#### Abstract

This report has been prepared as an update to Enrollment in Texas Public Schools, 2001-02 (Texas Education Agency [TEA], 2003a). It provides information on enrollment in the Texas public school system from the 1994-95 through 2003-04 school years, based on data collected through the Texas Public Education Information Management System (PEIMS). Enrollment data are provided by grade, ethnicity, gender, and economically disadvantaged status, and for special populations and instructional programs. Data also are reported by education service center region and district type.

Keywords. Enrollment, grade, bilingual/English as a second language, career and technology, gifted and talented, limited English proficiency, special education, Title I, education service center, ethnicity, economically disadvantaged status, and gender.

Cover. Statewide Enrollment, Texas Public Schools, 1987-88 Through 2003-04. See pages 4-5 for detail.

## Highlights

- Texas public school enrollment during the 1987-88 school year was $3,224,916$ students. By 2003-04, enrollment had risen to $4,328,028$ students. Over the 17 -year time period, total enrollment increased by $1,103,112$ students, or by 34.2 percent.
- Statewide enrollment increased by 2.1 percent each year, on average.
- Between the 1994-95 and 2003-04 school years, enrollment increased for all ethnic groups except Whites. Enrollment of White students declined by 4.2 percent.
- Hispanic student enrollment experienced the largest numerical increase, rising by 546,495 students (or $40.6 \%$ ) during this time period. In 2003-04, Hispanic students (43.8\%) were the largest enrolled ethnic group in the state, followed by White students (38.7\%). The third largest group was African American students, at 14.2 percent.
- In 1994-95, there were 1,700,709 economically disadvantaged students, 46.3 percent of all students. By 2003-04, the number had risen to $2,281,195$, bringing the proportion of Texas students who were economically disadvantaged to 52.7 percent.
- During both 2002-03 and 2003-04, Grade 9 had the highest enrollment, in part because of higher grade-level retention in Grade 9. In 2003-04, over 375,000 students were enrolled in this grade.
- The number of students identified as limited English proficient (LEP) grew by 45.1 percent between 1994-95 and 2003-04, and the number of students receiving bilingual or English as a second language (ESL) instructional services increased 52.6 percent.
- District types with high population concentrations and high growth rates (major urban, major suburban, other central city, and other central city suburban) accounted for 79.3 percent of total student enrollment in 2003-04, increasing from 71.7 percent in 1994-95.
- In 1994-95, Education Service Center Region 4 (Houston) served the largest student population, accounting for 21.0 percent of total state public school enrollment. In 2003-04, Region 4 continued to have the largest proportion of total enrollment ( $21.9 \%$ ).
- From 1987-88 to 2001-02, enrollment in U.S. public schools increased 18.9 percent. At the same time, Texas public school enrollment increased 27.5 percent-an increase of over three-quarters of a million new students (National Center for Education Statistics [NCES], 2003a).
- In 1994-95, White student enrollment in U.S. public schools was 65.6 percent, and Hispanic student enrollment was 13.0 percent. In the same year in Texas public schools, White student enrollment was 47.1 percent, and Hispanic student enrollment was 36.1 percent (NCES, 1996). By Fall 2000, White enrollment in U.S. public schools had decreased to 61.2 percent, and Hispanic enrollment had increased to 16.3 percent. In the same period, White enrollment in Texas public schools declined to 42.0 percent, while Hispanic enrollment rose to 40.6 percent (NCES, 2003a).

## Enrollment in Texas

Enrollment is typically defined as the number of students registered in a school at a designated time in the school year. In this report, enrollment refers specifically to the number of students enrolled in Early Education through Grade 12 in the Texas public school system as of the last Friday in October of each year. This annual student count is called the Public Education Information Management System (PEIMS) "snapshot date." Enrollment counts are available for all campuses, school districts, charter schools, counties, Education Service Center (ESC) regions, and the state.

Enrollment data in Texas include student demographic information, such as ethnicity, gender, and economically disadvantaged status, and information on student participation in special programs. Data on student characteristics and program participation are essential for monitoring educational progress and planning educational programs at all levels of the education system.

Financial planners and civic leaders use enrollment data to monitor the educational needs of a community. For example, a growing community will consider current enrollment data when making decisions to add teachers or adjust school programs in the short term. For long-term planning purposes, districts use enrollment trend data to predict and respond to changing needs in such areas as school facilities.

Public school enrollment data are used at the regional and state levels in Texas for education policy planning, administration, and research. Because enrollment trends reflect changes in society as a whole, the Texas Education Agency (TEA), state legislature, and research organizations use enrollment data to better prepare for the future educational needs of the entire Texas population. Enrollment data allow the computation of many vital statistics about the Texas public education system, such as student/teacher ratios and the percentages of students passing the TAKS (Texas Assessment of Knowledge and Skills) test.

Since 1994, accountability ratings for Texas public schools and districts have been based on a set of legislatively-mandated indicators that draw from enrollment data collected by the TEA. Texas law provides that "Performance on the indicators adopted...must be based on information that is disaggregated by race, ethnicity, gender and socioeconomic status...." (Texas Education Code [TEC], §39.051, 2004). As a result, performance is reported by total student population and by student group categories, such as ethnicity and economically disadvantaged status.

Data on annual School Report Cards, which are provided to students' families, also must be reported by student group (TEC, $\S 39.052$, 2004). In addition, the Comprehensive Annual Report on Texas Public Schools must provide to the legislature "a summary compilation of overall student performance on academic skills assessment instruments...disaggregated by race, ethnicity, gender, and socioeconomic status" (TEC, §39.182, 2004).

Enrollment data also are required by federal education legislation. For example, the No Child Left Behind (NCLB) Act of 2001 (2002) obliges states to submit data for all students by the following categories: "economically disadvantaged students; students from major racial and ethnic groups; students with disabilities; and students with limited English proficiency" (pp. 1446-1447). Likewise, NCLB requires state report cards to be submitted annually with "information, in the aggregate, on student achievement...disaggregated by race, ethnicity, gender, disability status, migrant status, English proficiency, and status as economically disadvantaged" (p. 1457).

In 2003-04, a broad range of information was collected through PEIMS on over 1,200 school districts and open-enrollment charters; over 8,000 schools; over 290,000 teachers; and over four million students. Texas public school students are served in markedly diverse school settings. District areas range from about five square miles to nearly five thousand square miles. In 2003-04, only 10 students attended school in the Divide Independent School District. In contrast, over 210,000 students received instruction at 300 school sites in the Houston Independent School District.

Data for state-administered school districts are not included in this report. State-administered districts are created by legislative act and funded and administered by state government agencies, such as the Texas Youth Commission and the Texas Department of Mental Health and Mental Retardation.

This report is the latest in a series of reports on enrollment trends in Texas public schools (TEA, 1998, 2001, 2003a) and continues to provide an overview of Texas enrollment trends, including diversity of the student population by grade, district type, and education service center region (Table 1). Historical data on Texas public school enrollment are included with discussion of changes over time.

## Statewide Enrollment

For the 12-year period from 2001-2013, the National Center for Education Statistics (NCES) projects a 4-percent increase nationally in public primary and secondary school enrollment. "The projected changes in enrollment reflect factors such as internal migration, legal and illegal immigration, the relatively high level of births in the 1990s, and resultant changes in the population, rather than changes in attendance rates" (NCES, 2003c, p. 1). Different regions of the U.S. will experience different rates of growth (NCES, 2003c). Among the states, Texas is expected to experience the 10th largest increase in public school enrollment, at 11.2 percent. The increase in Texas is attributable to a higher than average birthrate and population migration to southern and western states (NCES, 2003c; Sutton \& Mathews, 2004).

Between 1987-88 and 2003-04, the public schools served an increasingly diverse population of students. The rapid growth of the Hispanic population, in particular, brought greater linguistic and cultural diversity to the state. In 2001, the Texas State Data Center and Office of the State Demographer (TSDC/OSD) predicted Hispanics would become the largest ethnic group in the state by the year 2020 (TSDC/OSD, 2001). Hispanic student enrollment surpassed White enrollment in the public schools in 2001-02.

Increasing numbers and percentages of students met the state criteria of economic disadvantage. Under Texas Education Agency (TEA) guidelines, students were identified as economically disadvantaged if their parents or guardians documented their eligibility for free or reduced-price meals under the National School Lunch and Child Nutrition Program or if their families had other economic disadvantages, such as annual incomes at or below the federal poverty guidelines, eligibility for public assistance, and eligibility for food stamps (TEA, 2003b).

- Statewide enrollment during the 1987-88 school year was 3,224,916 students. By 2003-04, enrollment had risen to $4,328,028$ students (Table 2).
- During the 17-year period between 1987-88 and 2003-04, total enrollment increased by 1,103,112 students, or by 34.2 percent (Table 3).
- Each year, on average, statewide enrollment increased by 2.1 percent.

Table 2
Statewide Enrollment, Texas Public Schools, 1987-88 Through 2003-04

| Year | Number |  | Year |
| :--- | ---: | :--- | ---: |

## Enrollment <br> by Ethnicity

- Between the 1994-95 and 2003-04 school years, enrollment increased for all ethnic groups except Whites. Enrollment for White students declined by 4.2 percent (Table 4).
- Enrollment of Native American students had the largest percentage increase, rising 52.5 percent during the 10 -year time period. Asian/Pacific Islander enrollment increased by 49.6 percent.
- Hispanic enrollment had the largest numerical increase, rising by 546,495 students (or $40.6 \%$ ) over the decade (Figure 1). In 2003-04, Hispanic students (43.8\%) were the largest enrolled ethnic group in the state, followed by White students (38.7\%).
- African American enrollment decreased slightly from 14.4 percent of total enrollment to 14.2 percent during this time.

## Enrollment

by Economically Disadvantaged Status

- During the 1994-95 school year, there were 1,700,709 economically disadvantaged students46.3 percent of all students. By 2003-04, the number of economically disadvantaged students had risen to $2,281,195$, or 52.7 percent of all students (Figure 2).
- During the 10-year period between 1994-95 and 2003-04, the number of economically disadvantaged students rose by 580,486 (Table 5 ). The 34.1 percent increase exceeded the 16.0 percent increase in the public school population as a whole.
- Between 1994-95 and 2003-04, students eligible for reduced-price meals increased from 5.8 percent to 7.4 percent of all students, and students eligible for free meals decreased slightly from 39.4 percent to 39.3 percent. Students identified as economically disadvantaged for reasons other than eligibility for free or reduced-priced meal increased from 1.1 percent to 6.0 percent.

## Enrollment by Grade

Children in Texas are required to attend school beginning at age six (Texas Education Code §25.085, 2004). All children who are five years old on or before September 1 are eligible, but not required, to attend kindergarten. With few exceptions, children must attend school until they reach the age of 18 .

Student learning during the early education and prekindergarten years is linked to future academic accomplishments, particularly for children identified as limited English proficient, disabled, and/or economically disadvantaged. In early education and prekindergarten programs, children develop skills necessary for success in the regular public school curriculum in the areas of language, mathematics, and social skills. Early education in Texas is a diverse set of programs designed for children who meet certain eligibility criteria. For example, Early Childhood Intervention is a coordinated system of services for children, birth to age three, with disabilities or developmental delays; and Even Start is a family literacy program for children from birth through age seven and a parent or guardian who will benefit from literacy education. Prekindergarten is available for children who are unable to speak and comprehend the English language, are educationally disadvantaged, or are homeless (Texas Education Agency [TEA], 2002).

Enrollment trends in the elementary grades are affected by a variety of factors, including funding for early childhood and kindergarten programs, migration into the state, and grade-level retention rates in the primary grades. Enrollment trends in the secondary school grades are also affected by grade-level retention rates, as well as early graduation, transfer into General Educational Development (GED) programs, and dropout rates. Decisions on private and home schooling affect all grade levels.

The change in Texas public school student enrollment between school years 2002-03 and 2003-04 was marked by an increase in the number of students in all grades, with total enrollment increasing 1.7 percent (Table 7). Enrollment as a percentage of the total student population increased for Grades 1, 8, and 10 and decreased for Grades $3,4,5$, and 9 . Enrollment in early education and prekindergarten increased by 5.1 and 5.8 percent, respectively, while enrollment in Grades K-12 increased only 1.5 percent.

- During both the 2002-03 and 2003-04 school years, Grade 9 had the highest enrollment (Figure 3), in part because of high grade-level retention in Grade 9 compared to other grades (TEA, 2004). In 2003-04, over 375,000 students were enrolled in this grade.
- In 2003-04, grade-level enrollment ranged from a low of 5.6 percent (Grade 12) to a high of 8.7 percent (Grade 9) of total enrollment in Grades K-12 (Table 7). The remaining grades ranged from 6.2 percent (Grade 11) to 7.8 percent (Grade 1) of total enrollment.
- In 2003-04, enrollment in early education accounted for 0.6 percent (27,571 students) of total enrollment, and prekindergarten accounted for 3.8 percent ( 166,579 students).

## Enrollment

## by Grade and Ethnicity

- By grade level, the proportion of enrollment accounted for by White students generally increased from kindergarten to Grade 12, whereas the proportion accounted for by Hispanic students generally decreased (Figure 4 and Table 8). This is, in part, a reflection of the overall Hispanic and White population trends in Texas: increasingly, there are more young, school-age Hispanic children than White children.
- The proportions of grade-level enrollment accounted for by African American, Asian/Pacific Islander, and Native American students were relatively stable across Grades 1-12 in 2003-04. During the school year, there were greater variations in enrollment by grade for Hispanic and White students.
- Consistent with the growth of the Texas Hispanic student population overall and the requirements of targeted early education programs, Hispanic enrollment increased most notably in these programs. Hispanics made up 41.9 percent of the early education enrollment during the 2002-03 school year, increasing to 44.9 percent during 2003-04. In contrast, the White proportion of early education enrollment decreased between these two school years, from 44.5 percent to 41.3 percent.
- In Grades 10, 11 and 12, Asian/Pacific Islander and White students increased as a proportion of the student body and African American and Hispanic students decreased.

## Enrollment

## by Grade and Economically Disadvantaged Status

- The overall percentage of students designated as economically disadvantaged increased from 51.8 percent to 52.7 percent, between the 2002-03 and 2003-04 school years (Table 9).
- Across grade levels, the percentage of students who are economically disadvantaged decreased between Grade 1 and Grade 12. In 2003-04, 59.4 percent of students in Grade 1 were economically disadvantaged, compared to 33.1 percent of students in Grade 12 (Figure 5).
- The largest percentage of economically disadvantaged students, by far, was found in prekindergarten, a program designed to serve the educational needs of low-income children and/or children learning to speak English.

| All grades | $2,203,961$ | 51.8 | $2,281,195$ | 52.7 |

## Enrollment for Instructional Programs and Special Populations

Students participate in instructional programs designed to meet their educational needs. For example, students identified as limited English proficient (LEP) do not speak English as their primary language and have a limited ability to read, speak, write, or understand English. Students identified as LEP may participate in bilingual or English as a second language (ESL) programs. Students in Grades 6-12 can participate in career and technology courses that prepare them for the dual roles of family member and wage earner, and help them gain employment in high-skilled, high-wage jobs and/or advance to postsecondary education. Gifted and talented programs offer eligible students a continuum of learning experiences that leads to advanced accomplishments. Special education offers instructional and related services for eligible students with cognitive, physical, and/or emotional disabilities. Title I is the largest federal aid program for elementary and secondary schools. The goal of Title I is to improve teaching and learning for at-risk students attending schools with high percentages of economically disadvantaged students. Students counted as Title I students may be participating in Title I-funded programs, or they may be enrolled in campuses that receive school-wide Title I assistance.

Enrollment for instructional programs and special populations in Texas public schools varied greatly between school years 1994-95 and 2003-04; enrollment remained stable in some areas and expanded greatly in others. During this 10 -year time period, there were particularly large gains in the proportion of students participating in career and technology programs and the Title I program (Figure 6). By 2003-04, the number of students participating in career and technology education was 435,403, and Title I served almost 2.5 million students-over 55 percent of public school enrollment (Table 10).

- Between school years 1994-95 and 2003-04, career and technology programs in the public schools experienced particularly large gains in enrollment. The number of students taking a sequence of career and technology courses rose 240.8 percent over the 10 -year period (Table 10).
- The number of students participating in Title I programs also increased greatly, rising by 203.5 percent between 1994-95 and 2003-04.
- The percentage of students served in special education programs remained relatively constant over the 10 years, with a low of 11.2 percent served in 1994-95 and a high of 12.2 percent served in the 1998-99 and 1999-00 school years.
- Participation in gifted and talented programs ranged from 7.5 percent to 8.4 percent during this 10 -year time period.
- The number of students identified as LEP grew by 45.1 percent between 1994-95 and 2003-04, and the number of students receiving bilingual or ESL instructional services increased 52.6 percent.

Figure 6

## Enrollment in Instructional Programs, Texas Public Schools, 1994-95 Through 2003-04

Note. Students may be counted in more than one category. ESL=English as a second language. Career and technology courses enroll Grades 6-12 only. Title I was Chapter 1 prior to 1995-96.

## Enrollment for Instructional Programs and Special Populations by Ethnicity

- Between school years 2002-03 and 2003-04, there were no significant changes in the distribution of students by ethnicity for instructional programs and special populations (Table 11). Trend analysis of program participation shows cases of under- and overrepresentation of ethnic groups in certain areas, compared to their percentages of the total student population.
- In 2003-04, African American students accounted for 14.2 percent of the total student population. In contrast, African Americans made up 17.7 percent of the special education population and 8.6 percent of students enrolled in gifted and talented programs (Figure 7).
- The percentage of Asian/Pacific Islanders in special education programs in 2003-04 (1.1\%) was lower than expected and their percentage of the gifted and talented program enrollment (5.9\%) was higher than expected, given their proportion of the total student population (2.9\%).
- In 2003-04, Hispanic students were 43.8 percent of the total public school population. The percentage of students participating in gifted and talented programs who were Hispanic was 30.1 percent, while Hispanic representation in Title I was 59.2 percent.
- Given their percentage of the total student population (38.7\%), the representation of White students in gifted and talented programs ( $55.1 \%$ ) was higher than expected, and their proportion of Title I program enrollment (23.6\%) was lower than expected.

## Enrollment

for Instructional Programs and Special Populations by Economically Disadvantaged Status

- The proportions of program participants and special populations who were economically disadvantaged varied little between the 2002-03 and 2003-04 school years (Table 12).
- Economically disadvantaged students made up 52.7 percent of all students in 2003-04 and 59.2 percent of special education students (Figure 8).
- The percentages of students who were economically disadvantaged varied considerably across other instructional programs. Gifted and talented programs had the lowest percentage of economically disadvantaged students ( $30.0 \%$ ), followed by career and technology courses ( $43.0 \%$ ).
- In bilingual and ESL programs, 88.0 percent of students were economically disadvantaged, which closely matched the percentage of LEP students identified as economically disadvantaged (87.2\%).

## Enrollment <br> for Instructional Programs and Special Populations by Gender

- There were no major changes in enrollment by gender for instructional programs or special populations between the 2002-03 and 2003-04 school years (Table 13).
- Special education programs showed the greatest disparity between female and male participation (Figure 9). In 2003-04, the percentage of females in the special education population (33.2\%) was lower than their percentage in the total student population ( $48.6 \%$ ). Conversely, the percentage of special education students who were male $(66.8 \%)$ was higher than the percentage of males in the total population (51.4\%).
- Females were somewhat overrepresented in gifted and talented programs ( $51.9 \%$ ), while males were underrepresented (48.1\%).

## Enrollment by District Type

Texas school districts are classified into nine types based on community features: major urban; major suburban; other central city; other central city suburban; independent town; non-metropolitan: fast growing; non-metropolitan: stable; rural; and charter school district. District types are based on overall size, rate of growth, student economic status, and proximity to urban areas, with open-enrollment charter school districts forming a separate category (see Appendix A on page 46). Large, urban school districts serve the six metropolitan areas of Austin, Dallas, El Paso, Fort Worth, Houston, and San Antonio. At the other extreme, more than 400 districts serve students in rural areas.

Analyses in this section are based on 10 years of district type data. As with the overall Texas population during this time period, there were changes in student population in certain geographic areas of the state. There was a gradual population shift away from the rural, less densely populated areas of the state, to more concentrated, urban and suburban population centers. Most remarkable was the 51.8 percent enrollment growth in the other central city suburban district category, that is, school districts in and around the other large, but not major, Texas cities. This increase was over three times the 16.0 percent increase in total public school enrollment in the state (Figure 10).

- Between 1994-95 and 2003-04, three district types experienced particularly high gains in student population. Enrollment in other central city suburban districts increased 51.8 percent, other central city district enrollment grew 38.5 percent, and the student population in major suburban districts increased 27.0 percent (Table 14). Districts in non-metropolitan fast-growing towns, independent towns, and rural areas reported the highest losses over the last 10 years, declining in enrollment by 54.1 percent, 19.7 percent, and 19.5 percent, respectively.
- Texas school districts with high population concentrations and high growth rates (major urban, major suburban, other central city, and other central city suburban) accounted for 79.3 percent of total student enrollment in school year 2003-04, increasing from 71.7 percent in 1994-95 (Figure 10). Most charters, serving 1.4 percent of Texas public school students, are in urban areas. This growth contrasts with the enrollment decrease experienced by districts with low population concentrations (independent town, non-metropolitan: fast growing, non-metropolitan: stable, and rural). Districts with low population densities accounted for 28.3 percent of total enrollment in 1994-95 and decreased in enrollment by 9.0 percentage points to 19.3 percent in 2003-04.
- Public school students being served in rural areas decreased from 4.5 percent to 3.1 percent over the last 10 years. Districts in rural areas account for one-third (34\%) of Texas public school districts.

## Enrollment

by District Type and Ethnicity

- Within major urban districts, the only student population decrease between the 1994-95 and 2003-04 school years occurred among African American students (8.5\%) (Figure 11).
- Over the last 10 years, major suburban districts reported considerable increases in the numbers of African American (52.0\%), Asian/Pacific Islander (58.3\%) and Hispanic (75.4\%) students.
- In central city districts that are not in the large metropolitan areas, the number of Hispanic students increased by 66.2 percent (Table 15).
- Rural districts experienced large reductions across all ethnic groups except Native American, with the percentages of African American and White students decreasing the most over the 10 years ( $31.6 \%$ and $24.4 \%$, respectively).

## Enrollment

## by District Type and Economically Disadvantaged Status

- The number of economically disadvantaged students in major urban districts increased from 61.8 percent of the total student population in 1994-95 to 68.7 percent in 2003-04 (Table 16).
- Major suburban districts reported the greatest gain in number and percentage of economically disadvantaged students, increasing from 32.1 percent of total student enrollment during 1994-95 to 39.7 percent in 2003-04 (Figure 12). This increase of 59.6 percent was nearly equaled by the 59.3 percent increase experienced by other central city suburban districts.
- Non-metropolitan: fast growing districts reported the largest overall percent decline (52.2\%) in economically disadvantaged students during the 10 -year period.
- Rural districts, districts in independent towns, and districts serving non-metropolitan stable areas also reported overall declines in the number of economically disadvantaged students $(9.3 \%, 5.1 \%$, and $3.3 \%$ respectively). Nevertheless, the percentage of economically disadvantaged students in these districts increased to over 50 percent beginning in the 2001-02 school year.

${ }^{2}$ Data not available. Charter schools started in the 1996-97 school year. As a result, a ten-year change is not computed for charter schools.

## Enrollment by Education Service Center

Regional Education Service Centers (ESCs) are non-regulatory, public institutions created and authorized by the Texas Legislature, and their association with school districts is collaborative and supportive. Texas is divided into 20 service center regions, and each region has its own ESC. Some of the primary goals of ESCs are to work with the Texas Education Agency and districts to improve student achievement, help districts become more cost effective and efficient, and assist in the implementation of new laws and regulations passed by the Texas Legislature and State Board of Education.

Eleven ESC regions experienced gains in student enrollment between the 1994-95 and 2003-04 school years, while the other nine saw declines (Figure 13). Four of the six regions experiencing increases of 20 percent or more each include a major urban district (Austin, Dallas, Forth Worth, and Houston Independent School Districts). The fifth high-growth region is ESC Region 1 (Edinburg), which includes a number of immigrant communities along the southern border with Mexico. Region 6 (Huntsville), which includes some of the rapidly expanding districts north of Houston, is the sixth high-growth region.

- During the 1994-95 school year, ESC Region 4 (Houston) served the largest student population: 21.0 percent of the total state public school enrollment. In 2003-04, Region 4 continued to serve the largest proportion of total state enrollment (21.9\%) (Table 17).
- In1994-95, Region 9 (Wichita Falls) served the smallest population: 1.1 percent of the total state public school enrollment. Region 9 remained the smallest in 2003-04, with 0.9 percent of total state enrollment.
- Region 13 (Austin) experienced the greatest gain between 1994-95 and 2003-04, increasing in student population by 32.2 percent. Region 14 (Abilene) had the greatest loss, decreasing by 11.8 percent during this time period.

## Enrollment <br> by Education Service Center and Ethnicity

- Comparing all ESC regions from 1994-95 to 2003-04, African American enrollment increased most in Region 1 (Edinburg) and Region 11 (Fort Worth), by 62.6 percent and 37.1 percent, respectively (Figure 14).
- Hispanic enrollment rose in all 20 ESC regions during the period (Table 18). The number of Hispanic students more than doubled in Regions 7 (Kilgore), 8 (Mt. Pleasant), and 11 (Fort Worth).
- White student enrollment increased in only 3 of the 20 ESC regions during the decade (Regions 6, 11, and 13). Region 13 (Austin) experienced the greatest gain in White enrollment (14.1\%), and Region 19 (El Paso) had the greatest decline (37.4\%).

## Enrollment

by Education Service Center and Economically Disadvantaged Status

- During the 1994-95 school year, six ESC regions (Regions 1, 2, 17, 18, 19, 20) served student populations of over 50 percent economically disadvantaged. Region 1 (Edinburg) had the highest percentage of economically disadvantaged students (76.1\%) and Region 11 (Fort Worth) had the lowest (32.0\%) (Table 19).
- By 2003-04, fourteen regions had economically disadvantaged populations of over 50 percent. In that school year, Region 1 (Edinburg) again had the highest percentage (84.4\%), and Region 11 (Fort Worth) again had the lowest (37.2\%).
- Three regions showed increases of economically disadvantaged students far greater than their increase in total student population. Region 4 (Houston) showed a 60.6 percent increase in economically disadvantaged students (Figure 15), nearly triple its increase in total enrollment (21.0\%). Regions 11 (Fort Worth) and 7 (Kilgore) also showed large relative increases-53.8 percent and 27.6 percent, respectively.

## National Enrollment Trends

From 1988 to 2002, the estimated statewide population of Texas increased from 16,667,022 to 21,215,494 (U.S. Bureau of the Census, 1995a, 2003). During the same time period, the estimated school age population in Texas increased from 3,429,000 (ages 5-17) to 4,951,302 (ages 5-19). National enrollment increased 18.9 percent between 1987-88 and 2001-02, while Texas enrollment increased 27.5 percent. During this time period, the U.S. public school system added 7,567,649 students, and Texas public schools added 891,642 students.

In fall of 2000, the U.S. public school population was 17.2 percent African American, 4.1 percent Asian/Pacific Islander, 16.3 percent Hispanic, 1.2 percent Native American, and 61.2 percent White (NCES, 2003a). By comparison, Texas public school enrollment was 14.4 percent African American, 2.7 percent Asian/Pacific Islander, 40.6 percent Hispanic, 0.3 percent Native American, and 42.0 percent White. Between 1994-95 and 2000-01, the proportion of public school enrollment accounted for by Hispanic students showed the largest increase among ethnic groups, both nationally and in Texas, while the proportion accounted for by White students decreased. Throughout the period, Texas had a much higher percentage of Hispanic students and a lower percentage of White students than the nation as a whole (NCES, 1996; NCES, 2003a).

The National School Lunch and Child Nutrition Program, which provides free- and reduced-price lunches to students from low-income families, is used as an indicator of student socioeconomic status. During federal fiscal year (FFY) 1995, an estimated 31.8 percent of students nationally participated in this program (U. S. Department of Agriculture [USDA], 2002). By FFY 2002, this figure had risen to 58.9 percent (NCES, 2003a; USDA, 2004). In Texas, where an estimated 38.2 percent of students participated in FFY 1995, participation had risen to 62.6 percent in FFY 2002.

A higher percentage of public school students participated in special education programs across the United States ( $12.2 \%$ ) in 1994-95 than in Texas (11.4\%) (NCES, 1997). In the 2000-01 school year, the percentages increased slightly in both cases, although the national figure remained higher: 13.3 percent of students in the U.S. participated in special education programs in 2000-01, while 12.1 percent of Texas students did so (NCES, 2003a).

Students identified as limited English proficient (LEP) are eligible to participate in bilingual or English as a second language (ESL) programs. In 1994-95, the percentage of public school students identified as LEP was lower nationally than in Texas. Seven percent of students nationally were identified as LEP, compared to 12.6 percent of Texas students (Macías \& Kelly, 1996). Although students identified as LEP increased both nationally (to 7.9\%) and in Texas (to 14.5\%) between the 1994-95 and 2001-02 school years, the percentage of LEP students in Texas remained higher (NCES, 2003b).

In states with public gifted and talented programs in the 1993-94 school year, the percentage of students identified as eligible to participate ranged from a low of 1.0 percent to a high of 15.0 percent (NCES, 2003a). In Texas, the percentage of students identified as gifted and talented that year was 7.0 percent of total enrollment. During the 1998-99 school year, the range of students identified as gifted and talented nationally had shifted to a low of 0.2 percent and a high of 22.9 percent (Council of State Directors of Programs for the Gifted, 1999). In Texas, 8.0 percent of students were identified as gifted and talented in 1998-99.

## Appendix A. District Type Definitions

Districts are grouped by size into nine subcategories based on their number of students in membership. This is the total number of students in membership in the district on a day in late October of each year. It does not include students who are served by the district but are not in membership in the serving district. Districts are classified on a scale ranging from major urban to rural. Factors such as size, growth rates, student economic status, and proximity to urban areas are used to determine the appropriate group. The charter school districts are in a separate subcategory. The groups are:

Major Urban. The largest school districts in the state that serve the six metropolitan areas of Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso. A district is designated major urban if it is the largest in counties with populations of 650,000 or over, and there is greater than $35 \%$ low-income students in the school district. Or, if not the largest district in the county, the number of students in membership is $75 \%$ of the largest district and there are more than $35 \%$ low-income students in the district.

Major Suburban. Other school districts in and around the major urban areas. A district is major suburban if it is contiguous to a major urban district and the number of students in membership is at least $3 \%$ of the major urban district or an enrollment of at least 4,500. If a district is not contiguous to a major urban area, then it must be within the same county and have an enrollment of $15 \%$ of the major urban district or an enrollment of at least 4,500 in order to be classified as major suburban.

Other Central City. The major school districts in other large Texas cities. If the district is not contiguous to one of the major urban districts but the county population is between 100,000 and 650,000 and it is the largest district in the county or its population is $75 \%$ of the largest district then the district is designated as other central city.

Other Central City Suburban. Other school districts in and around the other large, but not major, Texas cities. If the district is in a county between 100,000 and 650,000 population and the number of students in membership is at least $15 \%$ of the largest district in the county then it is designated central city suburban. If a district is contiguous to a central city district, its population is greater than $3 \%$ of that district's, and the number of students in membership is greater than the corresponding median figure for the state, it is also central city suburban.

Independent Town. If the district is the largest in a county having a population of 25,000 to 100,000 , or the number of students in membership is greater than $75 \%$ of the largest district, the district is considered an independent town.

Non-Metro: Fast Growing. The school districts that fail to be in any of the above subcategories and that exhibit a five-year growth rate of at least 20 percent. These districts must have at least 300 students in membership.

Non-Metro: Stable. The school districts that fail to be in any of the above subcategories, yet the number of students in membership exceed the state median of 698 students.

Rural. The school districts that fail all of the above tests for placement into a subcategory. These districts either have a growth rate less than 20 percent and the number of students in membership is between 300 and the state median of 698 , or the number of students in membership is less than 300 .

Charter Schools. The open-enrollment schools granted a charter by the State Board of Education for operation. Open-enrollment charter schools operate in a facility of a commercial or nonprofit entity or a school district.

# Compliance Statement 

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
