#### Abstract

This report examines Advanced Placement (AP) and International Baccalaureate (IB) participation and performance in Texas during the 2003-04 school year. The numbers of AP and IB examinees in Texas public schools were higher than in previous years. In 2003-04, the percentage of AP examinees in the public schools scoring in the 3-5 range and the percentage of examinations with scores of 3-5 decreased from the previous year. At the same time, the percentages of IB examinees with scores of 4-7 increased and the percentage of IB examinations with scores of 4-7 decreased. Higher percentages of Asian/Pacific Islander and White students received AP scores of 3-5 and IB scores of 4-7 than African American and Hispanic students. AP participation in Texas public and non-public schools combined increased more rapidly than participation nationally between 1986-87 and 2003-04. In 2003-04, the percentages of AP examinations with scores of 3-5 in public and nonpublic schools decreased in Texas and the United States.

Keywords. Advanced placement, international baccalaureate, credit by examination, testing, incentive, high school, financial need, scores, gifted and talented.

## Highlights

## Texas Public Schools

## Statewide Results

- In the 2003-04 school year, a total of 77,582 Texas public school students took 152,725 Advanced Placement (AP) examinations. From 1994-95 to 2003-04, the percentage of 11th and 12th graders taking AP examinations rose from 6.8 percent to 17.2 percent.
- The percentage of AP examinees scoring in the 3-5 range was 53.5 percent in 2003-04. The percentage of examinations with scores in the 3-5 range was 48.5 percent.
- In 2003-04, 88.6 percent of International Baccalaureate (IB) examinees scored in the 4-7 range. The percentage of AP and IB examinees combined who met the score criteria for either AP or IB (54.1\%) was four-tenths of a percentage point higher than for AP alone.
- Among AP examinees tested in 2003-04, 91.1 percent completed advanced academic courses during the year.
- In 2003-04, a total of 691 (63.3\%) of the 1,091 Texas public school districts and charter schools with Grade 11-12 enrollment had students who took at least one AP examination. Of these 691 districts, 19 had students who took one or more IB examinations.
- In 1992-93, there were only 158 Texas public schools with students completing AP courses. In 2003-04, 1,114 schools (56.1\%) with Grade 11-12 enrollment had one or more students who completed at least one AP course.

## Participation and Performance by Ethnicity

- Although AP participation rates for Hispanics and African Americans in Texas public schools climbed steadily between 1994-95 and 2003-04, only 13.1 percent of Hispanics and 9.1 percent of African Americans took AP examinations in 2003-04. By comparison, 20.8 percent of Whites and 39.5 percent of Asian/Pacific Islanders took AP examinations that year.
- As with AP participation, Texas public school Asian/Pacific Islanders had the highest IB examination participation rate (1.7\%) among all ethnic groups in 2003-04.
- Among IB examinees, the proportion of Hispanics increased from 6.3 percent in 1994-95 to 13.7 percent in 2003-04. The proportion of African Americans decreased from 8.9 percent to 6.4 percent.
- In 2003-04, the percentages of Texas public school AP examinees scoring in the 3-5 range on at least one AP examination decreased over the previous year for all ethnic groups.
- In 2003-04, Asian/Pacific Islanders and Whites had the highest percentages of Texas IB examinees scoring in the $4-7$ range ( $92.3 \%$ and $89.5 \%$, respectively), followed by Hispanics (84.7\%) and African Americans (76.4\%). Compared to 2002-03, performance increased for all ethnic groups except Whites.

## Participation and Performance by Gender

- From 1994-95 to 2003-04, the participation rate for Grade 11-12 female students taking AP examinations increased by 11.8 percentage points to 19.3 percent; participation for males increased by 8.9 percentage points to 15.0 percent.
- The percentage of female examinees scoring in the 3-5 range on AP examinations was 52.1 percent in 2003-04. The percentage of male examinees scoring in the $3-5$ range was 55.5 percent.
- Similar percentages of female (88.8\%) and male (88.3\%) IB examinees achieved scores in the 4-7 range in 2003-04.

## Comparative Results for Texas, Other States, and the United States

- In 2003-04, a total of 101,115 students in 1,198 Texas public and non-public schools took 183,130 AP examinations. This put Texas second in the nation, behind California, in the number of AP examinees and the number of AP examinations taken. Texas was 10th among the states in the percentage increase ( $11.3 \%$ ) in number of examinees from the previous year.
- Between 1986-87 and 2003-04, participation in AP examinations increased more rapidly in Texas than in the nation as a whole. In Texas, there were about 11.5 times as many examinees in 2003-04 (101,115 examinees) as in 1986-87 ( 8,792 examinees), whereas nationally, there were approximately 4.2 times as many examinees in 2003-04 (1,081,102 examinees) as in 1986-87 (259,222 examinees).
- The number of Texas public and non-public schools participating in AP examinations also rose between 1986-87 and 2003-04, from 285 to 1,198. Nationally, the number of participating schools increased from 7,776 to 14,144 .
- The three AP examinations with the largest numbers of test takers were the same in Texas and the nation: English Language and Composition, U.S. History, and English Literature and Composition.
- Compared to the United States, Texas had higher percentages of examinees with scores in the 3-5 range on examinations of Spanish Language, European History, Physics C: Mechanics, Studio Art: Drawing, and Studio Art: 2D Design.

## Overview

This report is arranged into six major sections. The first section includes brief histories and descriptions of the Advanced Placement (AP) and International Baccalaureate (IB) programs, information on the types of courses and examinations offered, a summary of fees, a description of program benefits and access, and an explanation of the uses of AP and IB examination scores. The second section provides a history of policies related to the Texas AP Incentive Program, state and federal funding for the programs, and inclusion of AP/IB as an indicator in the Academic Excellence Indicator System. The third section presents information on data sources and methods used to aggregate data and calculate and report results. The fourth section reports updated results for AP and IB participation, examination performance, and course-taking patterns of Texas public high school students through the 2003-04 school year. The fifth section compares results for public and nonpublic high school students in Texas, other states, and the United States. The sixth section provides suggestions for improving the accessibility and quality of AP and IB programs.

# Advanced Academic Programs: Advanced Placement (AP) and International Baccalaureate (IB) 

## History of AP and IB Programs

As early as the 1950s, high schools, colleges, and universities had begun designing courses and examinations to allow high school students to receive college credit and/or advanced college placement. In 1951, the Ford Foundation sponsored a project in three private high schools and three universities to design examinations that would give students advanced college placement (College Board, 2001a, as cited in Nugent, 2002). The Foundation's Fund for the Advancement of Education subsequently provided financial support to 12 colleges and 12 secondary schools to expand the project. A committee from these institutions comprised the School and College Study of Admissions with Advanced Standing. The College Board took ownership of the program in 1955 and created what is now the Advanced Placement Program.

The International Baccalaureate Diploma Programme, founded in 1968, began as the International Schools Examination Syndicate, a group of schools interested in establishing a common curriculum and university entry credential. The schools also hoped that "critical thinking and exposure to a variety of points of view would encourage intercultural understanding by young people" (IBO, 2002, p. 2). The Diploma Programme for students in the final two years of school before college was eventually developed through grants from the United Nations Educational, Scientific, and Cultural Organization (UNESCO), the Twentieth Century Fund, and the Ford Foundation.

## General Description of AP and IB Programs

## AP Program

The AP program is a cooperative educational partnership between secondary schools and colleges and universities. It is designed to give high school students the opportunity to take college-level courses. AP courses are developed locally based on course descriptions provided by the College Board and are taught by high school teachers. Annual AP examinations are developed by committees that include college and university faculty and high school teachers who teach AP courses. The committees employ established educational measurement practices to ensure that AP scores are valid measures of college-level performance (Casserly, 1986; College Board \& Educational Testing Service [ETS], 1994a; Morgan \& Crone, 1993; Morgan \& Maneckshana, 2000; Morgan \& Ramist, 1998). The test development process includes college curriculum surveys, pretesting of multiplechoice questions, and college comparability studies (College Board, AP Central, 2004a).

AP examination scores range from 1 to 5 and reflect qualification for college credit (Table 1 on page 4). Generally, colleges and universities award credit or advanced placement for scores of 3 or above, although a few institutions grant credit in some subjects for scores of 2 (College Board, 2000).

Table 1
Description of Scores in Advanced Placement (AP) and International Baccalaureate (IB) Examination Grading Scales

| AP examinations |  | IB examinations |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

|  |  | 2 | Poor | F | No grade |
|  |  | 1 | Very poor |  |  |

Source. College Board and Educational Testing Service (1994a) and International Baccalaureate Organisation (1997).

Students can contact colleges or universities for information about credit granted for advanced academic courses in high school.

Sufficiently high scores on AP examinations also can be used to obtain the Advanced Placement International Diploma (APID) for overseas study. This component of the AP program is intended to certify the achievement of AP candidates whose higher education plans include the prospect of enrolling in universities outside the United States or Canada. The designation is not a substitute for a high school diploma; rather, it is an acknowledgement that the recipient earned grades of 3 or higher on a specified number of AP examinations from a prescribed set of courses (College Board, AP Central, 2005a).

Each year, the College Board presents several types of AP Scholar Awards to students based on levels of performance on AP examinations (College Board, AP Central, 2005b). Students are awarded certificates, and their achievements are acknowledged on AP score reports, which are sent to colleges and universities.

## AP Courses and Examinations

The College Board's AP Program currently offers 35 courses. Each course is developed by a committee composed of college faculty and high school AP teachers (College Board, AP Central, 2004b). All courses were offered in Texas public schools in the 2003-04 school year (Table A-1 in Appendix A). Table A-1 also includes the American Council on Education recommendations for minimum number of college credit hours to be granted for AP examination scores of 3 or higher (American Council on Education, 2003).

Although most students participate in AP courses before taking the corresponding examinations, students may take AP examinations without having taken the courses. The examinations, which are developed and administered through the College Board, are available statewide to schools making the
required administrative and financial arrangements. AP courses, on the other hand, are developed locally and depend on individual school and district resources. As a result, AP course offerings vary from district to district.

## AP Examination Fees

For the 2004-05 school year, the fee for each AP examination was $\$ 82$, of which schools retained $\$ 8$ for administering the examinations. The College Board offered a $\$ 22$ per-examination credit to qualified students with financial need, and schools were expected to forgo their $\$ 8$ administrative rebates for these candidates (College Board, AP Central, 2005c). The state and federal governments provided additional financial support to Texas students taking AP examinations (see the section, Access to Courses and Examinations).

## IB Program

The IB Diploma Programme is a comprehensive two-year curriculum developed by the International Baccalaureate Organisation (IBO) for high school students 16-19 years old. Students who successfully complete the program and perform well on examinations are awarded IB diplomas in addition to traditional high school diplomas. Colleges that recognize IB scores usually award credit or advanced placement, or both, to students who score in the 4-7 range on IB examinations (Table 1). Students can contact colleges or universities for information about their academic policies regarding IB courses and examinations.

## IB Courses and Examinations

The IB Diploma Programme curriculum is structured around a core of three elements: a Theory of Knowledge (TOK) course; Creativity, Action, and Service (CAS) activities; and an extended essay project based on original, independent research. Six academic subject groups build on these core elements: Language A1 (first language), Second Language, Individuals and Societies, Experimental Sciences, Mathematics and Computer Science, and The Arts. Diploma candidates must select one subject from each group; instead of a course from The Arts group, students may substitute a second course from one of the other five groups. The six subject-area courses are taken at either the Standard Level, which represents 150 teaching hours, or the Higher Level, which represents 240 teaching hours. Students must take at least three, but not more than four, subject-area courses at the Higher Level. This allows them sufficient freedom to investigate their favorite subjects in greater depth, while ensuring that they complete a broad curriculum during the two-year period (IBO, 2002).

To receive an IB diploma, candidates must accumulate at least 24 of 45 total examination points in the required subject areas, plus complete the TOK course, extended essay, and CAS activities at satisfactory levels. The maximum score of 45 points includes scores of 7 on each of the six subject examinations and 3 bonus points for an exceptional essay and exceptional performance in TOK. Students who do not satisfy all requirements or elect to take fewer than six subject examinations are awarded certificates for examinations completed with acceptable scores (IBO, 2002).

## IB Examination and School Fees

Participation in the IB Program carries fees for schools as well as student examinees. The following fees were for the 2004-05 school year. Schools wishing to participate in the program paid an application fee of $\$ 4,500$. Once authorized to participate, schools paid an annual subscription fee of $\$ 8,180$ to offer IB courses and examinations (IBO, 2005). For diploma candidates taking all six examinations in one session, the fee per student was $\$ 142$ plus $\$ 73$ for registration. For candidates seeking certificates and not diplomas, the fee per student was $\$ 79$ plus $\$ 51$ for registration. For each examination at the Higher or Standard Level, a $\$ 55$ fee applied. For each extended essay examination, a $\$ 35$ fee applied. Schools with diploma candidates paid a fee of $\$ 338$ for each examinee taking the Theory of Knowledge test. As was the case for AP examinees, the state and federal governments provided financial support to Texas students taking IB examinations (see the section, Access to Courses and Examinations).

## Benefits of Advanced Academic Programs

Academic opportunities such as AP and IB programs benefit students in a number of ways. High school students who participate in AP and IB courses and associated examinations are exposed to college-level academic content and are challenged to complete more rigorous coursework. Students with qualifying examination scores are provided the opportunity to earn college credit or advanced placement, depending on the college or university attended. Even without taking the examinations or without achieving qualifying examination scores, students who receive high school credit for AP or IB courses often receive more favorable consideration in the college admissions process than students who did not complete advanced high school courses (Lichten, 2000).

AP students are well-prepared for upper-level college courses and tend to perform better, on average, than non-AP students in upper-level college courses (College Board, 2001b; Dodd, Fitzpatrick, DeAyala, \& Jennings, 2002; Morgan \& Crone, 1993; Simms, 1982). Willingham and Morris (1986) found that, compared with students who did not take AP examinations, students who earned scores of 3 or above on AP examinations performed better in college courses, were more likely to maintain $B$ averages during their freshman years, were more likely to graduate with academic honors, and were accepted to doctoral programs more often. Morgan and Maneckshana (2000) reported that a majority of college students who had taken AP examinations graduated from college within four years, and a majority earned better than a 3.0 GPA . In addition, AP students who earned credit by examination, on average, performed better in subsequent advanced courses than students who took the prerequisite courses (Dodd et al., 2002; Casserly, 1986; Morgan \& Crone, 1993; Morgan \& Ramist, 1998).

AP and IB programs also benefit teachers, high schools, and the colleges and universities attended by program participants (College Board, 1996). Secondary school teachers who develop and implement AP and IB programs benefit from opportunities for professional development and the chance to teach challenging subjects to high-performing, motivated students. High schools benefit by expanding the academic choices for students who wish to take more rigorous courses and by
enhancing the quality and reputation of their college preparatory programs. Colleges and universities have an additional means of identifying and recruiting students who successfully met the demands of challenging, college-level courses.

## Access to, and Participation in, AP and IB Programs

The College Board recommends that high schools not select their AP students based on test or course grades alone (Camara \& Millsap, 1998). Mathews (2001) argued that all students should have ready access to AP courses, given the contributions of advanced academic courses to student success in college. For example, U.S. Education Department senior researcher Clifford Adelman (1999) studied a cohort of 8,700 students and found that the students most likely to finish college were not those who had the highest high school grades or test scores, but those who had taken the most difficult courses in high schools.

Both policymakers and researchers have called for greater student access to AP and IB courses, especially for minority students. Several studies have pointed to persistently low representation and performance on AP and IB examinations of African American and Hispanic students compared to other racial and ethnic minorities. A report released by the National Research Council (2002) recommended that advanced courses be made more readily available to minority students and to youths in rural and poor urban areas. In addition, the College Board recently prepared a best practices guide for achieving equity in the AP program, specifically encouraging minority student participation in the AP program (College Board, AP Central, 2004c).

## Uses of AP and IB Examination Results

## Indicators of State and National Progress

In recent years, AP examination results have been used as one of many indicators of educational progress and comparative performance. Because AP examinations measure higher-level learning in a broad array of subject areas, the results provide valuable information to high schools about preparing students for academic challenges beyond the secondary school level. States may use national participation and performance as benchmarks to compare their performance in preparing high school students for college-level courses. Comparisons of AP performance among states are most appropriate when AP examination participation rates, demographic characteristics of examinees, and AP policies are similar. The College Board prepares summary reports of national and state AP examination results (College Board \& ETS, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994b, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004).

## Indicators in the Texas Accountability System

Texas has in place an integrated state accountability system and an Academic Excellence Indicator System (AEIS) that support state goals for public education. These systems recognize,
reward, sanction, and intervene with school districts and campuses to ensure excellence in education for all students. Information used to rate and acknowledge districts and schools is compiled in AEIS reports. Grade 11-12 examinee participation and performance on AP and IB examinations is included as an indicator in the AEIS. More detailed information on this indicator is presented in the next section of this report.

## Access to Courses and Examinations

## Overview

Texas has made a concerted effort to facilitate student access to AP/IB courses and testing. The State Board of Education (SBOE), for example, encourages high schools to participate in the programs by allowing AP and IB courses to satisfy high school graduation requirements (Texas Administrative Code [TAC], Title 19, §§74.11-74.13, 2003). As a result, more high schools are offering AP and IB courses, more students are enrolling in courses, and more students are participating in examinations.

Both the state and federal governments have provided direct incentives to schools, teachers, and students who need financial assistance. Incentives for schools and teachers include program funds and professional development support for the teaching of advanced academic subjects. Incentives for students include financial assistance with examination fees.

## Texas Advanced Placement Incentive Program

Purpose. The Texas Advanced Placement Incentive Program (AP Incentive Program) was created in 1993 by the 73rd Texas Legislature to recognize and reward students, teachers, and schools that demonstrate success in achieving the educational goals of the state (Texas Education Code [TEC] §§35.001-35.008, 1994; 19 TAC $\S 74.29,1996$ ). IB was added to the program by the 74th Texas Legislature in 1995 (TEC §§28.051-28.058, 1996). In 2001, SBOE rules implementing the AP Incentive Program were amended to include IB (19 TAC §74.29, 2002).

Awards and subsidies. Six types of awards may be funded under the AP Incentive Program (TEC §28.053, 2004). Funding of components of the AP Incentive Program is subject to legislative appropriations (Table A-2 in Appendix A). In the current 2004-2005 fiscal biennium, a participating school may receive up to $\$ 100$ for each student who receives a score of at least 3 on an AP examination or 4 on an IB examination. Awards received by schools must be used for the sole purpose of academic enhancement, but school principals may establish campus teams to determine the use of funds awarded (TEC §28.053, §28.055, 2004). Teachers of Pre-AP, AP, Pre-IB, or IB courses currently may receive subsidies of up to $\$ 450$ for Pre-AP/IB, AP, or IB teacher training (Texas Center for AP/IB Initiatives, 2003a). A one-time $\$ 3,000$ equipment grant for providing a College Board AP course or IB course, based on need as determined by the commissioner of education, was funded from the 1998-1999 fiscal biennium through the 2002-2003 fiscal biennium. Three types of awards specified in the AP Incentive Program have never been funded by the state: (1) a one-time award of $\$ 250$ for teaching an AP or IB course for the first time; (2) a share of the teacher bonus pool proportional to the number of classes taught; and (3) a testing fee reimbursement,
not to exceed $\$ 65$, for a student receiving a score of at least 3 on an AP examination or 4 on an IB examination.

The AP Incentive Program also includes subsidies for college AP and IB examinations (TEC §28.054, 2004). The SBOE is responsible for adopting guidelines for determining financial need that are consistent with the definitions of financial need adopted by the College Board and the IBO (TEC §28.054, 2004). Approval of reimbursements has continued through the 2004-2005 fiscal biennium. In 1995, the SBOE approved up to $\$ 25$ from the Texas Education Agency (TEA) to be allocated for each student who meets the criteria for financial need. This amount increased to $\$ 30$ for the 2003-04 and 2004-05 school years (College Board, AP Central, 2005d). A student who qualifies under the College Board criteria for financial need is eligible for a $\$ 22$ fee reduction by the College Board; TEA will pay an additional $\$ 17$ for each examination taken by a student who qualifies for the College Board fee reduction (Texas Center for AP/IB Initiatives, 2003b).

With subsidies provided by the AP Incentive Program, AP examinees in 2003-04 who met financial need criteria and took AP courses corresponding with the tests paid no more than $\$ 5$ per AP examination. Support from the program also ensured that all other AP examinees taking AP courses in corresponding subject areas paid no more than $\$ 52$ per examination (College Board, AP Central, 2005d). Students in financial need who took IB courses corresponding with the tests paid no more than $\$ 5$ per examination in 2003-04; all other IB examinees paid no more than $\$ 24$ per examination.

History of state funding. Implementation of the AP Incentive Program occurred in the 1994-1995 fiscal biennium under the authority of TEC §35.001 (1994). During the first year of implementation, no funding was appropriated specifically for the program. Funds for two components-teacher training and examination fee reimbursement for students in financial need-came from the Gifted and Talented appropriation in fiscal year (FY) 1995. For the 1994-1995 fiscal biennium, a total of $\$ 1$ million of the appropriation for Gifted and Talented education was transferred and reappropriated to TEA for the purpose of implementing the AP Incentive Program (General Appropriations Act, Article III, Rider 67, 73rd Legislature). A separate and additional source of funding for the program was first recommended by the SBOE in 1994.

In the 1996-1997 fiscal biennium, $\$ 2$ million from the appropriation for Gifted and Talented education was allocated for the AP Incentive Program (General Appropriations Act, Article III, Rider 39, 74th Legislature). In the 1998-1999 fiscal biennium, a total of $\$ 3$ million was appropriated for the program. Two million dollars was again transferred from the Gifted and Talented appropriation; in addition, $\$ 500,000$ for each year of the biennium was allocated from funds appropriated for the Foundation School Program (General Appropriations Act, Article III, Rider 34 and Strategy B.1.1, 75th Legislature). In the 2000-2001 fiscal biennium, funding for the AP Incentive Program received a substantial increase to $\$ 21$ million: in addition to $\$ 2$ million allocated from the Gifted and Talented fund, \$8 million in FY 2000 and $\$ 11$ million in FY 2001 was allocated from the Foundation School Program (General Appropriations Act, Article III, Rider 30 and Strategy B.1.1, 76th Legislature).

For the 2002-2003 fiscal biennium, a total of \$34 million was appropriated for the AP Incentive Program. One million dollars per year was allocated from the Gifted and Talented fund for both the AP Incentive Program and for pre-AP/IB activities. From the Foundation School Program, $\$ 14.5$ million was allocated for FY 2002 and $\$ 17.5$ million was allocated for FY 2003. Additional support for the AP/IB Program came from funds appropriated for textbook expenditures (General Appropriations Act, Article III, Rider 29 and Strategy B.1.1, 77th Legislature; Texas Association for the Gifted and Talented, 2002). According to Rider 29, funding priority for teacher training was to be given to teachers at public school campuses not offering AP/IB courses. The rider also provided for making AP/IB courses available at as many public schools as possible, "without regard to the rural/urban status of the campus and the socioeconomic status of its students" (p. III-13).

For the 2004-2005 fiscal biennium, funding decreased somewhat to $\$ 27$ million; $\$ 13.5$ million per year was allocated from the Foundation School Program for both pre-AP/IB activities and the AP Incentive Program. Unlike in previous years, no additional funding was reappropriated from the Gifted and Talented fund. Any allocated funding for FY 2004 not used by August 31, 2004, was appropriated for FY 2005 (General Appropriations Act, Article III, Rider 26 and Strategy A.2.1, 78th Legislature). Based on Rider 26, TEA will give funding priority to examination fee subsidies for students and to training for teachers at public school campuses not offering AP/IB courses. Rider 26 also restates the goal of providing access to AP/IB courses at as many public schools as possible (p. III-11). For the 2006-2007 fiscal biennium, funding will remain at $\$ 27$ million; $\$ 13.5$ million per year allocated from the Foundation School Program for both pre-AP/IB activities and the AP Incentive Program (General Appropriations Act, Article III, Rider 27 and Strategy A.2.1, 79th Legislature).

History of federal funding. Although the federal AP fee assistance program was first authorized in the 1992 Higher Education Act, Congress did not fund the program until federal FY 1998. It was first implemented in 34 states, including Texas, to provide fee assistance for lowincome students, defined as students whose family incomes were at or below 150 percent of the Census Bureau poverty guidelines. The secretary of education expanded the program to include students with financial need taking IB examinations, as well. For federal FY 1999, Congress appropriated $\$ 4$ million for the AP and IB fee assistance program. Of the $\$ 4$ million, Texas received $\$ 300,000$ for May 2000 examinations. For May 2001 examinations, Texas' share of federal monies increased to $\$ 379,000$. For the 2003-04 school year, 45 states, four territories, and the District of Columbia received funds totaling $\$ 22$ million through the U.S. Department of Education's Advanced Placement Incentive Program (College Board, AP Central, 2005e). These grants were designed to provide assistance to students from low-income families, encourage their enrollment and participation in AP, and increase the availability of AP courses in schools serving low-income areas (College Board, AP Central, 2005c).

In addition to receiving federal support for AP and IB examinees with financial need, Texas competed successfully for special federal funds to develop initiatives to increase participation of minority and other historically disadvantaged students in AP and IB programs. The Texas Center for AP/IB Initiatives opened in July 2001 and is funded by a three-year, $\$ 3.5$ million grant from the
U.S. Department of Education (Texas Center for AP/IB Initiatives, 2003c). The goal of the center is to increase the participation of underrepresented and underserved populations in AP and IB programs in Texas. Texas also received almost $\$ 200,000$ to establish a Spanish-language Middle School AP Project in 1999-00 and support its continued development through 2002-03. Other current center projects include AP/IB focus groups, which bring together administrators and teachers throughout the state to discuss issues regarding the future of AP and IB programs; the AP Baldrige in Education Project, which helps to incorporate the Baldrige management assessment tools in AP classrooms; the PSAT/NMSQT Pilot Program, which encourages testing all 10th graders on the PSAT/NMSQT to help identify students for participation in Pre-AP and AP courses; and the AP Thinking Maps Project, which provides visual tools called Thinking Maps to help students achieve higher AP examination scores (Texas Center for AP/IB Initiatives, 2003e).

## Academic Excellence Indicator System (AEIS) Measures

Texas has in place a state accountability system and an Academic Excellence Indicator System (AEIS) to recognize, reward, and sanction districts and campuses. Three types of indicators are used in AEIS reports: base, gold performance acknowledgement, and report-only (TEA, 2004c, 2004d).

In April 1996, the SBOE approved inclusion of an indicator in the AEIS of Grade 11 and 12 student participation in, and performance on, AP examinations. The indicator was made up of three measures to be reported at the district, region, and state levels: the percentage of non-special education students taking at least one AP examination, the number of examinations with scores of 3 or above, and the number of examinees with at least one score of 3 or above. At the time, not all schools participated in the AP program. As a result, the indicator was defined as report-only and not used for campus and district ratings. The SBOE recommended the incorporation of IB participation and performance within two years.

In the fall of 1998, the indicator was revised to include IB and was defined as follows:

- the percentage of non-special education 11th and 12th graders taking at least one AP or IB examination;
- the percentage of non-special education examinees scoring 3 or above on at least one AP examination or 4 or above on at least one IB examination; and
- the percentage of total AP examinations with scores of 3 or above and IB examinations with scores of 4 or above.

In 2001, the Texas Legislature enacted the Gold Performance Acknowledgement (GPA) system to acknowledge districts and campuses for high performance on indicators not used to determine accountability ratings (TEC, $\S 39.0721,2001$ ). Included in the GPA is an AP/IB indicator made up of two measures: the percentage of non-special education students who take an AP or IB examination and the percentage of non-special education examinees at or above the criterion score on at least one AP or IB examination (TEC §39.0721, 2001). The percentage of AP or IB examinations with high
scores was retained as a report-only performance indicator (TEA, 2004c). The criteria for acknowledgement on the GPA indicator are as follows:

- non-special education 11th and 12th graders taking at least one AP or IB examination must represent 15 percent or more of the non-special education students enrolled in 11th and 12th grades; and
- 50 percent or more of those non-special education examinees must have at least one score of 3 or above on an AP examination or 4 or above on an IB examination.

## Reporting Information and Data Sources

## Public and Non-Public Schools

Examination results for Texas 11th and 12th graders are presented in two sections of this report. One section presents results for Advanced Placement (AP) and International Baccalaureate (IB) examinations for Texas public school students only. The other section presents AP examination results for public and non-public high school students combined for Texas and the United States. IB examination results are not presented in the latter section because they are available for public schools only. Data in this report are aggregated at various levels (Table 2).

| Table 2 <br> Levels of Data Reporting |  |
| :--- | :--- |
| Unit | Levels |
| Examination | Advanced Placement (AP) <br> International Baccalaureate (IB) <br> AP, IB, or both (Academic Excellence <br> Indicator System [AEIS]) |
| Measure | Participation rate <br> Examinee profile <br> Mean test score <br> Percentage meeting criterion (AEIS) |
| Type of school | Public <br> Public and non-public |
| Student group | All students <br> By ethnicity <br> By gender |
| Geographic area | Texas <br> United States |

## Data Sources

AP test data for Texas public high school examinees were provided to the Texas Education Agency (TEA) by the College Board. IB test data for Texas public high school examinees were provided to TEA by the International Baccalaureate Organisation (IBO) in Cardiff, Wales, Great Britain. AP and IB results for Texas public high school examinees in previous years were available in TEA reports (1995, 2000a, 2000b, 2001, 2002, 2003, 2004a). AP results for all public and non-public school examinees in Texas and the United States were available in summary reports released annually by the College Board and Educational Testing Service (1987, 1988, 1989, 1990, 1991, 1992, 1993,

1994b, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004). Comparable reports were not available for IB performance (cf. IBO, 1995).

Student grade, ethnicity, and gender, as well as other relevant district, campus, and student information, were available in the TEA Public Education Information Management System (PEIMS). The College Board also collects student grade level, ethnicity, and gender information for AP examinees; these data were used when they were not available in PEIMS. The IBO does not collect this information.

## Definitions

The College Board AP Program currently offers 35 examinations, and students may take each examination once per school year. For each of these examinations, a valid score is a score in the $1-5$ range. Students who have valid scores for at least one examination taken in the current school year are counted as examinees. Counts of examinations are based on the number of examinations taken in the current school year that received valid scores.

For two AP examinations, Music Theory and Calculus BC, students receive examination subscores in addition to overall examination scores. Students who take the Music Theory examination receive aural and non-aural subscores. Students who take the Calculus BC examination receive Calculus AB subscores. For 1994-95 through 2002-03, subscores are included along with overall AP examination scores in calculating numbers and percentages of: examinations taken, examinations with scores in the 3-5 range, and examinees with scores in the 3-5 range. Beginning with 2003-04, subscores are not included in the calculations. Based on the 2003-04 data, the revision reduced the number of examinations taken by 4,565 , the number of examinations with scores in the 3-5 range by 3,422 , and the number of examinees with scores in the 3-5 range by 156 .

There are two AP Physics C examinations: the Mechanics examination and the Electricity and Magnetism examination. Students can take either of the examinations or both. In Table A-10 in Appendix A, when students have scores for both examinations, only one is included in calculations. In all other tables, results for both examinations are included in calculations.

AP courses can be one or more semesters in length. Completion of an AP course is defined as completion of the final semester of the course. For example, completion of AP U.S. History, a twosemester course, is defined as completion of the second semester of the course. To complete a course successfully, a student must meet "... the standard requirements of the course, including demonstrated proficiency in the subject matter ..." (19 Texas Administrative Code §74.26, 2004).

Table A-11 in Appendix A shows the number of AP examinations taken by students who had also completed the corresponding AP courses during the 2003-04 school year. Only examinations taken with their corresponding courses are included. In earlier editions of this report, the table presented data for all school years available, starting with 1992-93. The calculation included all examinations taken by a student who took any examination and its corresponding course.

## Results for Texas Public Schools

## Statewide Results and Trends: All Students

## Advanced Placement (AP) Participation and Performance

Between school years 1994-95 and 2003-04, the percentage of 11th and 12th graders taking AP examinations rose from 6.8 percent to 17.2 percent (Figure 1 on this page and Table A-3 in Appendix A). The percentages of AP examinees and AP examinations with scores in the 3-5 range decreased between 2002-03 and 2003-04 (Figure 2 on page 18 and Table A-3 in Appendix A).

Figure 1
Advanced Placement (AP) Examination Participation, Grades 11-12, by Ethnicity, Texas Public Schools, 1994-95 Through 2003-04

Source. College Board and Texas Education Agency.

## International Baccalaureate (IB) Participation and Performance

As with the AP program, public school participation in the IB program increased between 1994-95 and 2003-04, although on a much smaller scale (Table A-4 in Appendix A). In 2003-04, a total of 1,388 Grade 11-12 students in 22 Texas public schools took 3,935 IB examinations, up from the 429 students in 11 schools taking 910 IB examinations in 1994-95. Compared to 2002-03, the

Figure 2
Advanced Placement (AP) Examinee Performance, Grades 11-12, by Ethnicity, Texas Public Schools, 1994-95 Through 2003-04

Source. College Board and Texas Education Agency.
percentage of Texas public school IB examinees earning scores in the 4-7 range increased from 87.8 to 88.6 percent in 2003-04. The percentage of examinations with scores in this range decreased from 79.7 percent in 2002-03 to 78.6 percent in 2003-04. The most popular examination in 2003-04 was English A1, which accounted for 19.4 percent of Texas public school IB examinations, followed by Spanish B, History: Americas Higher Level, and Physics (Table A-5 in Appendix A). Across these four academic areas, mean scores were highest on Spanish B and English A1.

## AP/IB Combined Participation and Performance

A combination of AP and IB participation and performance data yields results similar to those for AP alone (Table A-6 in Appendix A). If the participation rate of IB examinees is included with that of AP examinees, as reported in the Academic Excellence Indicator System (AEIS), the percentage of students tested rose from 8.6 percent in 1996-97 to 17.4 percent in 2003-04. Between school years 1998-99 and 2002-03, as participation increased, state funding for AP/IB programs also increased from approximately $\$ 1.5$ million to $\$ 18.5$ million. Funding for AP/IB programs was reduced to $\$ 13.5$ million in 2003-04 (Figure 3); participation continued to increase (Figure 1 on page 17). Combining IB examinee and examination performance with AP results yielded slightly higher numbers and percentages than observed for AP performance alone (Table A-6 in Appendix A).

Figure 3

## Statewide Results and Trends: By Ethnicity

## AP Participation and Performance

The rates at which Hispanic and African American public school students participated in AP examinations climbed steadily between 1994-95 and 2003-04 (Table 3 on page 20, Figure 1 on page 17, and Table A-3 in Appendix A). In 2003-04, 13.1 percent of Hispanics and 9.1 percent of African Americans took AP examinations, compared to 12.1 percent and 7.6 percent in 2002-03, respectively. Most notably, the participation rate for Hispanics rose by 9.3 percentage points between 1994-95 and 2003-04. Despite gains, participation rates for these two groups of students remained low relative to the 2003-04 rates for Whites (20.8\%) and Asian/Pacific Islanders (39.5\%).

Compared to 2002-03, the percentages of Grade 11-12 Texas public school AP examinees with scores in the 3-5 range decreased in 2003-04 for all ethnic groups (Figure 2 on page 18 and Table A-3 in Appendix A). Among AP examinees, over two-thirds of Asian/Pacific Islanders, nearly three-fifths of Whites, more than two-fifths of Native Americans and Hispanics, and more than a fourth of African Americans received scores in the 3-5 range.

Table 3
Advanced Placement (AP) Examination Participation and Performance, Grades 11-12, Texas Public Schools, 2003-04

| Group | Students | Examinees |  | Examinees scoring 3-5 on examinations |  | Examinations | Examinations with scores of 3-5 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Participation rate (\%) |  |  |  |  |  |
|  |  | Number |  | Number | Percent |  | Number | Percent |
| African American | 58,548 | 5,302 | 9.1 | 1,375 | 25.9 | 9,152 | 2,158 | 23.6 |
| Asian/Pacific Islander | 16,437 | 6,486 | 39.5 | 4,384 | 67.6 | 17,219 | 10,589 | 61.5 |
| Hispanic | 161,250 | 21,166 | 13.1 | 9,443 | 44.6 | 36,463 | 12,403 | 34.0 |
| Native American | 1,275 | 232 | 18.2 | 99 | 42.7 | 438 | 162 | 37.0 |
| White | 212,755 | 44,217 | 20.8 | 26,137 | 59.1 | 89,128 | 48,685 | 54.6 |
| Female | 232,912 | 44,888 | 19.3 | 23,399 | 52.1 | 84,837 | 39,432 | 46.5 |
| Male | 217,353 | 32,694 | 15.0 | 18,134 | 55.5 | 67,888 | 34,711 | 51.1 |
| State | 450,265 | 77,582 | 17.2 | 41,533 | 53.5 | 152,725 | 74,143 | 48.5 |

Source. College Board and Texas Education Agency.
Note. Final IB results data for 2003-04 were obtained from the College Board in March 2005. Grade level, gender, and ethnicity were taken from the TEA Public Education Information Management System, as available. Thus, the sums of examinees by gender and ethnic group may be slightly less than the total for all examinees.

A similar pattern of performance is seen when AP examinations are analyzed by ethnicity (Table A-3 in Appendix A). The percentages of examinations with scores in the 3-5 range decreased in 2003-04 from the prior year for all ethnic groups.

## IB Participation and Performance

Texas public school Asian/Pacific Islanders had the highest IB examination participation rate in 2003-04 (1.7\%) among all ethnic groups (Table 4). In addition, a higher number of Asian/Pacific Islanders (273) took IB examinations than did African Americans (89) or Hispanics (190). From 2002-03 to 2003-04, the number of IB examinees increased for all ethnic groups except African Americans (Table A-4 in Appendix A).

The percentages of Texas public school IB examinees earning scores in the 4-7 range increased from 2002-03 for all ethnic groups except Whites, who decreased by two-tenths of a percentage point (Table A-4 in Appendix A). Asian/Pacific Islanders and Whites had the highest percentages of examinees scoring in the $4-7$ range ( $92.3 \%$ and $89.5 \%$, respectively), followed by Hispanics ( $84.7 \%$ ), and African Americans (76.4\%).

The percentages of examinations with scores in the 4-7 range decreased from 2002-03 to 2003-04 for all ethnic groups except Hispanics. The percentage of examinations with scores of 4-7 was highest for Asian/Pacific Islanders and Whites ( $82.7 \%$ and $80.8 \%$, respectively), followed by Hispanics (70.7\%), and African Americans (59.0\%).

Table 4
International Baccalaureate (IB) Examination Participation and Performance, Grades 11-12, Texas Public Schools, 2003-04

| Group | Students | Examinees |  | Examinees scoring <br> 4-7 on examinations |  | Examinations | Examinations with scores of 4-7 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Participation rate (\%) |  |  |  |  |  |
|  |  | Number |  | Number | Percent |  | Number | Percent |
| African American | 58,548 | 89 | 0.2 | 68 | 76.4 | 234 | 138 | 59.0 |
| Asian/Pacific Islander | 16,437 | 273 | 1.7 | 252 | 92.3 | 846 | 700 | 82.7 |
| Hispanic | 161,250 | 190 | 0.1 | 161 | 84.7 | 508 | 359 | 70.7 |
| Native American | 1,275 | - | - | - | - | - | - | - |
| White | 212,755 | 832 | 0.4 | 745 | 89.5 | 2,341 | 1,891 | 80.8 |
| Female | 232,912 | 789 | 0.3 | 701 | 88.8 | 2,168 | 1,709 | 78.8 |
| Male | 217,353 | 598 | 0.3 | 528 | 88.3 | 1,766 | 1,383 | 78.3 |
| State | 450,265 | 1,388 | 0.3 | 1,230 | 88.6 | 3,935 | 3,093 | 78.6 |

Source. International Baccalaureate Organisation (IBO) and Texas Education Agency (TEA).
Note. Final IB results data for 2003-04 were obtained from IBO in August 2004. Grade level, gender, and ethnicity were taken from the TEA Public Education Information Management System, as available. Thus, the sums of examinees by gender and ethnic group may be slightly less than the total for all examinees. Statistics based on fewer than five examinees are masked with a dash (-)

## Examinee Population Profile

Historically, African American and Hispanic students have accounted for smaller proportions of the AP and IB examinee populations than of enrolled students (Figure 4 on page 22 and Tables A-3 and A-4 in Appendix A). This trend continued in 2003-04. African Americans made up 13.0 percent of public school students in Grades 11-12 but only 6.8 percent of AP examinees and 6.4 percent of IB examinees. Similarly, Hispanics made up 35.8 percent of Grade 11-12 enrollment but only 27.3 percent of AP examinees and 13.7 percent of IB examinees.

Encouraging changes are evident. The proportion of African American AP examinees increased from 3.5 percent in 1994-95 to 6.8 percent in 2003-04, and the proportion of Hispanic examinees increased from 16.9 to 27.3 percent. Although the proportion of African American IB examinees decreased from 8.9 percent to 6.4 percent during the same period, the proportion of Hispanic IB examinees more than doubled, from 6.3 percent to 13.7 percent.

## Statewide Results and Trends: By Gender

## AP Participation and Performance

Between 1994-95 and 2003-04, the percentage of 11th- and 12th-grade female students taking AP examinations in Texas public schools increased more rapidly (from 7.5\% in 1994-95 to 19.3\% in 2003-04) than the percentage of 11th- and 12th-grade male students taking AP examinations

Figure 4
Enrollment and Examinees, Grades 11-12, By Ethnicity, Texas Public Schools, 1994-95 and 2003-04

[^0](from 6.1\% to 15.0\%) (Table A-3 in Appendix A). As a result, the gap between the participation rates of the two genders widened from 1.4 percentage points in 1994-95 to 4.3 percentage points in 2003-04.

Compared to 2002-03, the percentages of female and male AP examinees earning scores in the $3-5$ range decreased slightly in 2003-04. Between 1994-95 and 2003-04, male examinees consistently outperformed female examinees.

## IB Participation and Performance

Between 1994-95 and 2003-04, IB examination participation rates increased from one-tenth of a percent to three-tenths of a percent for both male and female examinees. The percentage of female examinees scoring in the $4-7$ range decreased from 89.3 percent in 2002-03 to 88.8 percent in 2003-04. At the same time, the percentage of male examinees scoring in the $4-7$ range increased from 85.9 percent to 88.3 percent.

## Examinee Population Profile

Between 1994-95 and 2003-04, males were consistently underrepresented among AP and IB examinees (Figure 5 on page 24 and Tables A-3 and A-4 in Appendix A). In 2003-04, for example, the proportion of male AP examinees (42.1\%) was 6.2 percentage points lower than the proportion of male students in enrollment (48.3\%). Between 1994-95 and 2003-04, the proportion of female AP examinees was consistently higher than the proportion of female students in enrollment. In 2003-04, the proportion of female AP examinees was 57.9 percent, and the proportion of females in enrollment was 51.7 percent. Male underrepresentation and female overrepresentation were similar for IB examinees.

## Advanced Courses and Examination Participation and Performance

## Advanced Course Participation

The period from 1992-93 through 2003-04 was marked by an increase in the number of Texas public school students participating in courses considered academically advanced (Table A-7 in Appendix A). During this time, the participation rate in College Board AP courses increased more rapidly than in other advanced courses. The number of students in Grades 9-12 completing at least one AP course increased from 11,402 in 1992-93 to 148,431 in 2003-04, whereas the number of students completing other advanced courses increased from 93,149 to 179,630. The percentage of all advanced courses taken that were AP courses increased from 11.7 percent in 1992-93 to 55.4 percent in 2003-04.

Enrollment and Examinees, Grades 11-12, by Gender, Texas Public Schools, 1994-95 and 2003-04

$\square$ Enrollees $\square$ AP Examinees $\quad$ IB Examinees

[^1]
## Participating Schools

According to data collected through the Texas Education Agency (TEA) Public Education Information Management System, the increase in the numbers of course takers and courses taken accompanied an increase in the number of schools offering AP courses. Between 1992-93 and 2003-04, the number of Texas public schools with students completing AP courses rose from 158 to 1,114 , which is 56.1 percent of the state's 1,985 schools that serve 11th and 12th graders (Table 5 on this page and Figure 6 on page 26). During the same period, the number of schools with students completing both AP courses and examinations grew from 135 to 949 ( $47.8 \%$ of schools), while the number of schools with students taking AP examinations but not completing AP courses decreased from 288 to 45 ( $2.3 \%$ of schools).

Table 5
Texas Public Schools with Grades 9-12 Advanced Placement (AP) Courses and Examinations, 1992-93 Through 2003-04

| Year | Examinations | Courses | Both examinations <br> and courses | Examinations <br> but no courses | Courses but no <br> examinations |
| :--- | ---: | ---: | ---: | ---: | ---: |
| $1992-93$ | 426 | 158 | 135 | 288 | 23 |
| $1993-94$ | 454 | 262 | 215 | 241 | 47 |

Source. College Board and Texas Education Agency (TEA).
Note. Final semester completion of courses was used as the basis for numerical counts. Counts for the number of schools with AP examinations and the number of schools with AP courses in 1994-95 vary slightly from preliminary counts reported for these data in TEA (1995).

## Examinees and Advanced Courses

Not all AP examinees take AP or other advanced academic courses, nor do all students who participate in advanced courses ultimately take AP examinations. Between 1992-93 and 2003-04, consistently high percentages of AP examinees completed at least one advanced course (Table A-8 in Appendix A). The percentage of examinees taking at least one advanced course ranged between 85.3 and 93.7 percent. In 1992-93, about a third of examinees (33.7\%) completed AP courses, and an additional half (51.6\%) completed another type of advanced course. In 2003-04, 87.2 percent of AP examinees completed AP courses.

Figure 6
Texas Public Schools with Grades 9-12 Advanced Placement (AP) Courses and Examinations, 1992-93 Through 2003-04

Source. College Board and Texas Education Agency (TEA).
Note. Final semester completion of courses was used as the basis for numerical counts. Counts for the number of schools with AP examinations and the number of schools with AP courses in 1994-95 vary slightly from preliminary counts reported for these data in TEA (1995).

The percentage of students who completed advanced courses and took AP examinations also increased between 1992-93 and 2003-04 (Table A-9 in Appendix A). Participation of students with AP courses in AP examinations rose steadily from 41.6 percent in 1992-93 to 57.6 percent in 2003-04. The sustained growth of participation in advanced courses and AP examinations was accompanied by state funding increases in the 2000-2001 and 2002-2003 fiscal biennia. State funding decreased in the 2004-2005 biennium, and participation continued to rise.

## Correspondence Within Subjects

Between 1992-93 and 2003-04, the relationship between AP course completion and AP examination participation changed dramatically (Table A-10 in Appendix A). In 1992-93, just over a quarter of students who took examinations (27.2\%) had previously completed AP courses in the same subjects. By 2003-04, the percentage was over three-quarters (78.3\%). Similarly, in 1992-93, only 34.8 percent of students who completed AP courses participated in the corresponding AP examinations. By 2003-04, this had increased to over half of those who completed AP courses (51.8\%).

In over half of the subject-area examinations that had at least 500 students participating, students who completed the corresponding AP courses outperformed those who did not (Table A-12 in

Appendix A). Of examinees who did not take corresponding AP courses, a large percentage (22.4\%) took the Spanish Language test. The average score for the Spanish Language examinees who had not taken AP Spanish was 3.67, the highest performance on any subject for students without AP courses. The average score for students who had taken AP Spanish was 3.54, the highest performance on any subject for students with AP courses.

## Results for Texas and the United States

## Advanced Placement (AP) Examination Trends

In school year 2003-04, a total of 101,115 students in 1,198 Texas public and non-public schools took 183,130 AP examinations (Table 6). This put Texas second in the nation, behind California, in the number of AP examinees and the number of AP examinations taken (Table A-13 in Appendix A). Texas was 10th among the states in the percentage increase (11.3\%) in number of examinees from the previous year.

From 1986-87 to 2003-04, participation in AP examinations increased more rapidly in Texas than in the nation as a whole (Table 6). The number of Texas AP examinees in 2003-04 $(101,115)$ was about 11.5 times greater than in 1986-87 ( 8,792 ), whereas the national number increased over fourfold, from 259,222 to 1,081,102.

Source. College Board and Educational Testing Service (1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994b, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004) and personal communication with P. Williamson, College Board Southwest Regional Office, November 10, 1997.
Note. Data are based on public and non-public examinees.

During the same time period, the number of examinations taken by Texas students increased from 12,506 to 183,130 , and the number of examinations taken nationally increased from 364,804 to 1,852,700.

The number of Texas public and non-public schools participating in AP examinations also rose during this period, roughly quadrupling from 285 to 1,198 . Nationally, the number of participating schools nearly doubled, from 7,776 to 14,144 . The percentage of Texas schools participating in AP examinations in 2003-04 (70.2\%) exceeded the national percentage (60.6\%) (Table A-13 in Appendix A). Massachusetts had the highest percentage of participating schools (87.2\%), and North Dakota had the lowest percentage of participating schools (10.9\%).

Along with increases in numbers of examinees and examinations, Texas experienced a dramatic increase in the number of AP scores in the 3-5 range over the period, from 8,897 in 1986-87 to 93,321 in 2003-04 (Table 6 on page 29). Compared to 2002-03 , the percentage of Texas AP examinations with high scores decreased from 51.9 percent to 51.0 percent in 2003-04. Nationally, 61.6 percent of examinations in 2003-04 had scores in the 3-5 range.

Declines in the percentages of high AP examination scores may be related to rising participation rates. In recent years, greater numbers of schools have offered AP programs for the first time. As a result, a growing proportion of AP examinees are students taking AP courses and examinations for the first time. These students may be less prepared than students who have taken AP courses and examinations previously. AP examinees who have had progressively rigorous academic preparation may have some performance advantage over students who have not (College Board, 2000).

## AP Examination Profile

Although 35 AP examinations are offered in 20 disciplines, the three examinations with the largest numbers of test takers in 2003-04 were the same in Texas and the United States: English Language and Composition, U.S. History, and English Literature and Composition (Table A-14 in Appendix A). In 2003-04, for the second consecutive year in Texas, the number of students taking AP Spanish Language examinations exceeded the number taking Calculus AB examinations. Nationally, Calculus AB remained the fourth most popular AP examination. The top four examinations accounted for over half ( $52.0 \%$ ) of all AP examinations taken in 2003-04 by Texas public and non-public school students and nearly half ( $46.6 \%$ ) of all AP examinations taken by students in the United States. The English Language and Composition examination showed the greatest difference in participation rates between Texas (18.7\%) and the United States (10.6\%).

In 2003-04, the three AP examinations with the highest percentage of scores in the 3-5 range in Texas were Spanish Language, European History, and Calculus BC. In the United States, the three AP examinations with the highest percentage of scores in the 3-5 range were Calculus BC, Spanish Language, and Psychology. Compared to the United States, Texas had higher percentages of examinees with scores in the 3-5 range on examinations of Spanish Language, European History, Physics C: Mechanics, Studio Art: Drawing, and Studio Art: 2D Design.

## AP Examinee Profile

Compared to the United States, Texas had more than twice the percentage of Hispanic AP examinees in 2003-04 ( $29.1 \%$ versus $12.0 \%$ ) and a similar percentage of African American examinees ( $5.9 \%$ versus $5.2 \%$ ) (Table 7). Higher proportions of historically lower-scoring, underprepared groups of examinees may contribute to the state's lower percentage of high AP examination scores (Table 6 on page 29). This result is not unexpected given the state priority of increasing student access to advanced academic opportunities in high school.

Table 7
Advanced Placement (AP) Examinees, by Grade Level, Gender, and Ethnicity, for Texas and the United States, 2003-04

|  | Number |  |  | Percent |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | Texas | U.S. |  | Change in percent, <br> 2002-03 to 2003-04 |  |  |
| Examinee group | 15,225 | 136,778 |  | Texas | U.S. | Texas |

Note. Data are based on public and non-public examinees. Statistics for examinees who were not in Grades 9-12 are excluded from the grade-level groups above. Parts may not add to 100 percent because of rounding.

## Considerations for Educators

## Overview

In high-quality Advanced Placement (AP) and International Baccalaureate (IB) programs, high school students explore academic subjects in depth and are exposed to college course content. Scores from AP and IB examinations represent objective, external, and standardized measurements for predicting student performance in college courses on the same subjects.

The overall value of college-level learning opportunities offered through AP and IB programs depends on the quality and rigor of the advanced courses and the effectiveness of the teaching. Ultimately, such higher-level learning should increase the number of Texas high school graduates who are academically well-prepared to meet the challenges of college and university studies. The following strategies have been identified for enhancing student access to, and performance in, AP and IB courses and examinations.

## Student Access to AP and IB Courses and Examinations Within Schools

## Access to Courses

High schools use a variety of approaches for identifying students who may be successful in AP courses. The following strategies may prove useful.

- Use procedures such as teacher recommendations, student self-nominations and parent requests, previous coursework, grades in relevant courses, and achievement test scores to identify and place students in AP courses (Mathews, 2001).
- Evaluate previous coursework, grades, and performance on large-scale assessments to identify students who may be successful in AP courses and to inform decisions about AP subject and course offerings (Camara \& Millsap, 1998; Texas Center for AP/IB Initiatives, 2003f).

An additional challenge for schools and districts that want to increase student access to AP and IB courses is to develop programs that will effectively prepare a broad range of middle and high school students for exposure to college-level academics. Such programs might include Pre-AP, Pre-IB, or other relevant prerequisite courses designed to prepare a diverse group of students to succeed in AP and IB courses. Some local education communities have used the following approaches.

- Form AP Vertical Teams of educators across middle and high school grades and across content areas to bring coherence to the advanced academic program (College Board, 2004).
- Evaluate district and school policies governing access to prerequisite courses, as well as AP and IB courses, to ensure that the opportunity for participation in such courses is open to all students (Camara, Dorans, Morgan, \& Myford, 2000).

## Access to Examinations

As is the case for any examination not required of all students, the extent of student participation in AP and IB examinations can be affected by a variety of factors. One important factor is the fee charged per examination taken. Although the fees for examinations are much less than the cost of taking college courses, the fees can still be prohibitive for many. Resources for students with financial needs in Texas include:

- College Board fee reductions for AP examinations (College Board, AP Central, 2005c);
- available funding in the Texas AP Incentive Program (TEA, 2004b);
- federal funding for AP and IB programs (Texas Center for AP/IB Initiatives, 2003d); and
- other locally-sponsored fee reductions and waivers (Hager, Antinone, Fleisher, \& Vinson, 1997).

For more information on funding, refer to the section, Access to Courses and Examinations.

## Student Performance in AP and IB Courses and Examinations

When considering ways to improve student performance in AP and IB courses and examinations, policymakers and practitioners might consider the following research findings.

- On average, AP examinees who have taken the corresponding AP courses either outscore or perform about the same as those who have not taken the corresponding courses (TEA, 1995, 2000a, 2000b, 2001, 2002, 2003, 2004a). For more information, refer to the section, Advanced Courses and Examination Participation and Performance.
- AP examinees who have had progressively rigorous academic preparation and experience with examinations such as the PSAT/NMSQT, SAT I, and ACT, may have some performance advantage over students who have not (College Board, 2000).
- Schools and districts concerned about student performance in AP or IB programs might pay special attention to professional development. Henderson, Winitzky, and Kauchak (1996) found that training teachers to effectively prepare students in AP courses for AP examinations can have a major influence on examination performance. They also found that effective teachers have more elaborate and organized knowledge of their subject material than less effective teachers.

| Incentive description | $\begin{aligned} & 1994- \\ & 1995 \end{aligned}$ | $\begin{aligned} & 1996- \\ & 1997 \end{aligned}$ | $\begin{aligned} & 1998- \\ & 1999 \end{aligned}$ | $\begin{aligned} & 2000- \\ & 2001 \end{aligned}$ | $\begin{aligned} & 2002- \\ & 2003 \end{aligned}$ | $\begin{aligned} & 2004- \\ & 2005 \end{aligned}$ |
| School |  |  |  |  |  |  |
| A school may receive a one-time $\$ 3,000$ equipment grant for providing a college-level AP or IB course. Schools are selected based on need as determined by the commissioner of education. | No | No | Yes | Yes | Yes | No |
| A school may receive $\$ 100$ for each student who scores a 3 or higher on a college-level AP examination or 4 or higher on an IB examination. | No | No | No | Yes | Yes | Yes |
| Teacher |  |  |  |  |  |  |
| A teacher of AP or IB courses may receive a subsidy of up to $\$ 450$ for AP or IB teacher training. | No | Yes | Yes | Yes | Yes | Yes ${ }^{\text {a }}$ |
| A teacher may receive a one-time award of $\$ 250$ for teaching a college-level AP or IB course for the first time. | No | No | No | No | No | No |
| A teacher may receive a share of the teacher bonus pool, which shall be distributed by the teacher's school in shares proportional to the number of courses taught. Fifty dollars may be deposited in the teacher bonus pool for each student enrolled in the school who scores a 3 or above on an AP examination or 4 or above on an IB examination. | No | No | No | No | No | No |
| Student |  |  |  |  |  |  |
| A student receiving a score of 3 or above on an AP examination or 4 or above on an IB examination may receive reimbursement, not to exceed $\$ 65$, for the testing fee. | No | No | No | No | No | No |
| The Texas Education Agency (TEA) may pay for all AP and IB examinations taken by students who take an AP/IB course (as designated in the Public Education Information Management System) in the subject of the test. | No | No | Yes | Yes | Yes | Yes |
| Students in financial need may receive further federal and state fee reductions. | Yes | Yes | Yes | Yes | Yes | Yes ${ }^{\text {b }}$ |

Source. College Board and Texas Education Agency.
Note. Final IB results data for 2003-04 were obtained from the College Board in March 2005. Grade level, gender, and ethnicity were taken from the TEA Public Education Information Management System, as available. Thus, the sums of examinees by gender and ethnic group may be slightly less than the total for all examinees.

Source. College Board and Texas Education Agency.
Note. Last semester completion of courses was used as the basis for numerical counts. Only examinations with more than 500 AP examinees are shown. AP examinations were linked to corresponding AP courses by student to obtain the statistics. Thus, some counts may be slightly imprecise because data needed for perfect student matching were not available.

Table A-13
Advanced Placement (AP) Examination Results, Grades 11-12, by State and for the United States, 2003-04

| State |  |  | Enrollment |  | Examinees |  | Examinations |  |

Note. 't' indicates masking is applied because of the small number of students tested.
'h' indicates masking is applied because of the small number of examinees scoring at or above criterion.
' $m$ ' indicates masking is applied because small numbers can be imputed from other district or campus counts.
'-' indicates masking is applied because of the small number of students tested or scoring at or above criterion.

Note. 't' indicates masking is applied because of the small number of students tested.
'h' indicates masking is applied because of the small number of examinees scoring at or above criterion.
'm' indicates masking is applied because small numbers can be imputed from other district or campus counts.
'-' indicates masking is applied because of the small number of students tested or scoring at or above criterion.

## Notes on Appendix B

Of the 1,091 Texas public school districts and charter schools with Grade 11-12 enrollment in school year 2003-04, a total of 691 districts had students who took at least one Advanced Placement (AP) examination, and 19 of these 691 districts also had students who took at least one International Baccalaureate (IB) examination. In addition, a total of 597 districts had five or more AP examinees in 2003-04, an increase from 575 districts in 2002-03. More than two-thirds of these 597 districts (397) had five or more examinees earning scores of 3 or above.

The 2003-04 AP examination results listed for each district and campus in Table B-1 include: the total number of students enrolled in Grades 11-12, number and percentage of 11th and 12th graders who took at least one AP examination, number and percentage of examinees earning at least one score within the 3-5 range, total number of examinations taken, and number and percentage of AP examinations receiving scores in the 3-5 range. Similarly, IB results for 2003-04 are listed by district and campus in Table B-2; however, columns pertaining to the number and percentage of examinees and examinations refer to scores within a 4-7 range. Table B-3 contains combined Texas AP and IB examination results in 2003-04 for those districts and campuses in which both AP and IB examinations were offered.

In Table B-1, AP participation and performance data are not presented for districts and campuses with fewer than five students to protect student confidentiality. In these cases, one or both of two notes appear, " $<5 \mathrm{t}$ " and " $<5 \mathrm{~h}$, , with "t" referring to a small number of students tested and "h" indicating a small number of examinees. This precaution also ensures that single sets of scores cannot be identified or linked with any individual. In Tables B-1 through B-3, districts with five or more examinees but fewer than five scores of 3 or above for AP or 4 or above for IB receive the following note: "<5h." When it is possible for these score data to be arithmetically inferred from other districtor campus-level data, additional masking is employed using intervals of 5 students, and a note such as the following appears: "<10m," "<15m," "<20m," etc.

## Notes on Appendix C

Tables C-1 and C-2 present Advanced Placement (AP) and International Baccalaureate (IB) program statistics disaggregated by category within 25 groupings of district characteristics. Specifically, Table C-1 shows the number and percentage of districts with AP examination participation in school year 2003-04 by each of the 25 groupings of district characteristics. In addition, the table shows the percentage of 11th and 12th graders taking at least one AP examination and the percentages of both examinees and examinations with scores in the $3-5$ range. Table C-2 shows how the 19 districts with IB examination participation are distributed across each of the groupings. For both C-1 and C-2, state summary statistics are provided at the bottom of the final page of each table.

Data about teachers, district expenditures, and students are from the Public Education Information Management System (PEIMS). Tax and property data are provided by the Comptroller's Property Tax Division. Information about college admissions examinations (SAT I and ACT) and the Texas Assessment of Knowledge and Skills (TAKS) is provided by the test contractors. All data are for the 2003-04 school year, with the exception of college admissions and district expenditures, which lag one year. Grouping criteria include student enrollment, district type, percentage of students passing the TAKS, and percentage of teachers with advanced degrees. Although the number of categories within each grouping is consistent from year to year, the range represented by a particular category may change.

## Texas Education Agency <br> District Characteristic Descriptions, 2003-04

## Cost of Education Index

The Cost of Education Index (CEI) reflects geographic variations in costs beyond the control of districts. This category classifies districts into five groups, each with approximately the same number of districts. The CEI has a minimum value of 0.0 and a maximum of 1.2. Most districts have a CEI value of at least 1.0. Districts with a CEI value of 0.0 are primarily charter school districts.

## District Type

Districts are grouped into one of eight subcategories ranging from major urban to rural. Charter school districts are in a separate subcategory. Factors such as enrollment, growth rates, economically disadvantaged status, and proximity to urban areas are used to group districts into the appropriate subcategory. The subcategories are:

## Major Urban

The largest districts in the state that serve the six metropolitan areas of Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso. A district is major urban if it is the largest district in a county with a population of 650,000 or over, and at least 35 percent of students in the district are economically disadvantaged. If a district is not the largest district in the county, it may also be major urban if its enrollment is 75 percent of the largest district, and at least 35 percent of the students are economically disadvantaged.

## Major Suburban

Other districts in and around the major urban areas. A district is major suburban if it is contiguous to a major urban district, and its enrollment is at least 3 percent of the major urban district or at least 4,500 . If a district is not contiguous to a major urban area, it must be within the same county and have an enrollment of 15 percent of the major urban district or have an enrollment of at least 4,500 to be major suburban.

## Other Central City

The major districts in other large Texas cities. If a district is not contiguous to one of the major urban districts but the county population is between 100,000 and 650,000, and it is the largest district in the county or its population is 75 percent of the largest district, then it is other central city.

## Other Central City Suburban

Other districts in and around the other large, but not major, Texas cities. If a district is in a county with a population between 100,000 and 650,000 , and its enrollment is at least 15 percent of the largest district in the county, then it is other central city suburban. A district can also be other central city
suburban if it is contiguous to a central city district, its population is greater than 3 percent of that district, and its enrollment exceeds the state median of 698 students.

## Independent Town

A district is designated as independent town if it is the largest district in a county with a population of 25,000 to 100,000 , or if its enrollment is greater than 75 percent of the largest district.

## Non-Metropolitan: Fast Growing

A district not designated in any of the above subcategories is non-metropolitan: fast growing if it has a 5-year growth rate of at least 20 percent and at least 300 students enrolled.

## Non-Metropolitan: Stable

A district not designated in any of the above subcategories is non-metropolitan: stable if its enrollment exceeds the state median of 698 students.

## Rural

A district not designated in any of the above subcategories is rural. These districts either have a growth rate of less than 20 percent and an enrollment between 300 and the state median of 698 students, or have an enrollment of less than 300 students.

## Charter Schools

The 190 open-enrollment schools granted a charter by the State Board of Education for operation during the 2003-04 school year. Open-enrollment charter schools operate in a facility of a commercial or nonprofit entity or a school district.

## Education Service Center Regions

The state is divided into 20 geographic regions, each served by an Education Service Center (ESC). The ESC region used in this category is the region from which the district receives services, not the geographically assigned ESC region. For the vast majority of districts, these are the same.

## Enrollment

Districts are grouped by size into nine subcategories. Size is determined by the total number of students in membership in the district on a day in late October of each year. It does not include students served by a district but not in membership in the serving district.

## Highest Property Value

Property is grouped into four subcategories based on how it is used. The subcategory with the greatest total property value for a district determines the subcategory in which the district is placed.

The 6 special statutory and 190 charter school districts are in a separate subcategory because they have no taxable property wealth. The four subcategories are:

- Residential — Single-family and multi-family residential, and residential inventory
- Land - Vacant lots and taxable rural real
- Oil and Gas - Oil, gas, and minerals
- Business - Commercial and industrial real, commercial and industrial personal, and utilities

## Operating Cost Per Pupil

Operating costs are the sum of all actual expenditures for a district's operation, for all reported funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per-student amounts equal the prior school year expenditures divided by the current number of students. Districts are grouped into five subcategories, each with approximately the same number of districts.

## Property Wealth: Average, Equal Pupil Groups, and Median

Property wealth is the total taxable property value divided by the total number of students and is used as an indicator of a district's ability to raise local funds on a per pupil basis. The property value used is for the last completed calendar year, i.e., 2003. The taxable value is the traditional measure of value, not the alternative value used in state funding formulas. The total number of students is for the current school year, i.e., 2003-04. The property wealth: average category shows districts above and below state average wealth. The property wealth: equal pupil groups category classifies districts into 20 subcategories, each with approximately the same number of students. The property wealth: median category groups districts into 10 subcategories, each with approximately the same number of districts. In all 3 categories, the 6 special statutory and 190 charter school districts are in a separate subcategory because they have no taxable property wealth.

## Pupil Change: 2002-03 - 2003-04

This category reports the variation in student enrollment over a one-year period. One subcategory designates districts with declining enrollment, while the remaining subcategories designate districts with growth rates ranging from " $0 \%-3 \%$ " to " $10 \%$ and over."

## Pupil Density

Pupil density is the number of students per square mile. Subcategories range from "fewer than 5 students per square mile" to "100 or more students per square mile." The 6 special statutory and 190 charter school districts form a separate subcategory because they do not have mileage information.

## Pupils: Percent African American, Hispanic, and Nonwhite

These categories group districts according to the ethnic composition of their student enrollments. Each category has 6 subcategories ranging from "under 5\%" to " 50 percent and over." Nonwhite is the sum of all nonwhite populations - Native American or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic - expressed as a percent of the total population.

## Pupils: Percent Economically Disadvantaged

This category groups districts by the number of students reported as economically disadvantaged, expressed as a percentage of the total number of students. Districts fall into 6 subcategories ranging from "under 20\%" to " $80 \%$ and over." Districts report students as economically disadvantaged if they meet any of the following conditions:

- eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- from a family with an annual income at or below the federal poverty line;
- eligible for Temporary Assistance to Needy Families (TANF) or other public assistance;
- recipients of a Pell Grant or comparable state program of need-based financial assistance;
- eligible for programs assisted under Title II of the Job Training Partnership Act; or
- eligible for benefits under the Food Stamp Act of 1977.

## SAT I/ACT: Percent Scoring At or Above Criterion

Districts are grouped into five subcategories based on the percentage of examinees in the prior year who scored at or above the criterion score for either the SAT I or ACT. The SAT I Total criterion score is 1110 and the ACT Composite criterion score is 24 . The percentage equals examinees meeting the criterion divided by all examinees. A sixth subcategory designates districts with no test takers.

## SAT I/ACT: Percent Taking

Districts are grouped into three subcategories based on the percentage of non-special education graduates who took the SAT I, ACT, or both in the prior year. A fourth subcategory designates districts with no graduates.

## Small/Sparse Adjustment

Districts are grouped into four small/sparse subcategories, each with approximately the same number of districts. This category shows small/sparse adjustments as a percent of total adjusted basic allotment amounts, a measure of the extent to which state funding is adjusted to compensate for small
and/or sparsely populated districts. A fifth subcategory contains all districts receiving no small/sparse adjustment.

## TAKS: Percent Passing All Tests Taken

The percentage of students in grades 3-11 who passed all TAKS sections taken out of the number of students in those grades taking one or more tests. The percentages include only students enrolled in the district in October of the school year. Districts are grouped into 5 subcategories, ranging from "under $53.9 \%$ " to " $76.1 \%$ and over," with a 6th subcategory for districts that did not administer the test.

## Tax: Local Adopted Rate

This category shows the total locally adopted tax rate. Districts are grouped into four subcategories, each with approximately the same number of districts. The 6 special statutory and 190 charter school districts are in a separate subcategory because they do not levy property taxes.

## Tax: Local Maintenance \& Operations Rates

This category shows the maintenance and operation (M\&O) adopted tax rate. The M\&O levy includes money generated by districts for equalizing wealth. Districts are grouped into four subcategories. The 6 special statutory and 190 charter school districts are in a separate subcategory because they do not levy property taxes.

## Teacher Experience

Each teacher's FTE count is multiplied by years of experience. These figures are summed for all teachers within a district and then divided by the district's total teacher FTE count, resulting in the average years of teacher experience. This category groups districts into four subcategories, each with approximately the same number of districts.

## Teacher Salary

A district's average teacher salary is calculated by dividing the total salary of teachers by the total FTE count of teachers. Salaries reflect regular duties only and do not include pay for supplemental duties. This category groups districts into four subcategories, each with approximately the same number of districts.

## Teachers: Percent Nonwhite

This category groups districts based on the number of teachers of selected ethnicities. This percent is calculated by dividing nonwhite - Native American or Alaskan Native; Asian or Pacific

Islander; African American, not of Hispanic origin; and Hispanic - teacher FTEs by total teacher FTEs. The category has 6 subcategories ranging from "under 5\%" to " $50 \%$ and over."

## Teachers: Percent with Advanced Degrees

The percent of teachers with advanced degrees is calculated by dividing the FTE count of teachers with a master's degree or doctorate by the FTE count for all teachers. This category groups districts into four subcategories, each with approximately the same number of districts.

## Compliance Statement

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.

Document No. GE06 60105 April 2006

[^0]:    Source. College Board, International Baccalaureate Organisation, and Texas Education Agency (TEA).
    Note. Grade level and ethnicity were taken from the TEA Public Education Information Management System, as available, and from Advanced Placement (AP) files, otherwise. Thus, the sums of percentages by ethnic group may not total 100 percent. In both 1994-95 and 2003-04, Native American students represented fewer than five International Baccalaureate examinees, and Native American participation in AP represented less than 1.0 percent of all AP examinees.

[^1]:    Source. College Board, International Baccalaureate Organisation, and Texas Education Agency (TEA).
    Note. Grade level and gender were taken from the TEA Public Education Information Management System, as available, and from Advanced Placement files, otherwise. Thus, the sums of percentages by gender may not total 100 percent.

[^2]:    Source. College Board and Texas Education Agency.
    Note. Final IB results data for 2003-04 were obtained from the College Board in March 2005. Grade level, gender, and ethnicity were taken from the TEA Public Education Information Management System, as available. Thus, the sums of examinees by gender and ethnic group may be slightly less than the total for all examinees.

[^3]:    Source. College Board and Texas Education Agency.
    Note. Final IB results data for 2003-04 were obtained from the College Board in March 2005. Grade level, gender, and ethnicity were taken from the TEA Public Education Information Management System, as available. Thus, the sums of examinees by gender and ethnic group may be slightly less than the total for all examinees.

[^4]:    Source. College Board and Texas Education Agency.
    Note. Final IB results data for 2003-04 were obtained from the College Board in March 2005. Grade level, gender, and ethnicity were taken from the TEA Public Education Information Management System, as available. Thus, the sums of examinees by gender and ethnic group may be slightly less than the total for all examinees.

[^5]:    Source. College Board, International Baccalaureate Organisation (IBO), and Texas Education Agency.
    Note. Students who took either an AP or IB examination or both are counted only once. Combined results include AP results obtained from the College Board in March 2005 and IB results obtained from the IBO in August 2004.
