societies, Experimental Sciences, and Mathematics. A sixth course may be chosen from a list of Arts and Electives, which also includes course choices from the five main subject areas and any school-based course with an IBO-approved syllabus. The six subject-area courses are taken at either the Standard (or Subsidiary) Level (SL, representing 150 teaching hours) or Higher Level (HL, representing 240 teaching hours). Students must take at least three, but not more than four, subject-area courses at the Higher Level. This allows students sufficient freedom to investigate favorite subjects in greater depth, while helping ensure that a broad curriculum is completed during a two-year period (International Baccalaureate Organisation [IBO], 2000).

To receive an IB diploma, a student must accumulate 24 of 45 total points across six IB examination scores in the required subject areas, plus satisfactory completion of the extended essay, TOK course, and CAS activities. The maximum score of 45 points includes scores of 7 on each of the six subject examinations (42 points) and 3 bonus points for an exceptional essay and work in TOK. Students who fail to satisfy all requirements or elect to take fewer than six subject examinations are awarded a certificate for examinations completed with acceptable scores (IBO, 2000).

Evaluations of the quality of candidates' work is the responsibility of both classroom teachers and more than 3,000 examiners worldwide, who are led by chief examiners with international authority. A variety of assessment methods are used to evaluate both the content and the process of academic achievement, and to take into account different learning styles and cultural patterns. Conventional external examination techniques (essay,

short answer, multiple choice, etc.) are complemented by internal assessment of coursework by the teachers responsible for evaluating students over the two-year period. Specialized forms of assessment appropriate to the nature of a given subject are used. Teachers' internal marks are assessed by the IB examiners to assure that consistent standards are used in all IB schools. A criterion-referenced grading system is used by the IBO, with each student's performance measured against well-defined levels of achievement consistent from one examination to the next. Top grades reflect attainment of knowledge and skills relative to set standards equally applied to all schools (IBO, 1997).

***IB examination and school fees in 1999-00.*** For diploma candidates taking all six examinations in one session, the fee per student was \$130 plus \$67 for registration. For candidates seeking a certificate and not a diploma, the fee per student was \$72 plus \$46 for registration. For each examination at the higher or standard level, a \$50 fee applied. For each extended essay examination, a \$31 fee applied. Schools paid a \$310 fee for diploma candidates taking the Theory of Knowledge test (IBO, 1999). As has been the case for AP examinees, fee reductions for financially needy or other eligible Texas public school IB examinees have been available through the Texas AP/IB Incentive Program. In 1999-00, students in financial need who had taken an IB course in the subject of the test paid no more than \$5 per examination; others paid no more than \$18 per examination (TEA, 2000a).

Schools wishing to participate in the IB program pay an application fee of \$2,500. Once authorized, schools then pay an annual subscription fee of \$7,520 to offer IB courses and examinations. Schools authorized to participate in the program, but that are not immediately offering IB courses, pay a fee of \$2,060 to remain affiliated with the program for up to 18 months (IBO, 1999).

## **ACCESS TO TESTING**

***Overview.*** On both a state and national level, efforts are designed to facilitate access to testing and help to ensure increasing participation rates. Texas State Board of Education rules (19 Texas Administrative Code [TAC] §§74.11-74.13), for example, allow AP and IB courses to satisfy high school graduation requirements. In addition, state and federal funding provide support for financially needy students interested in taking AP and IB examinations.

The College Board strives to enhance test access to both students and teachers. Flexibility in administration accommodations is offered for students with disabilities or students experiencing extreme hardship. Also, professional development opportunities are provided to teachers interested in teaching advanced courses. The IBO provides similar resources for training and support.

At the local level, high schools can have a significant impact on the number and diversity of students participating in AP and IB courses and examinations. More students are likely to participate in AP and IB courses and examinations when *all* students are encouraged to undertake such coursework and when the opportunities for such course-taking are provided in the curriculum. Teachers tend to participate more as they are provided professional development opportunities on the teaching of advanced subject areas. Schools, teachers, and students are more likely to participate in these programs as financial assistance is provided to support training, curriculum changes, and examination-taking.

***Texas AP/IB Incentive Program.*** The formal purpose of the Texas AP/IB Incentive Program (TEC §§28.051-28.058) is to recognize and reward demonstrated success in achieving the state's educational goals. Table A-5 in Appendix A presents the incentives aimed at schools, teachers, and students and whether or not each incentive was funded from 1994-95 through 2000-01.

Until the start of the current biennium, the AP/IB Incentive Program had been severely constrained. The Texas Legislature approved a total of \$3 million for the fiscal 1998-99 biennium: \$500,000 per year from the Foundation School Program and \$2 million from the biennium allocation for gifted and talented education. These funds were used to reimburse AP teachers who attended AP summer institutes and to provide fee reductions for students with financial need. Effective in the fiscal 2000-01 biennium, the state legislative appropriation was substantially increased to a total of \$21 million for the biennium. This includes \$2 million from the biennium allocation for gifted and talented education for *both* Pre-AP/IB activities (for middle schools and early high school students) and the Texas AP/IB Incentive Program over the biennium. A remaining \$8 million and \$11 million were allocated for the Texas AP/IB Incentive Program for FY 2000 and FY 2001, respectively (Rider 30 of the General Appropriations Act, Article III-Education, 76th Legislature). Thus, additional components of the AP/IB Incentive Program to be funded in the current biennium include: (a) \$30 of the cost of every AP or IB examination taken by high school students completing an AP or IB course (designated under the Public Education Information Management System [PEIMS]) in the subject of the test, (b) financial bonuses to campuses for each student scoring 3-5 on an AP examination or 4-7 on an IB examination, and (c) equipment grants of up to \$3,000 (based on need) to about 250 campuses submitting applications (TEA, 1999b, 2000a).

***Federal AP and IB fee assistance and other programs.*** The federal AP fee assistance program was first authorized in the 1992 Higher Education Act; however, the program was not actually funded by Congress until federal fiscal year (FY) 1998, when a total of \$3 million was awarded (CEEB, 2000d). This program was first implemented in 32 states, including Texas, to provide fee assistance for low-income students. Those students who qualified as low-income were at 150 percent of the Census Bureau's poverty guidelines. Consequently, \$300,000, Texas' share of the \$3 million in federal grants, was available to financially needy 1999 Texas examinees. The Secretary of Education expanded the fee assistance program to financially needy students taking IB examinations as well. The federal money resulted in about \$15 extra in fee reductions per examination for financially needy Texas examinees. In addition, Congress appropriated \$4 million for federal FY 1999 AP and IB fee assistance. Of the \$4 million, Texas again received \$300,000 for May 2000 examinations. For May 2001 examinations, Texas will be receiving \$379,000 in federal funds. In addition, Texas competed for additional federal funds to develop programs that increase participation of minority and other historically disadvantaged students in AP and IB programs. Texas received \$191,577 in federal funds to establish the AP Spanish Language Middle Years Grant Program in 1999-00, another \$200,000 for that program in 2000-01, and \$1,096,000 to establish the Center for Texas AP/IB Incentives in 2000-01.

***Block scheduling and AP.*** Many high schools in Texas are using a variety of methods to schedule classes known collectively as block scheduling. One of the most common forms is four courses meeting 80-90 minutes a day for about 90 days (Kramer, 1996). With this type of schedule, students may be exposed to advanced material only one semester out of the year. If the advanced course ends in December, with AP and IB examinations administered in May, there is a concern that the students may not perform as well as if they had more recently finished the course. When courses are compressed into the spring semester, students may not have finished the coursework by the time examinations are administered in May. Some educators maintain, however, that students actually can fit more advanced courses into their schedules under a block schedule arrangement than under traditional schedules (Edwards, 1995).

In a recent College Board study of the four most popular AP examinations (Calculus AB, Biology, U.S. History, and English Literature), students on year-long schedules generally performed better on the four AP examinations than students on semester-long course schedules (CEEB, Office of Research and Development, 1998). Moreover, when students were on compressed schedules, results suggested they achieved higher AP scores when instruction was more recent (e.g., spring course followed by May examination) and when more

time was scheduled for instruction. Results for the English Literature and U.S. History examinations tended to be less compelling than those for the Calculus AB and Biology examinations. One possible explanation may involve the way these courses are taught, with better or multiple opportunities for schooling (including self-study) in English and history throughout Grades K-12.

Results from studies of the impact of block scheduling on AP examination scores should continue to be carefully considered, along with educational, course-specific, and other (e.g., discipline or cost-related) factors that may also play into the various local scheduling scenarios. For example, results were inconclusive from a multivariate study conducted by TEA (1999c) of the impact of block scheduling on a number of performance indicators in Texas public high schools. The College Board's AP Program (1996) suggested that "performance gaps may narrow or disappear as teachers gain more experience with the use of the 90-minute period of instruction" (p. 3).

## **SPECIFIC USES OF AP AND IB EXAMINATION RESULTS**

***State and national reporting on overall progress.*** For many years, the College Board has prepared summary reports of AP examination results for the nation and the individual states (e.g., CEEB & ETS, 1995, 1996, 1997, 1998, 1999c). The national results have provided an implicit benchmark for examining state performance. However, the state versus national AP performance comparisons are most appropriate when AP examination participation rates, educational and demographic characteristics of examinees, and AP policies within states and within secondary and postsecondary institutions are similar. Such comparisons, when made with consideration of other potential explanations for performance differences, can help in evaluating educational progress within and among institutions over time.

In recent years, interest in using AP examination results as indicators of educational progress and comparative performance has emerged nationally, as well as within certain regions of the nation. One example is the National Education Goals Panel's (NEGP, 1999b) annual progress reporting of AP examination participation and performance. It was chosen as a direct measure of Goal 3, one of the eight national education goals adopted by Congress in 1994. Goal 3 calls for the nation's students to demonstrate competency over challenging subject matter in a broad array of academic subjects by the year 2000. The AP measure in the NEGP reports is the number of AP examination scores of grade 3 or higher per 1,000 11th- and 12th-graders. These reports compare the most recent year's performance to a prior benchmark year to gauge progress on the measure for the nation and for individual states. In Texas, significant improvement was observed, with the number of scores 3-5 per 1,000 11th- and 12th-graders more than doubling from 1991 to 1999 (34 per 1,000 students, 1991; 82 per 1,000 students, 1999). The national number of scores 3-5 also increased over this period from 55 per 1,000 students to 97 per 1,000 students (NEGP, 1999a).

***State policy regarding the Academic Excellence Indicator System (AEIS).*** The AEIS and the accountability system support the accomplishment of the state's goals for public education. These systems recognize, reward, sanction, and intervene with school districts and campuses to ensure excellence in education for all segments of the student population. Information used to rate and acknowledge districts and schools, or to provide a more comprehensive profile of characteristics and performance, is compiled into the AEIS reports. Three types of performance and profile indicators are used in the system.

- ***Base indicators*** are identified in statute and used to determine accountability ratings.
- ***Additional indicators*** are used to acknowledge high performance on other statutorily defined indicators.
- ***Report-only indicators*** are furnished on annual campus-, district-, and state-level reports. They may be identified by statute, identified by the commissioner, or adopted by the State Board of Education (TEA, 2000b).

In April 1996, the State Board of Education adopted AP performance and participation data as a report-only indicator for the AEIS. The reporting of this indicator began in 1996 with inclusion of examination results for that year and the previous year. At the time, it was requested that IB performance and participation data be included as part of the AEIS as soon as possible, but at least within the next two years (State Board of Education, 1996). Effective in the fall of 1998, this indicator was defined and reported as the unduplicated, or combined, AP and IB participation (one measure) and performance (two measures) for both examinations and examinees at the district, region, and state levels (cf. TEA, 1999d). Except for the few districts with both AP and IB participation (eight statewide in 1998-99), the indicator actually represents ***AP participation and performance only***. Of the combined AP and IB statewide participation in 1998-99, AP represented 99.3 percent of unduplicated participation, 98.8 percent of unduplicated examinee performance, and 96.7 percent of unduplicated examination performance.

---

## DATA SOURCES

---

Data were compiled and analyzed from a number of sources for this report. Consistent with the compilation and reporting of AP and IB examination data from these sources, results are summarized by the year within which the May examinations are taken.

First, College Board summary reports of AP score results for all examinees (from both public and non-public schools) from 1986-87 through 1998-99 were used as the source for comparisons among Texas, the nation, and other states (CEEB & ETS, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994b, 1995, 1996, 1997, 1998, 1999c). No comparable reports (cf. IBO, 1995) were available from the IBO for summaries of all (both public and non-public school) IB score results for Texas, others states, the nation, other nations, or internationally. Second, score results for Texas public school students were provided directly to TEA by the College Board (via ETS on contract for the College Board) and by the IBO in Cardiff, Wales, Great Britain. ***Note that Texas public school results were the only IB score data available and comparable to AP for inclusion in this report.*** Third, the Texas public school AP and IB examination score results were examined in conjunction with data taken from the TEA PEIMS database. These second and third data sources are also the sources used for AP and IB data reported in the AEIS.

Student grade-level, ethnicity, and gender, as well as other district, campus, and student coursework completion information from PEIMS, were used to analyze the Texas public school AP and IB results. When student grade level, ethnicity, and gender were not available from PEIMS, they were obtained from the Texas AP examinee files. In a very few instances, when these same student data were unavailable from PEIMS for IB examinees, they remained unavailable because they could not be obtained from the Texas IB examinee files.

---

## CURRENT RESULTS AND TRENDS

---

### GENERAL TRENDS

***AP examination trends for Texas, the nation, and other states.*** In May 1999, 51,228 students in 971 Texas schools (public and non-public) took 88,485 AP examinations (see Table A-3 in Appendix A). This put Texas ***third*** in the nation, behind California and New York, in the number of AP examinees and examinations. Texas was ***seventh*** among the states in the percentage change (+16.2%) in number of examinees from the

previous year—especially impressive because Texas was third highest in the number of examinees from the prior year.

Table 1 shows that, from 1987 to 1999, the number of Texas AP examinees increased almost sixfold from 8,792 to 51,228, while national numbers went from 259,222 to 685,981. At the same time, the number of AP examinations taken in Texas rose over sevenfold (from 12,506 to 88,485), while the number of examinations taken nationally more than tripled (from 364,804 to 1,122,414). The number of Texas schools (public and non-public) participating in AP examinations also rose during the period, *more than tripling* from 285 to 971, while the same increase nationally was almost 60 percent (from 7,776 to 12,229). In 1999, the percentage of Texas schools participating in AP examinations (60.7%) exceeded the national percentage (56.0%), while Connecticut was the highest (87.9%) and North Dakota was the lowest (8.2%) (see Table A-3 in Appendix A).

From 1987 to 1999, patterns of the most marked increases in Texas AP examinee and examination volumes coincided in 1995, 1998, and 1999, while corresponding growth nationally was less rapid on a percentage basis (see Table 1). In some part, this can be linked to 1993 Texas legislation first authorizing and partially funding the Texas Advanced Placement Incentive Program in 1994-95, a program that has been continued through the current biennium, spanning 1999-00 through 2000-01.

Along with increasing numbers of examinations, Texas has experienced a dramatic increase in the number of 3-5 AP scores over the past 13 years (from 8,897 to 49,721), as shown in Table 1. Since 1994-95, however, the percentage of AP examination scores of 3-5 earned by Texas students (56.2% in 1998-99) has slipped

**TABLE 1**

**AP Examination Trends for Texas and the Nation: 1986-87 Through 1998-99**

Year	Number of AP Schools		Number of Examinees		Number of Exams		Number of Scores 3-5		Percent of Scores 3-5	
	Texas	U.S.	Texas	U.S.	Texas	U.S.	Texas	U.S.	Texas	U.S.
1999	971	12,229	51,228	685,981	88,485	1,122,414	49,721	712,903	56.2	63.5
1998	909	11,843	44,093	618,257	74,192	991,952	42,909	635,922	57.8	64.1
1997	834	11,424	37,563	566,720	62,318	899,463	37,526	579,865	60.2	64.5
1996	756	11,136	31,843	525,072	52,156	824,329	32,381	523,321	62.1	63.5
1995	649	11,274	27,770	493,263	45,733	767,881	28,006	476,327	61.2	62.0
1994	544	10,863	21,178	447,972	33,944	684,449	23,605	452,377	69.5	66.1
1993	502	10,594	18,139	413,939	28,437	623,933	19,334	401,256	68.0	64.3
1992	451	10,191	15,364	378,692	23,672	566,036	16,442	369,942	69.5	65.4
1991	413	9,781	14,101	351,144	21,529	523,236	14,446	334,911	67.1	64.0
1990	394	9,292	12,766	323,736	19,625	480,696	13,367	318,963	68.1	66.4
1989	346	8,768	11,832	309,751	17,813	455,996	12,102	297,813	67.9	65.3
1988	297	8,247	10,478	288,372	15,567	419,101	10,739	281,566	69.0	67.2
1987	285	7,776	8,792	259,222	12,506	364,804	8,897	246,458	71.1	67.6

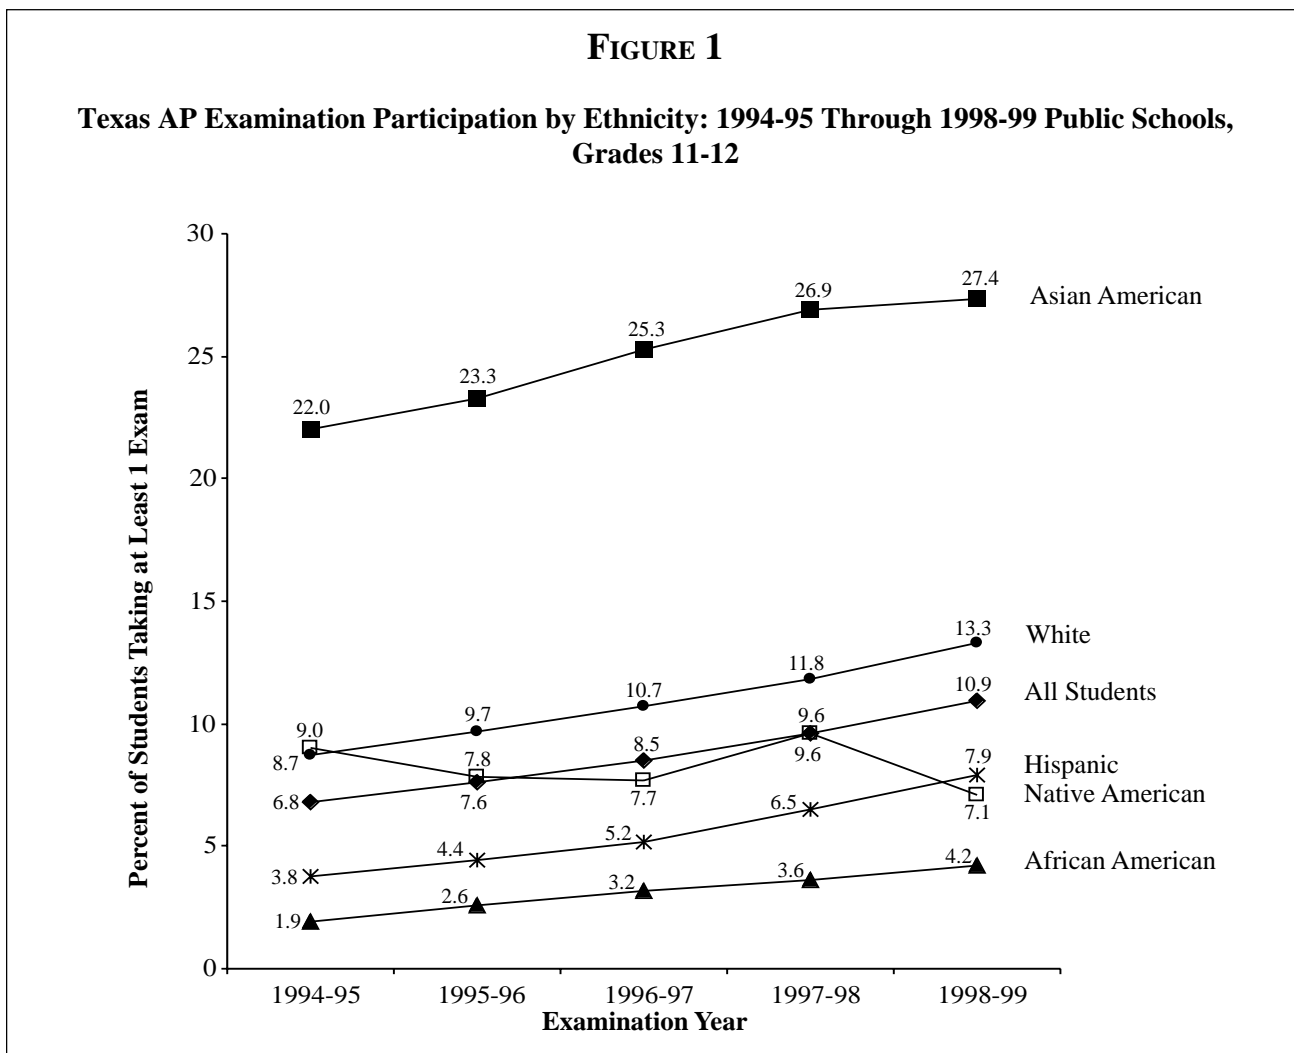

*Data Sources:* CEEB and ETS (1987-1993, 1994b, 1995-1996, 1997, 1998, 1999c) and personal communication with P. Williamson, College Board Southwestern Regional Office, November 10, 1997, for number of schools data for 1987-1990. Examination score data are for all schools (public and non-public).

*The percentage of Texas schools with AP examinees in 1996-97 was 56.3 percent compared to 52.9 percent nationwide.*

below the national percentage (63.5%). Considering the large increases in the total number of examinees and examinations, most notably in Texas since 1994-95, the decline in overall AP examination scores is not surprising—because the decline coincides with a sustained increase in schools participating in the AP program *for the first time*.

Table A-3 in Appendix A shows that there was a moderately positive correlation between 1998-99 state percentages of 11th- and 12th-graders taking AP examinations, and the percentages of examinations with scores of 3-5. That is, the two percentages tended to increase or decrease together. Because the percentages of all (public and non-public school) students taking AP examinations in most states remains quite low, this suggests that there is still a great deal of untapped potential in student participation and performance among states.

**Statewide AP and IB participation and performance trends for public schools.** Texas public school indicator trends statewide on AP mirrored trends mentioned earlier for all Texas schools. From 1995 to 1999, the percentage of 11th- and 12th-graders taking AP examinations rose from 6.8 percent to 10.9 percent (see Figure 1 and Table A-6 in Appendix A). Including IB examinees with AP examinees, as reported in the

Data Sources: TEA analysis of CEEB 1994-95 through 1998-99 Texas AP public school examination data using grade level, gender, and ethnicity from TEA PEIMS as available and from AP files otherwise.

AEIS, showed percentages of students tested rising from 8.6 percent in 1997 to 11.0 percent in 1999 (see Table 2). While both the percentage of AP examinees and of examinations with 3-5 scores slipped from 1996 to 1999 (from 62.6% to 58.3% for examinees, and from 60.6% to 55.0% for examinations), **both a greater number of examinees and a greater number of examinations** than ever before qualified potentially for advanced standing or college course credit (see Figure 2 on page 11 and Tables A-7 and A-8 in Appendix A). Combining IB examinees and examinations with 4-7 scores with AP 3-5 score results yielded slightly higher percentages than observed for the AP examinee and examination performance percentages only (see Tables 3 and 4 on page 12 ).

As with the AP program, public school IB participation also has increased over time, though on a much smaller scale. There were 714 Grade 11-12 students in 10 Texas public schools who took 1,793 IB examinations in 1999—up from the 429 students in 11 schools taking 910 IB examinations in 1995 (see Tables A-9 and A-11 in Appendix A). Thus, most of the growth in IB examination participation has occurred *within* rather than across schools. In contrast to the AP performance dip most recently, the percentage of Texas public school IB examinees earning scores of 4-7 went from 79.7 percent in 1995-96 to 92.0 percent in 1998-99, while the percentage of examinations with these same scores rose from 73.4 percent to 83.7 percent (see Tables A-10 and A-11 in Appendix A).

**Statewide AP and other advanced course taking trends and examination taking correspondences.** Fundamental to preparation for success on both AP and IB examinations is relevant coursework, such as AP, IB, or other types of advanced courses. Paragraphs below summarize to what extent students in Texas public schools appear to be completing such coursework, according to data collected through PEIMS. Even assuming that some inaccuracies may exist in reporting the courses completed by individual high school students, the trends by and large fairly consistently and compellingly suggest steadily increasing numbers of students completing the relevant AP courses each year.

**TABLE 2**

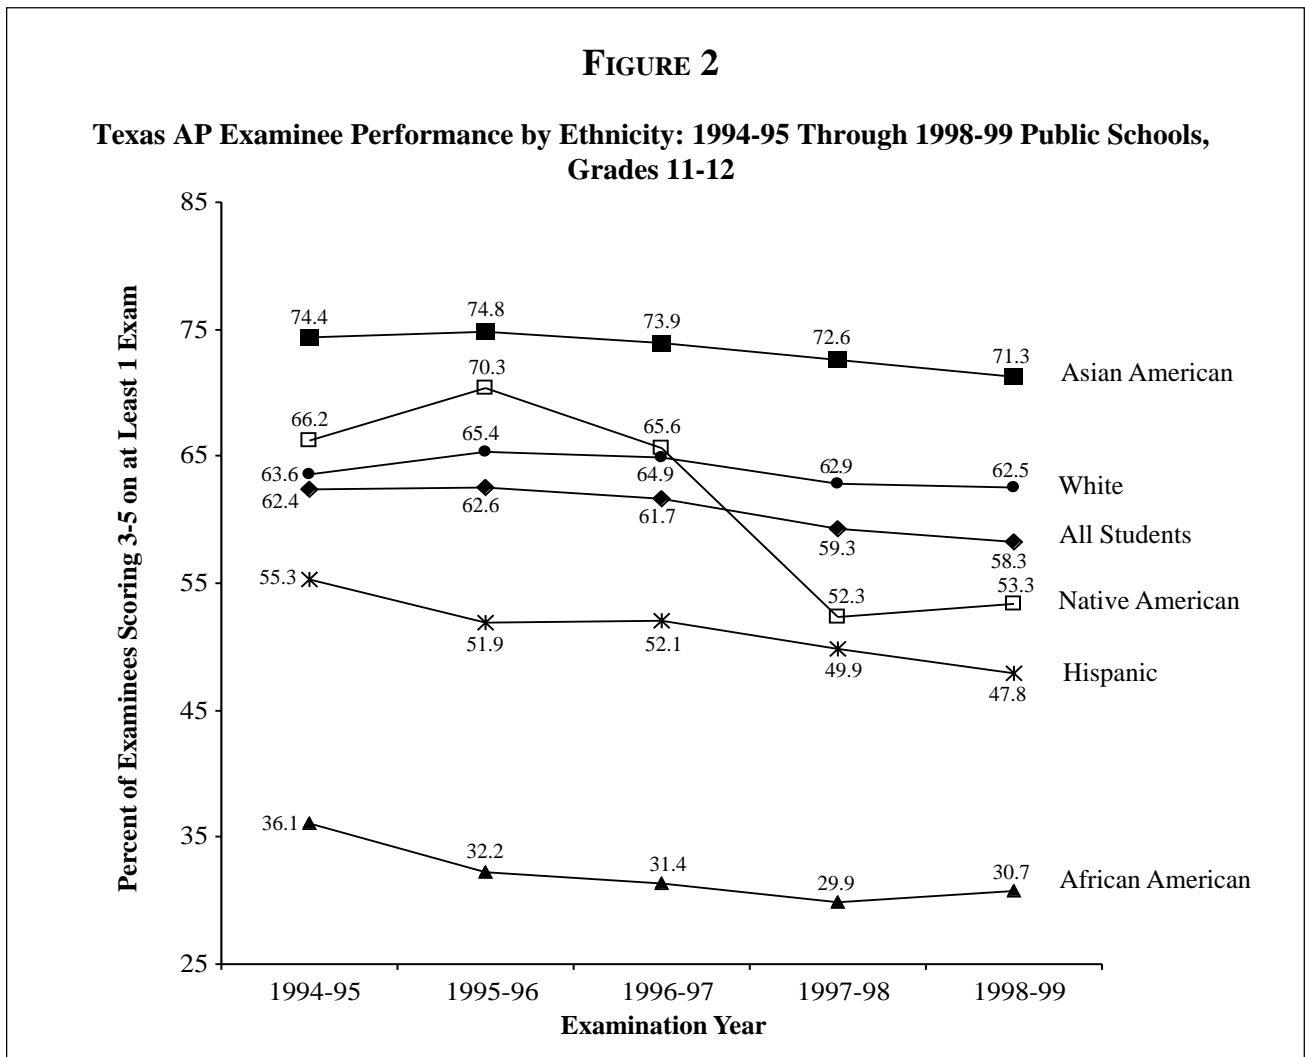

**Combined Texas AP and IB Examination Participation: 1996-97 Through 1998-99 Public Schools, Grades 11-12**

Student Groups	1996-97			1997-98			1998-99		
	Number of Students	Number of Examinees	Percent of Students Taking Exams	Number of Students	Number of Examinees	Percent of Students Taking Exams	Number of Students	Number of Examinees	Percent of Students Taking Exams
All	377,285	32,400	8.6	393,939	38,068	9.7	404,269	44,494	11.0
Female	195,693	18,602	9.5	204,395	21,870	10.7	209,762	25,555	12.2
Male	181,592	13,795	7.6	189,544	16,198	8.5	194,507	18,937	9.7
African American	49,021	1,621	3.3	51,136	1,894	3.7	51,253	2,195	4.3
Asian American	12,118	3,096	25.5	12,834	3,488	27.2	14,214	3,919	27.6

White	197,740	21,341	10.8	204,700	24,420	11.9	207,815	27,905	13.4

*Data Sources:* TEA analysis of 1996-97 through 1998-99 CEEB AP and IBO IB Texas public school examination data using grade level, gender, and ethnicity from TEA PEIMS as available and from AP files otherwise for AP examinees. Students who took either an AP or IB examination or both are counted only once.

The College Board encourages schools with AP examinees to offer AP courses in corresponding subject areas. However, circumstances such as resource constraints or too few students may mitigate against AP courses being offered at some high schools. On the other hand, non-AP advanced courses may prepare students sufficiently to perform well on the AP examinations. As Figure 3 on page 13 shows, Texas public schools with students *completing AP courses* rose from 158 schools in 1993 to 1,053 schools (or 61.3% of 1,719 schools with 11th- and 12th-graders) in 1999. While the number of schools with students taking AP examinations but *not completing AP courses* decreased from 288 to 32 over the same period, the number of schools with students *completing both AP courses and examinations* grew from 135 to 831 (48.3% of schools). In addition, the number of schools with students *completing AP courses without taking AP examinations* went from 23 to 222, perhaps representing the recent rapid increase in the number of schools offering AP courses for the first time.

Data Sources: TEA analysis of CEEB 1994-95 through 1998-99 Texas AP public school examination data using grade level, gender, and ethnicity from TEA PEIMS as available and from AP files otherwise.

*Data Sources:* TEA analysis of 1996-97 through 1998-99 CEEB AP and IBO IB Texas public school examination data using grade level, gender, and ethnicity from TEA PEIMS as available and from AP files otherwise for AP examinees. Examinations scored at criterion include all AP examinations scored 3-5 plus all IB examinations scored 4-7.

The seven-year period from 1993 to 1999 also saw student participation in AP and other advanced courses increase (see Table A-12 in Appendix A). The number of Texas public school Grade 9-12 students completing at least one AP course increased almost tenfold from 11,402 to 108,773, while the number of AP courses completed went from 17,073 to 338,373—almost a 20-fold increase. In 1997-98, 18.9 percent of Texas public school Grade 9-12 students completed and received credit for TEA-defined advanced courses (AP, IB, and other), also up from earlier years even when students served in special education were also included in the calculation (TEA, 1999a).

*Data Sources:* TEA analysis of CEEB 1992-93 through 1998-99 Texas public school AP examination data and analysis of 1992-93 through 1998-99 TEA PEIMS course completion data, using only last semester completion of courses as the basis for numerical counts.

*Note:* 1994-95 counts for the number of schools with AP examinations and the number of schools with AP courses vary slightly from counts reported for these data in TEA (1995), which were preliminary at that time.

Since 1992-93, the number of Texas public schools with AP examinees has increased substantially, as well as the number of schools with students completing AP courses. In 1998-99, 222 schools had students completing AP courses without taking the examinations, while the number of schools with AP examinees and no AP courses decreased by 256 from 1992-93 to 1998-99.

Not all of the students who participate in advanced courses ultimately take AP examinations, nor do all AP examinees take AP courses. These correspondences were examined for school years 1992-93 through 1998-99. Beginning in 1995 for the first time, over half (rather than under half) of the public school Grade 9-12 AP examinees (56.4%) also completed at least one AP course; this rose to 72.9 percent in 1998 and increased even more dramatically to 86.6 percent in 1999 (see Table A-13 in Appendix A). In addition, 92.0 percent of 1999 AP examinees completed some type of TEA-defined advanced course that same year.

Table A-14 in Appendix A shows that, while less than one fourth (24.6%) of public school Grade 9-12 students completing any TEA-defined advanced course also took an AP examination in 1999 (up from 12.2% in 1993), just over 40 percent of AP course completers took an AP examination (down slightly since 1993). Specifically, more than half (52.1%) of 1999 AP examinations were taken by students completing the corresponding AP subject course (a slight increase from 51.8% in 1998), and less than one fourth (23.5%) of AP course completers in 1999 took corresponding AP subject examinations (a slight decrease since 1998) (see Table A-15 in Appendix A). On average, AP examinees completing the corresponding AP courses in the same year continued outscoring examinees not completing the corresponding courses, as shown in Table 5 and Table A-16 in Appendix A.

***Subject-specific AP and IB examination participation and performance patterns.***

A richer understanding of AP and IB examination participation and performance can be obtained by studying examination data by subject (see Tables A-17 and A-18 in Appendix A). Table A-18 shows the English Language and Composition, English Literature and Composition, and U.S. History examinations combined accounted for almost half (48.5%) of all 1999 AP examinations taken by Texas (public and non-public school) students, followed by Calculus AB and Spanish Language. Nationally, the U.S. History, English Literature and Composition, Calculus AB, and English Language and Composition examinations accounted for about half (50.7%) of 1999 examinations taken.

**TABLE 5**

**Correspondence Between AP Examination Scores and AP Courses Completed: 1997-98 to 1998-99 Texas Public Schools, Grades 9-12**

AP Exam Score	1997-98 Exams Taken With and Without the Corresponding AP Course		1998-99 Exams Taken With and Without the Corresponding AP Course	
	Without	With	Without	With
	Number (Percent)	Number (Percent)	Number (Percent)	Number (Percent)
5	2,748 (12.6)	5,403 (12.0)	2,809 (12.8)	6,775 (11.6)
4	3,775 (17.3)	8,462 (18.7)	3,561 (16.2)	10,387 (17.8)
3	5,722 (26.2)	12,257 (27.1)	5,058 (23.0)	16,002 (27.4)
2	5,834 (26.7)	12,282 (27.2)	5,734 (26.1)	16,804 (28.7)
1	3,764 (17.2)	6,791 (15.0)	4,801 (21.9)	8,522 (14.6)
<b>Mean Score</b>	2.81	2.85	2.72	2.83

*Data Sources:* TEA analysis of CEEB 1997-98 to 1998-99 Texas AP public school examination and TEA PEIMS course completion data, using only last semester completion of courses as the basis for numerical counts.

*Note.* AP examinations were linked to corresponding AP courses by student to obtain the statistics above. In a small number of instances, scores were not available for examinations that were taken and, thus, are not included in the statistics above.

In 1999, Texas students took relatively fewer AP examinations on a percentage basis than students nationally in subjects including U.S. History, Calculus AB, Biology, Chemistry, Physics B, and European History. When at least 500 AP examinations were taken in a subject, Texas mean scores exceeded national scores the most on Spanish Language and Studio Art: General examinations.

The most popular IB subject examination in 1998-99 was English A1, accounting for just over one-sixth (17.0%) of Texas public school examinations, followed by Spanish B, Biology, and Physics (see Table A-19 in Appendix A). Of these four, mean scores were highest on Spanish B and English A1.

## DIFFERENTIATING TRENDS AND PATTERNS

**Examinee profiles by ethnicity.** Texas Hispanics and African Americans remained underrepresented as groups among 1999 AP and IB examinees, compared to their percentages of enrollment. However, Texas Hispanics, at 23.7 percent, increased as a percentage of all (public and non-public school) AP examinees from 21.9 percent in 1998, while the percentage of AP examinees represented by African Americans was 4.3 percent in both 1998 and 1999 (see Table 6). Among Texas public school IB examinees in 1999, Whites represented the largest percentage of test takers, at 66.8 percent, followed by Asian Americans (18.9%), Hispanics (7.3%), African Americans (6.3%), and Native Americans (less than 1.0%).

**TABLE 6**

**1998-99 AP Examinees by Grade Level, Gender, and Ethnicity for Texas and the Nation**

Examinee Group	Number of Examinees		Percent of Total Examinees		Difference in Percent of Total Examinees from 1997-98 to 1998-99	
	Texas	U.S.	Texas	U.S.	Texas	U.S.
<b>9th/10th grade</b>	2,816	57,113	5.5	8.3	0.1	0.3
<b>11th grade</b>	24,739	264,811	48.3	38.6	2.3	0.6
<b>12th grade</b>	22,537	349,300	44.0	50.9	-2.7	-1.1
<b>11th/12th grade</b>	47,276	614,111	92.3	89.5	-0.4	-0.7
<b>Female</b>	29,212	380,480	57.0	55.5	-0.1	0.0
<b>Male</b>	22,016	305,501	43.0	44.5	0.1	0.0
<b>African American</b>	2,206	31,023	4.3	4.5	0.0	0.1
<b>Native American</b>	229	3,136	0.4	0.5	0.0	0.1
<b>Asian American</b>	4,337	75,875	8.5	11.1	-0.4	0.1
<b>Hispanic</b>	12,162	62,853	23.7	9.2	1.8	0.5
<b>White</b>	28,650	445,880	55.9	65.0	-0.8	-0.3
<b>Other Ethnicity</b>	1,253	21,670	2.4	3.2	0.2	0.2
<b>Not Stated</b>	2,391	45,544	4.7	6.6	-0.7	-0.6
<b>Total</b>	51,228	685,981	100.0	100.0		

*Data Sources:* CEEB and ETS (1998, 1999c). Data are based on all (both public and non-public school) examinees.

*Note:* Statistics for examinees who were not in Grades 9-12 are excluded from the grade-level groups above.

Compared to the nation, Texas had more than twice the percentage of 1999 (public and non-public school) AP examinees who were Hispanic (23.7% versus 9.2%), but a lower percentage who were White (55.9% versus 65.0%) and Asian American (8.5% versus 11.1%). Higher proportions of historically lower-scoring, under-prepared groups of examinees in Texas may help explain Texas' lower percentages of 3-5 AP examination scores overall versus the nation.

***Ethnic group participation and performance trends.*** Although the participation rate for Texas public school Hispanics and African Americans has been climbing steadily over the past five years, only 7.9 percent of Hispanics and 4.2 percent of African Americans took a 1999 AP examination, versus 13.3 percent of Whites and over one quarter (27.4%) of Asian Americans (see Table A-6 in Appendix A). Gain in participation rates has been less rapid for African Americans than for Asian Americans, Hispanics, and Whites. Most notably, the gain in participation rates for Hispanics was larger recently, rising by 2.7 percentage points since 1997. At the same time, the rate for Native Americans has fluctuated, falling most recently along with a sharp increase in the number of Native American students in 1999. Even with almost a 4:1 ratio of African American to Asian American students, almost twice as many Asian American as African American students took a 1999 AP examination. Likewise, Hispanic students outnumber Asian American students by 9 to 1, but there were just 2.6 times as many Hispanic as Asian American AP examinees. Combined AP and IB participation rates by group are virtually identical to those for AP participation alone (see Table 2 on page 10).

Similar to AP participation, Texas public school Asian Americans had the highest IB examination participation rate in 1998-99 on a percentage basis (about 1.0%) among all ethnic groups (see Table A-9 in Appendix A). Asian American examinees (135) also continued to exceed *in number* African American (45) and Hispanic (52) IB examinees. Clearly, issues of ethnic minority group access to AP and IB examinations call for continued attention in the state's, as well the nation's, schools.

Compared to 1998 results, the percentages of Texas public school Grade 11-12 AP examinees scoring 3-5 dipped slightly in 1999 for Asian Americans, Hispanics, and Whites (see Table A-7 in Appendix A). The percentages for Native Americans and African Americans went up by 1.0 and 0.8 percentage points, respectively. Equivalent trends by group for combined AP and IB results are presented in Table 3 on page 12. The AP 3-5 examination score percentages for all ethnic groups, except Native Americans, went down slightly since 1998 (see Table A-8 in Appendix A). Table 4 on page 12 shows comparable results by group when AP and IB data are combined. Among AP examinees over the past two years, nearly three-fourths of Asian American examinees received 3-5 scores, followed by nearly two-thirds of Whites, over half of Native Americans, almost half of Hispanics, and nearly one-third of African Americans. Somewhat lower but roughly the same pattern of 3-5 AP examination score percentages also were achieved by all ethnic groups.

In contrast to AP results, Texas public school IB examinee percentages with 4-7 scores increased for all groups from 1998 to 1999 (see Table A-10 in Appendix A), while percentages of 4-7 IB examination scores rose for all groups except Native Americans and Asian Americans (see Table A-11 in Appendix A). Asian Americans, at 96.3 percent in 1999, had the highest percentage of examinees scoring 4-7, followed by Hispanics (94.2%), Whites (91.8%), and African Americans (80.0%).

***Examinee profiles by gender.*** Table 6 on page 15 shows that females generally held steady as a percentage of all AP examinees nationally (55.5 % in 1998 and 1999) and in Texas (57.1% in 1998 and 57.0% in 1999). Similarly, females made up the largest share (59.4%) of 1999 Texas public school IB examinees. The continuing underrepresentation of males among examinees compared to male enrollment raises questions about reasons for this pattern.

**Female and male participation and performance trends.** Over the past five years, as shown in Table A-6 in Appendix A, the percentage of Texas public school female Grade 11-12 students taking AP examinations increased more rapidly (from 7.5% in 1995 to 12.1% in 1999) than the percentage of males (from 6.1% to 9.7%). Table 2 on page 10 shows combined AP and IB participation results by gender. During the same period, the percentage of female AP examinees with 3-5 scores fell less rapidly (from 60.5% in 1995 to 56.8% in 1999) than the percentage for male examinees (from 64.9% to 60.3%) (see Table A-7 in Appendix A). See Table 3 on page 12 for combined AP and IB examination performance by gender. Females have consistently exceeded males in the sheer *number* of examinees earning 3-5 AP scores due, in part, to the higher number of female examinees.

As with AP participation, a greater number of Texas public school females (424) than males (288) took 1999 IB examinations, and the participation gap between the two grew larger since 1995 (see Table A-9 in Appendix A). While a higher percentage of female IB examinees than males achieved 4-7 scores in 1995 and 1999, Table A-10 in Appendix A also shows that a higher *number* of females than males achieved 4-7 scores from 1995 to 1999.

**AP and IB examination results by district.** Of the 1002 Texas public school districts with Grade 11-12 enrollment in 1998-99, 624 had students who took at least one AP examination, and 8 of the 624 also had students who took one or more IB examinations. All 8 districts with IB examination participation also had AP examination participation. Of the 1002 districts with 11th- and 12th-graders, 378 had neither AP nor IB participation. Of the 516 districts with five or more AP examinees, 159 districts had fewer than five examinees or examinations with scores of 3, 4, or 5. Tables B-1 and B-2 in Appendix B list the respective 1998 and 1999 Texas AP examination results for each district with 11th- and 12th-graders. Respective 1998 and 1999 IB results for only the few districts with examinees are listed in Tables B-3 and B-4 in Appendix B. Respective examination results for the districts with both AP and IB examinees in 1998 and 1999 appear in Tables B-5 and B-6 in Appendix B.

**Characteristics of districts participating in AP and IB examinations.** The majority of public school districts with enrollments of 500 students or more were participating in 1999 AP examinations; *all* districts with enrollments of 5,000 or more were participating in 1998 and 1999 (see Tables C-1 and C-2 in Appendix C; see also the Glossary for definitions of each of the 25 distinct groupings of districts shown in Appendix C tables). However, in 1999, around 66 percent of rural districts were not participating. A majority of districts in 17 of 20 education service center (ESC) regions (Regions 1-7, 9-15, and 18-20) had 1999 AP participation. Only a minority of districts had 1999 AP examination participation when no student's score exceeded 1110 for the SAT I Total or 24 for the ACT Composite or when average teacher salaries were below \$31,051.

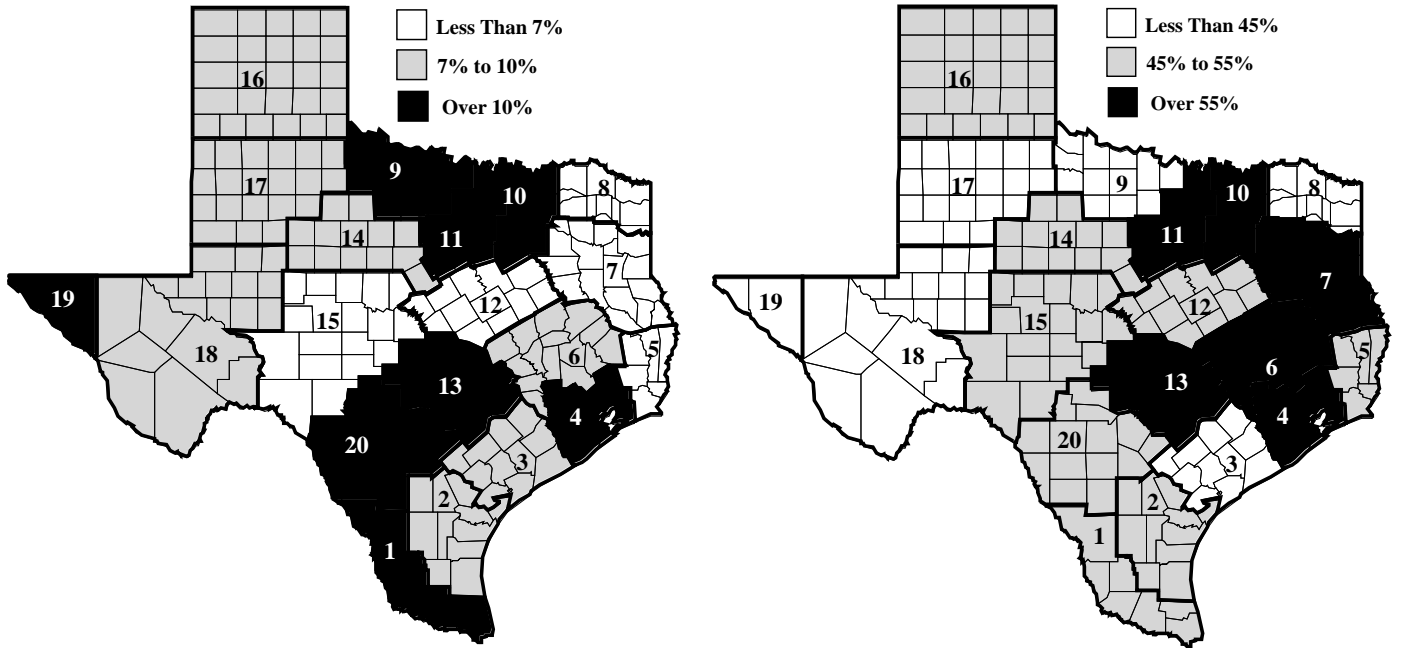

The few public school districts with IB participation (specifically, nine in 1998 and eight in 1999) had most characteristics in common with the types of districts with majority AP participation (see Tables C-3 and C-4 in Appendix C). All had enrollments of 5,000 students or more, at least 20.0 percent of examinees scoring at least 1110 on the SAT I or 24 on the ACT, and ethnic minority pupil enrollments of at least 20.0 percent. In 1999, only two of the districts had average teacher salaries of less than \$33,885, and only one had under 55.0 percent of SAT I- or ACT-tested graduates or under 25.8 percent of teachers with advanced degrees.

**Characteristics associated with district-wide AP examination participation and performance.** Of Texas' 624 public school districts with 1999 AP examination participation, those with the highest participation (above 10.0% of students tested) tended to be in eight major urban/suburban ESC regions of the state: Austin, Fort Worth, Richardson, Wichita Falls, Edinburg, Houston, El Paso, and San Antonio (see Figure 4 on page 18, and Table C-6 in Appendix C; also see Table C-5 in Appendix C for 1998 information). Out of these eight

**FIGURE 4**

**1998-99 AP Participation: Percentage of Students Taking at Least One Examination**

**1998-99 AP Performance: Percentage of Examinees Scoring 3 or Above**

*Data Sources:* TEA analysis of CEEB 1998-99 Texas public school AP examination data and TEA PEIMS 1998-99 enrollment data using examinee grade level from PEIMS as available and from AP files otherwise.

ESC regions, Austin, Fort Worth, and Richardson had more than 60 percent of examinees scoring 3-5 on at least one AP examination, while Region 4 (Houston) was highest at 70.1 percent. In addition, district AP examinee participation and performance generally tended to increase along with increases in district characteristics such as average teacher salaries, percentages of students passing all TAAS tests taken, percentages of graduates taking the SAT I or ACT, and percentages of examinees with SAT I Total scores of at least 1110 or ACT Composite scores of at least 24 (see Figure 5 on page 19, and Table C-6 in Appendix C).

It is important to recognize that the higher AP participation and performance in districts with higher average teacher salaries may be linked in part to other district characteristics, such as district size, that are also related to teacher salaries. For example, large districts, which have higher AP participation and performance, also typically have higher teacher salaries.

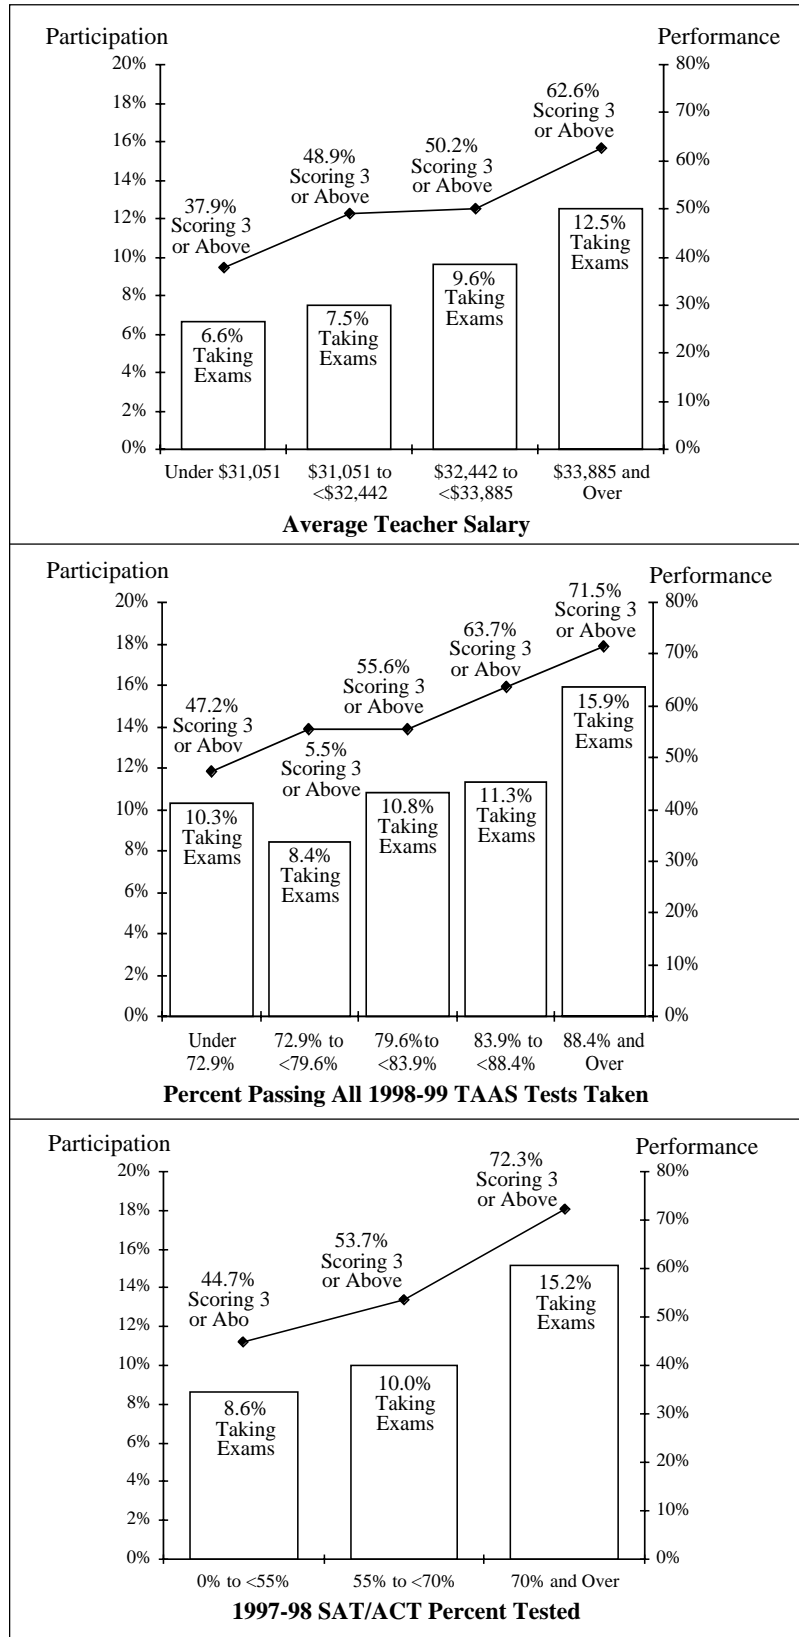

## SUMMARY

Overall, the AP results show robust growth over the past thirteen years (1987-1999) in the number of Texas schools and districts with students participating in the examinations, number of students tested, number of examinations taken, and number of advanced courses (AP, IB, and other TEA-defined advanced courses) completed by public school students. AP examination performance results are more mixed, with the highest number yet (through 1999) of examinees earning scores of 3-5 on the examinations, but with a small slippage in the percentage of examinees earning the same range of scores since 1996. As educators and students in schools with new or recently expanding AP programs gain more experience with AP courses and examinations, recovery in examination performance is expected.

While the number of participating IB public schools and districts remained virtually constant from 1995 to 1999, the 1998-99 examinee and examination numbers did represent respective increases of about 66 percent and 97 percent above the 1995 numbers. Similarly, the number of 4-7 Texas IB scores showed a 121 percent increase over 1995's number, and the percentage of scores at 4-7 (83.7%) was highest in 1998-99.

*Data Sources:* TEA analysis of CEEB 1998-99 Texas public school AP examination data and of TEA PEIMS 1998-99 enrollment data using examinee grade level from PEIMS as available and from AP files otherwise.

1998-99 AP Participation and Performance by District Characteristics

---

# CONSIDERATIONS FOR EDUCATIONAL COMMUNITIES

---

Benefits of the AP program extend not just to students, but also to their teachers, high schools, and the colleges and universities they attend (CEEB, 1996). Although only a few schools in Texas have IB programs, similar benefits most likely apply. Potentially, both programs provide students with the opportunity to study certain academic subjects in greater depth and to develop analytical and other study skills that can contribute to college-level success. The examinations can also enrich the academic experience because comparisons of achievement with peers can motivate and inspire confidence for managing academic challenges in college. Most obviously, students with sufficiently high examination scores can receive college credit or advanced placement, depending on the policies of the college or university they attend.

For secondary school teachers, both programs introduce opportunities for professional development and the chance to teach challenging subjects to able, motivated students. For secondary schools, both programs can help enrich the academic curriculum and enhance the quality and reputation of college preparatory programs. For colleges and universities, both programs can provide additional means to identify and recruit students who have successfully met demands in challenging college-level courses.

To reap the most in potential benefits from AP and IB courses and examinations, educational communities (students, educators, policymakers, schools, and community members) should examine a number of educationally relevant factors and supports. Such considerations can help ensure that able, motivated students have access to AP or IB courses and examinations and that students will be successful.

## **STUDENT ACCESS TO AP AND IB COURSES AND EXAMINATIONS *WITHIN SCHOOLS* SHOULD BE EXAMINED.**

***Access to courses.*** The challenge is to develop programs that will effectively prepare a broad range of high school students for exposure to college-level academics offered in high school. To that end, curriculum articulation and alignment may need scrutiny, including possible development of Pre-AP, Pre-IB, or other relevant prerequisite courses to better prepare a large number and diversity (e.g., by ethnicity, gender, economic status, etc.) of students for AP and IB courses. Forming AP vertical teams of educators across grades (middle and high school) and content areas may help in this regard, as well as review of district and school policies governing access to AP and IB courses. Educators must ensure that the opportunity for participation in such courses is open to all students.

***Access to examinations.*** As is the case for any examination not required of all students (e.g., SAT I, ACT, AP, IB, etc.), the extent of student participation can be affected by any number of factors.

- One important factor is the fee charged per AP or IB examination taken. Although paying fees for examinations that provide students the potential to earn college credit with qualifying scores is much less than the cost of taking college courses, the fees can be prohibitive for many. However, examination cost has become less of an issue with: College Board fee reductions for AP examinations; the funding of the Texas AP/IB Incentive Program over the three previous biennia and especially the current biennium; the new federal funding for AP and IB; and other locally sponsored fee reductions and waivers (e.g., Hager, Antinone, Fleisher, & Vinson, 1997). These efforts usually include special provisions for assisting financially needy students.

- While students may take AP and IB examinations for reasons other than for earning college course credit or advanced placement, qualifying scores on other examinations, such as the College Board's SAT II: Subject Tests and CLEP tests, are often used by colleges and universities as alternative tests to grant students course credit or advanced placement (e.g., Brasel, 1993; TEA, 1997; The University of Texas at Austin, 1995).
- Even students who receive high school credit for AP or IB courses without taking the examinations or without achieving qualifying examination scores often receive more consideration in the college admissions process than students who have not completed advanced high school courses.

**STUDENT ACCESS TO AP AND IB COURSES AND EXAMINATIONS *STATEWIDE* SHOULD BE EXAMINED.**

While the number of Texas schools and districts with AP courses, examinations, or both has been growing quite rapidly over the past few years, there remain a large number of Texas public high schools and districts with students taking neither the courses nor examinations. Texas public school data in 1999 continued showing low-enrollment districts having lower AP examination participation than large districts. Because of the type of review process maintained and the financial commitment required by the IBO for school and district participation, the number of Texas schools and districts participating in the IB program has remained both low and virtually constant.

- Small numbers of students may make it more difficult for schools or districts to offer AP, IB, or other advanced courses. However, small districts have a history of collaborating to meet the educational needs of students. Also, solutions through technology, such as increased access to distance learning courses (e.g., TEA, T-STAR Information and Training Center, 1998), are becoming more of a reality.
- Schools with no recent or previous AP or IB examination experience may be at a disadvantage when compared to schools with prior experience, and must be allowed ample time and support to establish such programs.
- Percentages of all (public and non-public school) students taking AP examinations in most states remain quite low, and these percentages across states tend to increase with state percentages of 3-5 examination scores achieved. This suggests that there is still a great deal of untapped potential in student participation and performance among states, including Texas. Currently, the correlation between participation and performance percentages across Texas districts is negligible.
- Teacher training subsidies and equipment grants through the Texas AP/IB Incentive Program can help support establishment of AP and IB programs in a greater number of schools and districts, as well as expanding and improving existing programs.

**RIGOR AND QUALITY OF AP AND IB COURSES SHOULD BE EXAMINED AND SUPPORTED.**

Student examination performance is one type of check on the rigor and quality of AP and IB courses.

- If discrepancies in course grades assigned by teachers and scores obtained on AP and IB examinations are observed, they may point to a possible need for evaluation of the curriculum and instruction.
- Careful evaluation of student performance on various components of the AP and IB examinations may help identify areas needing improvement or better coverage in the curriculum.

- Discrepancies in examination performance among student groups (e.g., by ethnic group, gender, varying amounts and quality of academic preparation, previous examinations taken, etc.) should be examined so that supports (e.g., study guides, review sessions, extra tutoring, etc.), relevant teacher training, or curriculum and instructional changes can be considered.
- Based on studies from the College Board (e.g., College Board, AP Program, 1996; CEEB, Office of Research and Development, 1998), if semester-long (often known as block scheduling) rather than year-long (or traditional) schedules are used for AP courses, careful consideration and evaluation may be needed regarding the impact of schedule type, along with other factors, on student course and examination performance.

### **STUDENT PERFORMANCE IN AP AND IB COURSES SHOULD BE EXAMINED.**

Analysis of TEA and College Board AP data continue to show increasing numbers and percentages of Texas examinees completing AP and other advanced courses during the same year, along with increasing numbers and percentages of AP and other advanced course completers who have taken AP examinations. Another study (Henderson, Winitzky, & Kauchak, 1996) has indicated that training teachers to most effectively prepare students in AP courses for AP examinations can have a major influence on how well students perform on the examinations. Extending such generalizations to IB examination performance is reasonable but can only be done on a tentative basis at best.

- Examinees who have taken the corresponding AP courses continue to outscore, on average, those who have not taken the corresponding courses. Thus, students who take AP courses should be encouraged to take the examinations and should be well informed about possible support available to help defray examination costs. (IBO policy usually does not permit students to take an IB examination unless they have taken the corresponding course.)
- Examinees who have had progressively rigorous academic preparation, along with progressively rigorous experience with examinations such as the PSAT/NMSQT, SAT I, and ACT, may have some advantage over students who have not had the same type of preparation and experience.
- According to Henderson et al. (1996), effective teachers ask and distribute more questions across all of their students, spend a greater percentage of time on task during a class period, provide more assignments and greater amounts of feedback on those assignments, and create a learning environment that encourages higher participation by students when responding to questions. They also have more elaborated and organized knowledge structures of their subject matter than less effective teachers.

### **AP AND IB EXAMINATION PERFORMANCE SHOULD BE INTERPRETED RELATIVE TO COLLEGE SUCCESS.**

AP and IB courses and examinations appear to be means to many critical longer-term goals. Willingham and Morris' (1986) study of AP examinees revealed the following patterns.

- Students who earned scores of 3, 4, or 5 on AP examinations tended to excel in college to a greater degree than students who did not take the examinations. Such students were more likely to maintain a B average their freshman year and were more likely to graduate with academic honors. They were more frequently cited as leaders and as most successful overall. These students also were more often accepted to doctoral-level programs following undergraduate work than their non-AP peers.

- Students who earned more scores of 4 or 5 on their AP examinations tended to have higher scores on a college admissions test and to graduate in the top decile of their high school class. They also were more likely to graduate from college with top honors. Students who scored 1 or 2 on the AP examinations tended to do less well—for example, they were less likely to be among the top performers in high school and were less likely to graduate from college with honors.
- AP examinees were more likely to take more coursework in the subject areas in which they were tested. In fact, they were also two to five times more likely to major in a subject area in which they were tested than were college students in general. Thus, taking a particular AP subject examination may indicate a special interest in that academic area.

### **SUBJECT-SPECIFIC, COLLEGE-LEVEL LEARNING FROM AP AND IB COURSES IS FOREMOST.**

While the most important factor is whether or not students in AP or IB courses are experiencing subject-specific, college-level learning, performance on AP and IB examinations is the result of objective, external standardized measurement of how well students are likely to perform in the same courses taken in college. Thus, the quality and rigor of the advanced courses, the effectiveness of the teaching, and the availability of the AP or IB course and examination experience to an ever-increasing number and diversity of able and motivated students must be combined before these all-important, college-level learning experiences can occur. Ultimately, such higher-level learning should translate into a greater number of academically prepared Texas high school graduates, as well as graduates who are better prepared overall for the college and university experience.

**TABLE A-5**

**Texas AP/IB Incentives Through the 2000-01 Biennium**

<b>Incentive Target</b>	<b>Incentive Description</b>	<b>Funded Since 1994-95 Biennium</b>	<b>Funded in 2000-01 Biennium*</b>
School	A one-time \$3,000 equipment grant for providing a college-level Advanced Placement (AP) or International Baccalaureate (IB) course to be paid to a school based on need as determined by the commissioner.	No	Yes * Approximately 250 equipment grants will be awarded during the FY 2000-FY 2001 biennium.
School	\$100 for each student who scores a three or better on a college-level AP examination or four or better on an IB examination.	No	Yes * Actual award amount will depend on both the number of students tested and the number who receive the indicated scores.
Teacher	Subsidized teacher training, not to exceed \$450 for each teacher, for a college-level AP or IB course.	Yes	Yes
Teacher	A one-time award of \$250 for teaching a college-level AP or IB course for the first time.	No	No
Teacher	A share of the teacher bonus pool, which shall be distributed by the teacher's school in shares proportional to the number of courses taught. Fifty dollars may be deposited in the teacher bonus pool for each student enrolled in the school who scores a three or better on an AP examination or four or better on an IB examination.	No	No
Student	A student receiving a score of three or better on an AP examination or four or better on an IB examination may receive reimbursement, not to exceed \$65, for the testing fee.	No	No
Student	The agency may pay for all AP and IB examinations taken by students who take a PEIMS-designated AP/IB course in the subject of the test.	No	Yes * The agency will assume \$30 of the cost of each examination taken by eligible students. Thus, no student will pay more than \$46 per AP examination or \$18 per IB examination.
Student	Students in financial need will receive further federal and state fee reductions.	Yes	Yes * Students meeting financial need eligibility criteria outlined by the College Board and IB North America will pay no more than \$5 per AP or IB examination. Campuses must waive the administrative fee for AP examinations.

*Data Sources:* TEC §§28.052-28.054 and Rider 30 of the Appropriations Act, Article III - Education, 76th Texas Legislature.

## RESULTS AND NOTES LISTED IN TABLES

The 1997-98 and 1998-99 AP examination results listed for each district in Tables B-1 and B-2, respectively, include: the total number of students enrolled in Grades 11-12, number and percentage of 11th- and 12th-graders who took at least one AP examination, number and percentage of examinees with at least one score of 3-5, total number of examinations taken, number and percentage of AP examinations with scores of 3-5, and a “note” column for district-specific comments. Similarly, respective IB results for 1997-98 and 1998-99 are listed by district in Tables B-3 and B-4; however, columns pertaining to the number and percentage of examinees and examinations refer to scores within a 4-7 range. In addition, Tables B-5 and B-6 contain respective 1997-98 and 1998-99 combined Texas AP and IB examination results by district.

More specifically, AP score data for districts are not listed in Tables B-1 and B-2 when the number of students with scores is less than five because of the instability of statistics based on such low numbers of scores. A “<5-masked\*” note is printed for districts with fewer than five students tested. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. Districts with no 11th- or 12th-graders tested received a “none tested” note. In contrast, Tables B-3 and B-4 only list the few districts with IB examinees, while Tables B-5 and B-6 only list districts with both AP and IB examinees. In Tables B-1 through B-6, districts (if any) with five or more examinees but with fewer than five scores of either 3-5 for AP or 4-7 for IB were given a “<5-masked+” comment.

## SOURCES OF DATA FOR TABLES

Texas data were obtained from the College Board via its contractor, the Educational Testing Service, on 40,232 and 46,961 students who took one or more AP examinations in May 1998 and 1999, respectively. Similarly, Texas data were obtained from the International Baccalaureate Organisation in Cardiff, Wales, Great Britain, on 723 and 782 Texas students who took IB examinations in May 1998 and 1999, respectively. District results included 37,743 AP examinees in 1998 and 44,186 in 1999, as well as 612 IB examinees with valid scores who were 11th- and 12th-graders enrolled in Texas public high schools in 1998 and 714 in 1999. Some IB score results for 1998 were pending as of August 1, 1998, while 1999 IB results included scores as determined by August 9, 1999. Data on enrollment for students who were *not* receiving special education services and their grade levels were obtained from TEA’s Public Education Information Management System (PEIMS). When grade level on an AP examinee was not available from PEIMS, it was obtained from the AP examinee data file. PEIMS data were also used to distinguish public from non-public school data. Because Texas public school AP results include Grade 11-12 examinees only and are based on PEIMS identification of Texas public schools, College Board summaries of Texas public school AP results may vary somewhat from those published by TEA. The IBO publishes no comparable summaries of Texas IB examination results.

# NOTES ABOUT TABLES IN APPENDIX C

---

## RESULTS AND NOTES LISTED IN TABLES

Tables C-1, C-2, C-5, and C-6 present AP program statistics and Tables C-3 and C-4 present IB statistics when the district data are aggregated into 25 types of groupings of districts with similar characteristics as defined in the Glossary and by TEA's ANALYZE program. From these, results start with district enrollment groupings and end with groupings of the district percentage of teachers with an advanced degree. Tables C-1 and C-2 show the number and percentage of districts with and without AP examination participation by each of the 25 types of groupings of district characteristics in 1998 and 1999, respectively, while Tables C-3 and C-4 for 1998 and 1999, respectively, show how the districts with IB examination participation are distributed across the 25 types of district ANALYZE groupings. In Tables C-5 (1998) and C-6 (1999), these groupings allow examination of, by the various district characteristics, the percentage of 11th- and 12th-graders taking at least one AP examination and the percentages of both examinees and examinations with scores of 3-5.

## SOURCES OF DATA FOR TABLES

Texas data were obtained from the College Board via its contractor, the Educational Testing Service, on 40,232 and 46,961 students who took one or more AP examinations in May 1998 and 1999, respectively. Similarly, Texas data were obtained from the International Baccalaureate Organisation in Cardiff, Wales, Great Britain, on 723 and 782 Texas students who took IB examinations in May 1998 and 1999, respectively. District results included 37,743 AP examinees in 1998 and 44,186 in 1999, as well as 612 IB examinees with valid scores who were 11th- and 12th-graders enrolled in Texas public high schools in 1998 and 714 in 1999. Some IB score results for 1998 were pending as of August 1, 1998, while 1999 IB results included scores as determined by August 9, 1999. Data on enrollment for students who were *not* receiving special education services and their grade levels were obtained from TEA's Public Education Information Management System (PEIMS). When grade level on an AP examinee was not available from PEIMS, it was obtained from the AP examinee data file. PEIMS data were also used to distinguish public from non-public school data. Because Texas public school AP results include Grade 11-12 examinees only and are based on PEIMS identification of Texas public schools, College Board summaries of Texas public school AP results may vary somewhat from those published by TEA. The IBO publishes no comparable summaries of Texas IB examination results.

**GLOSSARY OF 1997-98 AND 1998-99  
TEXAS EDUCATION AGENCY  
ANALYZE CATEGORY DESCRIPTIONS**

---

**TEXAS EDUCATION AGENCY**  
**1997-98 AND 1998-99 ANALYZE CATEGORY DESCRIPTIONS**  
**(IN ORDER OF APPEARANCE IN TABLES C-1 THROUGH C-6)**

**Enrollment Groupings**

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

**District Type**

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas is listed below. Charter school districts form a separate category.

**Major Urban.** The state's largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso areas.

**Major Suburban.** Other districts in and around the major urban areas.

**Other Central City.** Major districts in other large Texas cities.

**Other Central City Suburban.** Other districts in and around the other large, but not major, Texas cities.

**Independent Town.** Largest districts in counties with populations of 25,000 to 100,000, or the number of students enrolled is greater than 75 percent of the largest district.

**Non-Metro: Fast Growing.** Districts not fitting in any of the above categories but exhibiting a five-year growth rate of at least 20 percent with at least 300 students enrolled.

**Non-Metro: Stable.** Districts not fitting any of the above categories but with an enrollment exceeding the state median.

**Rural.** Districts not fitting any of the above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

**Charter School Districts.** The open-enrollment school districts chartered by the State Board of Education. Charter schools operate in facilities of commercial or nonprofit entities or a school district.

**Property Wealth**

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year as determined by the Comptroller's Property Tax Division (CPTD). The total number of students is for the school year coinciding with the respective 1998 and 1999 ANALYZE categories. The first wealth grouping shows 10 categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping, with each category representing about five percent of the state's students. The special statutory and charter school districts without taxable property wealth form a separate category in all three wealth groupings.

## **Total Tax Effort**

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. Rates are expressed per \$100 of taxable value. A fifth category is reserved for the special statutory and charter school districts without property tax levies.

## **Maintenance and Operations (M&O) Effective Tax Effort**

A four-category tax effort grouping of districts showing the M&O effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rates shown include money generated by districts for equalizing wealth. A fifth category is reserved for the special statutory and charter school districts without property tax levies.

## **Highest Property Value Category**

A four-category CPTD classification based on property use. A district is placed into the category that represents its greatest total property value. A fifth category is reserved for the special statutory and charter school districts without taxable property wealth.

*Residential.* Single-family, multi-family, and residential inventory.

*Land.* Vacant lots and rural real (taxable).

*Oil and Gas.* Oil, gas, and minerals.

*Business.* Commercial and industrial real property, commercial and industrial personal property, and utilities.

## **Small/Sparse Adjustment**

A four-category grouping of districts based on the small/sparse adjustment amount as a percentage of the total adjusted basic allotment amount. The small/sparse percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts. A fifth category is reserved for districts receiving no small/sparse adjustment.

## **Cost of Education Index (CEI) Level**

A five-category grouping of districts based on the CEI level. It reflects geographic variations in costs and prices outside district control. The current index, which has a minimum value of 1.0 and maximum of 1.2, was implemented in 1991-92.

## **Operating Cost Per Pupil**

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall PEIMS submission.

## **Education Service Center (ESC) Region**

The state is divided into 20 geographic regions, each served by an ESC. This category reflects the ESC region from which the district receives services, not the geographically assigned ESC region. For the vast majority of districts, these are the same.

## **TAAS: Percentage Passing All Tests Taken**

A five-category grouping of districts based on the percentage of students passing the respective 1998 and 1999 years of the Texas Assessment of Academic Skills (TAAS). For Grades 3-8 and 10, the total number of students passing all sections of the TAAS taken is expressed as a percentage of the total number of students taking one or more tests. This percentage excludes special education students and third- through sixth-graders taking the test in Spanish and includes only those students in the district in October of the school year, which is the percentage used for accountability purposes. A sixth category is reserved for districts not administering the test.

## **SAT I / ACT: Percentage Taking**

A three-category grouping based on the percentage of graduates taking the SAT I and/or the ACT Assessment in the previous year. A fourth category is reserved for districts that had no graduates.

## **SAT I / ACT: Percentage Scoring At or Above Criterion**

A five-category grouping based on the percentage of examinees who scored at or above the criterion (1110 on SAT I Total and/or 24 on ACT Composite) on the SAT I and/or ACT in the previous year. The number meeting the criterion is divided by the number of examinees. A sixth category is reserved for districts that had no examinees.

## **Density**

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB, now the CPTD), the Texas Education Agency, and the Texas Water Commission (TWC). Maps provided by districts to the SPTB were digitized by TWC to determine acreage. A fifth category is reserved for the special statutory and charter school districts without available mileage information.

## **Pupil Change From Prior Year**

A five-category grouping based on the growth or decline in district student population over a one-year period. Districts with declining enrollment represent one category, while the remaining categories show one-year growth rates ranging from “0% to 3%” to “10% and over.”

## **Percentage African American, Hispanic, and Minority Pupils**

Three six-category groupings based on the ethnic composition of district student populations, as reported in PEIMS. Minority percentage is calculated as the sum of all non-White populations expressed as a percentage of the total. Non-White populations include American Indian or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

### **Percent Economically Disadvantaged Pupils**

A six-category grouping based on the percentage of students enrolled in the district who are classified as economically disadvantaged in PEIMS as follows:

- a) eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- b) from a family with annual income at/below the federal poverty line;
- c) eligible for AFDC or other public assistance;
- d) recipient of a Pell Grant or comparable state need-based financial assistance program; or
- e) eligible for programs assisted under Title II of the Job Training Partnership Act.

### **Average Teacher Experience**

A four-category grouping based on average years of teacher experience. This average is computed by taking the total years of professional experience for each district teacher, multiplying by each teacher's full-time-equivalent (FTE) count, summing these products for the whole district, and dividing by the total teacher FTE count.

### **Average Teacher Salary**

A four-category grouping based on average district teacher salary. This average is computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include any other supplement.

### **Percent Minority Teachers**

A six-category grouping based on the minority composition of district teaching populations. Minority percent is calculated by summing all non-White teacher FTEs and dividing by the total teacher FTEs.

### **Percent Teachers with Advanced Degrees**

A four-category grouping based on district percentage of teachers with advanced degrees. This percentage is computed as the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.

## PUBLICATION ORDER FORM

Purchaser Name \_\_\_\_\_ Date \_\_\_\_\_

Send to (name, if different) \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ Zip \_\_\_\_\_

To place an order for a publication, fill out information below and make check or money order payable to:

## COMPLIANCE STATEMENT

### **TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION**

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

- (1) acceptance policies on student transfers from other school districts;
- (2) operation of school bus routes or runs on a nonsegregated basis;
- (3) nondiscrimination in extracurricular activities and the use of school facilities;
- (4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
- (5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
- (6) nondiscriminatory practices relating to the use of a student's first language; and
- (7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

### **TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.**

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
