Citation. Texas Education Agency. (2007). Enrollment in Texas public schools, 2005-06. (Document No. GE07 601 05). Austin TX: Author.

Abstract. This report has been prepared as an update to Enrollment in Texas Public Schools, 2003-04 (Texas Education Agency [TEA], 2005a). It provides information on enrollment in the Texas public school system from the 1995-96 through 2005-06 school years, based on data collected through the Texas Public Education Information Management System (PEIMS). Enrollment data are provided by grade, ethnicity, gender, and economically disadvantaged status, and for special populations and instructional programs. Data also are reported by education service center region and district type.

Keywords. Enrollment, grade, bilingual/English as a second language, career and technology, gifted and talented, limited English proficiency, special education, Title I, district type, education service center, ethnicity, economically disadvantaged status, and gender.

Cover. Statewide Enrollment, Texas Public Schools, 1987-88 Through 2005-06. See pages 4-5 for detail.

## Highlights

- Texas public school enrollment during the 1995-96 school year was 3,799,032 students. By 2005-06, enrollment had risen to $4,521,043$ students. Over the 10 -year time period, total enrollment increased by 722,011 students, or by 19.0 percent.
- Statewide enrollment increased by 1.9 percent each year, on average.
- Between the 1995-96 and 2005-06 school years, enrollment increased for all ethnic groups except Whites. Enrollment of White students declined by 6.0 percent.
- Hispanic student enrollment experienced the largest numerical increase, rising by 650,199 students (or $46.5 \%$ ) over the decade. In 2005-06, Hispanic students (45.3\%) were the largest enrolled ethnic group in the state, followed by White students ( $36.5 \%$ ). The third largest group was African American students, at 14.7 percent.
- In 1995-96, there were 1,754,401 economically disadvantaged students, 46.8 percent of all students. By 2005-06, the number had risen to $2,506,972$, bringing the proportion of Texas students who were economically disadvantaged to 55.5 percent. During this 10 -year time period, the increase in the number of economically disadvantaged students $(752,571)$ exceeded the increase in the number of total students $(722,011)$.
- During both 2004-05 and 2005-06, Grade 9 had the highest enrollment, in part because of higher grade-level retention in Grade 9. In 2005-06, over 392,000 students were enrolled in this grade.
- The number of students identified as limited English proficient (LEP) grew by 48.3 percent between 1995-96 and 2005-06, and the number of students receiving bilingual or English as a second language (ESL) instructional services increased by 55.6 percent.
- District types with high population concentrations and high growth rates (major urban, major suburban, other central city, and other central city suburban) accounted for 80.6 percent of total student enrollment in 2005-06, increasing from 73.2 percent in 1995-96.
- In 1995-96, Education Service Center Region 4 (Houston) served the largest student population, accounting for 21.0 percent of total state public school enrollment. In 2005-06, Region 4 continued to have the largest proportion of total enrollment (22.2\%).
- From fall 1993 to fall 2003, enrollment in U.S. public schools increased 11.7 percent, according to national figures. At the same time, Texas public school enrollment increased 20.1 percent-an increase of almost three-quarters of a million new students (National Center for Education Statistics [NCES], 2006a).
- In fall 1993, White student enrollment in U.S. public schools was 66.1 percent, and Hispanic student enrollment was 12.7 percent. In the same year in Texas public schools, White student enrollment was 47.7 percent, and Hispanic student enrollment was 35.5 percent. By fall 2003, White enrollment in U.S. public schools had decreased to 58.7 percent, and Hispanic enrollment had increased to 18.5 percent. In the same period, White enrollment in Texas public schools declined to 38.7 percent, while Hispanic enrollment rose to 43.8 percent (NCES, 2006a).

## Enrollment in Texas

Enrollment is typically defined as the number of students registered in a school at a designated time in the school year. In this report, enrollment refers specifically to the number of students enrolled in Early Education through Grade 12 in the Texas public school system as of the last Friday in October of each year. This annual student count is called the Public Education Information Management System (PEIMS) "snapshot date." Enrollment counts are available for all campuses, school districts, charter schools, counties, education service center regions, and the state.

Enrollment data in Texas include student demographic information, such as ethnicity, gender, and economically disadvantaged status, and information on student participation in special programs. Data on student characteristics and program participation are essential for monitoring educational progress and planning educational programs at all levels of the education system.

Financial planners and civic leaders use enrollment data to monitor the educational needs of a community. For example, a growing community will consider current enrollment data when making decisions to add teachers or adjust school programs in the short term. For long-term planning purposes, districts use enrollment trend data to predict and respond to changing needs in such areas as school facilities.

Public school enrollment data are used at the regional and state levels in Texas for education policy planning, administration, and research. Because enrollment trends reflect changes in society as a whole, the Texas Education Agency (TEA), state legislature, and research organizations use enrollment data to better prepare for the future educational needs of the entire Texas population. Enrollment data allow the computation of many vital statistics about the Texas public education system, such as student/teacher ratios and the percentages of students passing the Texas Assessment of Knowledge and Skills (TAKS) test.

Since 1994, accountability ratings for Texas public schools and districts have been based on a set of legislatively-mandated indicators that draw from enrollment data collected by the TEA. Texas law provides that "Performance on the indicators adopted...must be based on information that is disaggregated by race, ethnicity, gender and socioeconomic status...." (Texas Education Code [TEC], §39.051, 2006). As a result, performance is reported by total student population and by student group categories, such as ethnicity and economically disadvantaged status.

Data on annual School Report Cards, which are provided to students' families, also must be reported by student group (TEC, $\S 39.052$, 2006). In addition, the Comprehensive Annual Report on Texas Public Schools must provide to the legislature "a summary compilation of overall student performance on academic skills assessment instruments...disaggregated by race, ethnicity, gender, and socioeconomic status" (TEC, §39.182, 2006).

Enrollment data also are required by federal education legislation. For example, the No Child Left Behind (NCLB) Act of 2001 (2002) obliges states to submit data for all students by the following categories: "economically disadvantaged students; students from major racial and ethnic groups; students with disabilities; and students with limited English proficiency" (pp. 1446-1447). Likewise, NCLB requires state report cards to be submitted annually with "information, in the aggregate, on student achievement...disaggregated by race, ethnicity, gender, disability status, migrant status, English proficiency, and status as economically disadvantaged" (p. 1457).

In 2005-06, a broad range of information was collected through PEIMS on over 1,200 school districts and open-enrollment charters; over 8,100 schools; over 300,000 teachers; and over four and a half million students. Texas public school students are served in markedly diverse school settings. District areas range from about four square miles to nearly five thousand square miles. In 2005-06, fewer than 20 students attended school in the San Vicente Independent School District. In contrast, over 210,000 students received instruction at more than 300 school sites in the Houston Independent School District.

Data for state-administered school districts are not included in this report. State-administered districts are created by legislative act and funded and administered by state government agencies, such as the Texas Youth Commission and the Texas Department of Aging and Disability Services.

This report is the latest in a series of reports on enrollment trends in Texas public schools (TEA, 1998, 2001, 2003, 2005a) and continues to provide an overview of Texas enrollment trends, including diversity of the student population by grade, district type, and education service center region (Table 1). Historical data on Texas public school enrollment are included with discussion of changes over time.

## Statewide Enrollment

Public school enrollment has increased in recent years, particularly in the southern and western United States, and more growth is expected in the future. For the 12-year period from 2002 to 2014, the National Center for Education Statistics (NCES) projects a 4-percent increase nationally in public primary and secondary school enrollment. "The projected changes in enrollment reflect factors such as internal migration, legal and illegal immigration, the relatively high level of births in the 1990s, and resultant changes in the population, rather than changes in attendance rates" (NCES, 2005, p. 5). Among the states, Texas is expected to experience the second largest increase (after Nevada) in public school enrollment, at 15.6 percent (NCES, 2005). The increase in Texas is attributable to a higher than average birthrate and population migration to southern and western states (Sutton \& Mathews, 2004). Enrollment in Texas has increased every year over the past 18 years, with the second-highest annual increase ( $2.7 \%$ ) occurring in the 2005-06 school year (Table 2).

Between 1987-88 and 2005-06, the public schools served an increasingly diverse population of students. The rapid growth of the Hispanic population, in particular, brought greater linguistic and cultural diversity to the state. In 2004, the Texas State Data Center and Office of the State Demographer (TSDC/OSD) predicted Hispanics would become the largest ethnic group in the state by the year 2020 (TSDC/OSD, 2004). Hispanic student enrollment surpassed White enrollment in the public schools in 2001-02.

Increasing numbers and percentages of students met the state criteria of economic disadvantage. Under Texas Education Agency (TEA) guidelines, students were identified as economically disadvantaged if their parents or guardians documented their eligibility for free or reduced-price meals under the National School Lunch and Child Nutrition Program or if their families had other economic disadvantages, such as annual incomes at or below the federal poverty guidelines, eligibility for public assistance, or eligibility for food stamps (TEA, 2005b).

- Statewide enrollment during the 1987-88 school year was 3,224,916 students. By 2005-06, enrollment had risen to 4,521,043 students (Table 2).
- During the 18-year period between 1987-88 and 2005-06, total enrollment increased by 1,296,127 students, or 40.2 percent (Table 3).
- Each year, on average, statewide enrollment increased by 1.9 percent. The increase in 2005-06 included students from nearby states displaced by a hurricane (Table 2).

Table 2
Statewide Enrollment, Texas Public Schools, 1987-88 Through 2005-06

| Year | Number | Percent <br> change |
| :--- | ---: | ---: |

Table 3
Change in Statewide Enrollment, Texas Public Schools

| Period | Number | Percent |
| :--- | ---: | ---: |
| 10-year change, |  |  |
| 1995-96 to 2005-06 | 722,011 | 19.0 |
| 18-year change, |  |  |
| 1987-88 to 2005-06 | $1,296,127$ | 40.2 |

## Enrollment <br> by Ethnicity

- Between the 1995-96 and 2005-06 school years, enrollment increased for all ethnic groups except Whites. Enrollment for White students declined by 6.0 percent (Table 4). The total number of White students in Texas public schools has declined in each of the past eight school years.
- Hispanic enrollment had the largest numerical increase, rising by 650,199 students (or $46.5 \%$ ) over the decade (Figure 1). In 2005-06, Hispanic students (45.3\%) were the largest enrolled ethnic group in the state, followed by White students (36.5\%). The first school year in which the number of Hispanic students surpassed the number of White students was 2001-02.
- Enrollment of Asian/Pacific Islander students had the largest percentage increase, rising 60.7 percent during the 10 -year time period. Native American enrollment increased by 52.9 percent.
- African American enrollment as a percentage of total enrollment remained relatively stable at 14.3 percent to 14.4 percent for most of the decade, before increasing to 14.7 percent in 2005-06. The total number of African American students increased by 21.7 percent in the last ten years.

## Enrollment <br> by Economically Disadvantaged Status

- During the 1995-96 school year, there were $1,754,401$ economically disadvantaged students46.8 percent of all students. By 2005-06, the number of economically disadvantaged students had risen to $2,506,972$, or 55.5 percent of all students (Figure 2).
- Between 1995-96 and 2005-06, the number of economically disadvantaged students rose by 752,571 (Table 5). In contrast, the total public school population rose by 722,011 (Table 2 on page 5). The 42.9 percent increase in economically disadvantaged students exceeded the 19.0 percent increase in the public school population as a whole.

## Enrollment by Grade

Children in Texas are required to attend school beginning at age six (Texas Education Code §25.085, 2006). All children who are five years old on or before September 1 are eligible, but not required, to attend kindergarten. With few exceptions, children must attend school until they reach the age of 18.

Student learning during the early education and prekindergarten years is linked to future academic accomplishments, particularly for children identified as limited English proficient, disabled, and/or economically disadvantaged. In early education and prekindergarten programs, children develop skills necessary for success in the regular public school curriculum in the areas of language, mathematics, and social skills. Early education in Texas is a diverse set of programs designed for children who meet certain eligibility criteria. For example, Early Childhood Intervention is a coordinated system of services for children, birth to age three, with disabilities or developmental delays; and Even Start is a family literacy program for children from birth through age seven and a parent or guardian who will benefit from literacy education. Prekindergarten is available for children who are unable to speak and comprehend the English language, are educationally disadvantaged, or are homeless (Texas Education Agency [TEA], 2004).

A variety of factors affect enrollment trends at all grade levels, including grade-level retention, migration into the state, and decisions about private and home schooling. Funding for early childhood and kindergarten programs affects enrollment trends in the elementary grades, while student decisions to graduate early, transfer into General Educational Development (GED) programs, or drop out of school affect enrollment trends in the secondary grades.

Total Texas public school enrollment increased 2.7 percent between school years 2004-05 and 2005-06. The change in enrollment was marked by an increase in the number of students in all grades, with the exception of Grade 6 and early education (Table 7). Enrollment as a percentage of the total student population increased for kindergarten and Grades 3,5 , and 12 , and decreased for Grades $4,6,7$, and 8 . Enrollment in early education, which increased 5.1 percent from 2002-03 to 2003-04, decreased 8.7 percent from 2004-05 to 2005-06. Enrollment in prekindergarten increased 3.3 percent from 2004-05 to 2005-06, while enrollment in Grades K-12 increased 2.8 percent.

- During both the 2004-05 and 2005-06 school years, Grade 9 had the highest enrollment (Figure 3), in part because of high grade-level retention in Grade 9 compared to other grades (TEA, 2006). In 2005-06, over 392,000 students were enrolled in Grade 9.
- Across Grades K-12 in 2005-06, the percentage of total enrollment accounted for by each grade ranged from a low of 5.7 percent in Grade 12 to a high of 8.7 percent in Grade 9 (Table 7). The remaining grades ranged from 6.2 percent (Grade 11) to 7.9 percent (Grade 1) of total enrollment.
- Between 2004-05 and 2005-06, enrollment increased in each grade with the exception of EE and Grade 6. Enrollment in Grade 6 decreased by 1.4 percent between the two school years, in part because of high grade-level retention in Grade 5.

[^1]
## Enrollment <br> by Grade and Ethnicity

- By grade level, the proportion of enrollment accounted for by White students generally increased from kindergarten to Grade 12, whereas the proportion accounted for by Hispanic students generally decreased (Figure 4 and Table 8). This is, in part, a reflection of the overall Hispanic and White population trends in Texas: increasingly, there are more young, school-age Hispanic children than White children.
- The proportions of grade-level enrollment accounted for by African American, Asian/Pacific Islander, and Native American students were relatively stable across Grades 1-12 in 2005-06. There were greater variations in enrollment by grade for Hispanic and White students.
- Consistent with the requirements of targeted early education programs, Hispanics, who made up 45.3 percent of total enrollment in the 2005-06 school year, made up 64.7 percent of prekindergarten students. In contrast, White students, who made up 36.5 percent of total enrollment in 2005-06, made up 15.5 percent of prekindergarten students.
- From Grade 9 to Grade 12, Asian/Pacific Islander and White students increased as a proportion of the student body, and African American and Hispanic students decreased. This pattern held true in both the 2004-05 and 2005-06 school years.

## Enrollment

## by Grade and Economically Disadvantaged Status

- The overall percentage of students designated as economically disadvantaged increased from 54.5 percent to 55.5 percent between the 2004-05 and 2005-06 school years (Table 9).
- Across grade levels, the percentage of students who are reported as economically disadvantaged decreases from Grade 1 to Grade 12, a pattern which has held true for several years. In the 2005-06 school year, 61.5 percent of students in Grade 1 were economically disadvantaged, compared to 37.3 percent of students in Grade 12 (Figure 5).
- The largest percentage of economically disadvantaged students, by far, was found in prekindergarten, a program designed to serve the educational needs of low-income children and/or children learning to speak English.

Figure 5
Enrollment of Economically Disadvantaged Students by Grade, Texas Public Schools, 2005-06

| All grades | $2,397,700$ | 54.5 | $2,506,972$ | 55.5 |

## Enrollment for Instructional Programs and Special Populations

Texas public schools offer instructional programs designed to meet students' needs. Not all students are enrolled in one of these programs, and some students may be enrolled in more than one. For example, students identified as limited English proficient (LEP), who do not speak English as their primary language and have a limited ability to read, speak, write, or understand English, may participate in bilingual or English as a second language (ESL) programs. Students in Grades 6-12 can participate in career and technology courses that prepare them for the dual roles of family member and wage earner, and help them gain employment in high-skilled, high-wage jobs and/or advance to postsecondary education. Gifted and talented programs offer eligible students a continuum of learning experiences that leads to advanced accomplishments. Special education offers instructional and related services for eligible students with cognitive, physical, and/or emotional disabilities.

Title I is the largest federal aid program for elementary and secondary schools. The goal of Title I is to improve teaching and learning for at-risk students attending schools with high percentages of economically disadvantaged students. Students counted as Title I students may be participating in Title I-funded programs, or they may be enrolled in campuses that receive school-wide Title I assistance.

Enrollment for instructional programs and special populations in Texas public schools varied greatly between school years 1995-96 and 2005-06, remaining relatively stable in some areas but increasing rapidly in others. During this period, there were particularly large gains in both the number and percentage of students participating in career and technology programs (Figure 6) and the Title I program. By 2005-06, the number of students participating in career and technology education was 461,479 . Title I served almost 2.8 million students in 2005-06-over 61 percent of public school enrollment, compared to 33.9 percent in 1995-96. Enrollment in bilingual and ESL programs also rose substantially over the 10 -year period (Table 10). In contrast, the percentage of students participating in gifted and talented programs and special education programs peaked in the late 1990s and has decreased since then.

- Between school years 1995-96 and 2005-06, career and technology programs in the public schools experienced particularly large gains in enrollment. The number of students taking a sequence of career and technology courses rose 170.0 percent over the 10 -year period (Table 10), while overall enrollment grew 19.0 percent.
- The number of students participating in Title I programs also increased greatly, rising by 118.1 percent between 1995-96 and 2005-06.
- The number of students identified as LEP grew by 48.3 percent between 1995-96 and 2005-06, and the number of students receiving bilingual or ESL instructional services increased by 55.6 percent.
- The percentage of students served in special education programs rose from 11.6 percent of enrollment in 1995-96, to 12.2 percent of enrollment in the late 1990s, then fell to 11.3 percent in 2005-06. The actual number of students served in special education rose each year over the past 10 years with the exception of 2005-06, when the number of students served declined.
- The percentage of students participating in gifted and talented programs rose from 7.8 percent of enrollment in 1995-96 to 8.4 percent in 1999-00, but since then has declined to 7.6 percent.

## Enrollment <br> for Instructional Programs and Special Populations by Ethnicity

- Between school years 2004-05 and 2005-06, there were no significant changes in the distribution of students by ethnicity for instructional programs and special populations (Table 11). Analysis of program participation shows cases of under- and overrepresentation of ethnic groups in certain areas, compared to their percentages of the total student population.
- In 2005-06, African American students accounted for 14.7 percent of the total student population. In contrast, African Americans made up 18.2 percent of the special education population and 8.3 percent of students enrolled in gifted and talented programs (Figure 7).
- The percentage of Asian/Pacific Islanders in special education programs in 2005-06 (1.3\%) was lower than expected and their percentage of the gifted and talented program enrollment (6.6\%) was higher than expected, given their proportion of the total student population (3.1\%).
- In 2005-06, Hispanic students were 45.3 percent of the total public school population. The percentage of students participating in gifted and talented programs who were Hispanic was 32.4 percent, while Hispanic representation in Title I was 58.4 percent.
- Given their percentage of the total student population (36.5\%), the representation of White students in gifted and talented programs (52.4\%) was higher than expected, and their proportion of Title I program enrollment (23.6\%) was lower than expected.

## Enrollment

for Instructional Programs and Special Populations by Economically Disadvantaged Status

- The proportions of program participants and special populations who were economically disadvantaged varied little between the 2004-05 and 2005-06 school years (Table 12).
- Economically disadvantaged students made up 55.5 percent of all students in 2005-06 (Table 5 on page 8 ) and 61.5 percent of special education students (Figure 8).
- Across other instructional programs, the percentages of students who were economically disadvantaged varied considerably. Gifted and talented programs had the lowest percentage of economically disadvantaged students ( $32.4 \%$ ) in 2005-06, followed by career and technology courses (46.1\%).
- In bilingual and ESL programs, 88.5 percent of students were economically disadvantaged, which closely matched the percentage of LEP students identified as economically disadvantaged (87.9\%).

## Enrollment <br> for Instructional Programs and Special Populations by Gender

- There were no major changes in enrollment by gender for instructional programs or special populations between the 2004-05 and 2005-06 school years (Table 13).
- Females and males, who comprised 48.7 percent and 51.3 percent, respectively, of total student enrollment in 2005-06, accounted for similar proportions of students who were identified as LEP, and similar proportions of students who were enrolled in bilingual and ESL programs, career and technology programs, and Title I programs.
- Special education programs showed the greatest disparity between female and male participation (Figure 9). In 2005-06, males in the special education population outnumbered females by more than two-to-one, comprising 66.9 percent and 33.1 percent, respectively, of special education enrollment.
- Females were somewhat overrepresented in gifted and talented programs (51.6\%), while males were underrepresented (48.4\%).

## Enrollment by District Type

Texas school districts are classified into nine types based on community features: major urban; major suburban; other central city; other central city suburban; independent town; non-metropolitan: fast growing; non-metropolitan: stable; rural; and charter school district. District types are based on overall size, rate of growth, student economic status, and proximity to urban areas, with open-enrollment charter school districts forming a separate category (see Appendix A on page 46). Large, urban school districts serve the six metropolitan areas of Austin, Dallas, El Paso, Fort Worth, Houston, and San Antonio. In rural areas of the state, students are served by more than 400 districts.

Analyses in this section are based on enrollment by district type from 1995-96 through 2005-06. As with the overall Texas population during this time period, there were changes in student population in certain geographic areas of the state. There was a gradual population shift away from the rural, less densely populated areas of the state, to more concentrated, urban and suburban population centers. Most remarkable was the 64.9 percent enrollment growth in other central city suburban districts, that is, districts located in and around large Texas cities exclusive of the six cities above (Figure 10). This increase was over three times the 19.0 percent increase in total public school enrollment in the state (Table 14).

- Between 1995-96 and 2005-06, two district types experienced particularly high gains in student population. Enrollment in other central city suburban districts increased 64.9 percent, and enrollment in major suburban districts increased 35.3 percent (Table 14). Districts in independent towns, rural districts, and non-metropolitan stable districts experienced enrollment decreases of 16.7 percent, 12.9 percent, and 12.4 percent, respectively. The greatest decrease was in the category of non-metropolitan fast-growing districts. Enrollment in this category declined by 73.8 percent from 1995-96 to 2005-06, in part because the number of districts in the category declined from 117 to 27.
- Texas school districts with high population concentrations (major urban, major suburban, other central city, and other central city suburban) accounted for 80.6 percent of total student enrollment in school year 2005-06, increasing from 73.2 percent in 1995-96 (Table 14). Districts with low population concentrations (independent town, non-metropolitan: fast growing, non-metropolitan: stable, and rural) accounted for 17.8 percent of enrollment in 2005-06, a decrease from 26.8 percent in 1995-96.
- Charter schools, which started in 1996-97, enrolled 70,904 students in 2005-06, or 1.6 percent of Texas public school students. Most charter schools are located in urban areas.
- The percentage of students being served in rural areas decreased from 4.3 percent of total public school enrollment to 3.2 percent during this period. Districts in rural areas account for just over onethird (35.0\%) of Texas public school districts.

## Enrollment

## by District Type and Ethnicity

- Between 1995-96 and 2005-06, major suburban districts reported considerable increases in the numbers of Hispanic (91.8\%), African American (73.0\%), and Asian/Pacific Islander (70.6\%) students (Figure 11). The only group in these districts that experienced a decrease in enrollment was White students, which declined by 4.9 percent.
- Major urban districts also reported significant increases in the enrollment of Asian/Pacific Islander and Hispanic students during this period ( $53.8 \%$ and $37.1 \%$, respectively), but the enrollment of African American students decreased by 5.9 percent.
- In other central city suburban districts, enrollment increased for all ethnic groups, with particularly large increases in the numbers of Hispanic students (70.5\%) and White students (62.7\%). Enrollment in other central city districts also increased for all groups with the exception of White students, who experienced a decrease of 5.7 percent (Table 15).
- Districts in independent towns and rural districts experienced increases in the enrollment of Asian/Pacific Islander, Hispanic, and Native American students, and decreases in the enrollment of African American and White students. Non-metropolitan stable districts also experienced increases in the enrollment of Asian/Pacific Islander and Native American students, but enrollment for the other three ethnic groups declined. In non-metropolitan fast-growing districts, enrollment declined across all ethnicities.

## Enrollment

## by District Type and Economically Disadvantaged Status

- With the exception of major suburban districts and non-metropolitan fast-growing districts, more than half of all public school students enrolled in the 2005-06 school year were economically disadvantaged. Major urban districts had the greatest proportion of students who were economically disadvantaged. In 2005-06, economically disadvantaged students represented 71.3 percent of total enrollment in major urban districts, an increase from 64.4 percent in 1995-96 (Table 16).
- Major suburban districts reported the greatest gain in the number of economically disadvantaged students, increasing by 85.1 percent from 1995-96 to 2005-06 (Figure 12). Enrollment of economically disadvantaged students in other central city suburban districts also increased significantly (78.8\%). In 1995-96, economically disadvantaged students represented 32.7 percent of the student population in major suburban districts and 49.9 percent in other central city suburban districts. By 2005-06, they represented 44.0 percent and 53.5 percent, respectively.
- Non-metropolitan fast-growing districts were the only districts to report an overall decline (72.1\%) in the number of economically disadvantaged students during this period.
- Districts in independent towns, non-metropolitan stable districts, and rural districts reported small increases in the number of economically disadvantaged students ( $4.8 \%, 4.4 \%$, and $0.5 \%$ respectively).

## Enrollment by Education Service Center

Regional education service centers (ESCs) are non-regulatory, public institutions created and authorized by the Texas Legislature. Their associations with school districts are collaborative and supportive. Texas is divided into 20 service center regions, and each region has its own ESC. Some of the primary goals of ESCs are to work with the Texas Education Agency and districts to improve student achievement, help districts become more cost effective and efficient, and assist in the implementation of laws passed by the Texas Legislature and regulations adopted by the commissioner of education and State Board of Education.

Eleven ESC regions experienced gains in student enrollment between the 1995-96 and 2005-06 school years, while the other nine saw declines (Figure 13). Four of the six regions experiencing increases of 25 percent or more include a major urban district (Austin, Dallas, Fort Worth, and Houston Independent School Districts). The fifth high-growth region is ESC Region 1 (Edinburg), which includes a number of immigrant communities along the southern border with Mexico. Region 6 (Huntsville), which includes some of the rapidly expanding districts north of Houston, is the sixth high-growth region.

- During the 1995-96 school year, ESC Region 4 (Houston) served the largest student population: 21.0 percent of the total state public school enrollment. In 2005-06, Region 4 continued to serve the largest proportion of total state enrollment (22.2\%) (Table 17).
- In 1995-96, Region 9 (Wichita Falls) served the smallest population: 1.1 percent of the total state public school enrollment. Region 9 remained the smallest in 2005-06, with 0.9 percent of total state enrollment.
- Region 13 (Austin) experienced the greatest percentage gain between 1995-96 and 2005-06, increasing in student population by 35.7 percent. Region 14 (Abilene) had the greatest loss, decreasing by 12.7 percent during this time period.

## Enrollment <br> by Education Service Center and Ethnicity

- Comparing all ESC regions from 1995-96 to 2005-06, the largest percentage increase in African American enrollment was in Region 1 (Edinburg) and the largest numeric increase was in Region 4 (Houston) (Table 18).
- Hispanic enrollment rose in all 20 ESC regions during the period (Figure 14). The number of Hispanic students more than doubled in Regions 6 (Huntsville), 7 (Kilgore), 8 (Mt. Pleasant), 10 (Richardson), and 11 (Fort Worth).
- White student enrollment increased in only 3 of the 20 ESC regions during the decade: Region 6 (Huntsville), Region 11 (Fort Worth), and Region 13 (Austin). More than half the regions experienced declines of 15.0 percent or more in White enrollment. Region 13 (Austin) had the greatest gain in White enrollment (12.5\%), and Region 19 (El Paso) had the greatest decline (36.7\%).

## Enrollment

by Education Service Center and Economically Disadvantaged Status

- From 1995-96 to 2005-06, the percentage of students who were economically disadvantaged increased in every ESC region of the state (Table 19). In 1995-96, six regions-Region 1 (Edinburg), Region 2 (Corpus Christi), Region 17 (Lubbock), Region 18 (Midland), Region 19 (El Paso), and Region 20 (San Antonio)-served populations in which over 50 percent of students were economically disadvantaged. By 2005-06, all regions except Region 6 (Huntsville), Region 9 (Wichita Falls), Region 11 (Fort Worth), and Region 13 (Austin) had economically disadvantaged populations of over 50 percent.
- Region 1 (Edinburg) had the highest percentage (85.4\%) of disadvantaged students in 2005-06, and Region 11 (Fort Worth) had the lowest (40.5\%). These two districts also had the highest and lowest percentages of economically disadvantaged students, respectively, in 1995-96.
- Of the nine regions that showed a decrease in total enrollment during the period (Figure 13 on page 35), all but one (Region 18 - Midland) saw an increase in the number of economically disadvantaged students (Figure 15).

## National Enrollment Trends

The total population, the number of school age children, and public school enrollment are growing at a faster rate in Texas than in the U.S. From 1995 to 2005, the estimated total population in Texas increased from $18,724,000$ to $22,859,968$, or 22.1 percent, compared to a 12.8 percent increase in the U.S. (U.S. Bureau of the Census, 1995b, 2005). From 1995 to 2004, the estimated number of children ages $5-17$ in Texas increased from $3,818,000$ to $4,423,971$, or 15.9 percent. In the U.S., the number of children ages 5-17 increased by 8.3 percent (U.S. Bureau of the Census, 1995a, 2004). From 1993 to 2003, national figures indicate that public school enrollment in Texas increased by 20.1 percent, compared to an 11.7 percent increase in the U.S. During this time period, the Texas public school system added 723,489 students, and U.S. public schools added 5,075,809 students (NCES, 2006a).

In fall of 2003, according to national figures, Texas public school enrollment was 14.3 percent African American, 2.9 percent Asian/Pacific Islander, 43.8 percent Hispanic, 0.3 percent Native American, and 38.7 percent White. By comparison, U.S. public school enrollment was 17.2 percent African American, 4.4 percent Asian/Pacific Islander, 18.5 percent Hispanic, 1.2 percent Native American, and 58.7 percent White. Between 1993 and 2003, the proportion of enrollment accounted for by Hispanic students showed the largest increase among ethnic groups both in Texas (increasing from $35.5 \%$ to $43.8 \%$ ) and the nation (increasing from $12.7 \%$ to $18.5 \%$ ). During the time period, the proportion of enrollment accounted for by White students decreased from 47.7 percent to 38.7 percent in Texas, and from 66.1 percent to 58.7 percent in the U.S. Throughout the period, Texas had a much higher percentage of Hispanic students and a lower percentage of White students than the nation as a whole (NCES, 2006a).

Eligibility for the National School Lunch and Child Nutrition Program, which provides free- and reduced-price meals to students from low-income families, is used as an indicator of student socioeconomic status. National figures indicate that 47.4 percent of public school students in Texas were eligible for free- or reduced-price meals during the 2003-04 school year, compared to 36.3 percent in the U.S. (NCES, 2006b). Eligibility figures for the U.S. for 1993-94 are not available; nevertheless, in the 39 states for which 1993-94 figures are available, the percentage of eligible students ranged from a low of 12.6 percent to a high of 55.1 percent. In Texas, 38.8 percent of students were eligible in 1993-94 (NCES, 1997b).

A higher percentage of public school students participated in special education programs across the U.S. (12.4\%) in the 1995-96 school year than in Texas (11.8\%) (NCES, 1997a). By 2003-04, participation in special education had increased to 13.7 percent in the U.S., but had remained relatively stable (11.7\%) in Texas (NCES, 2006a).

Students identified as limited English proficient (LEP) are eligible to participate in bilingual or English as a second language (ESL) programs. National figures indicate that the percentage of public school students identified as LEP in 1993-94 was higher in Texas (11.2\%) than in the nation (6.7\%). Although students identified as LEP increased between 1993-94 and 2003-04 both in Texas (to 15.3\%) and in the nation (to $10.1 \%$ ), the percentage of LEP students in Texas remained higher (National Clearinghouse for English Language Acquisition and Language Instruction Educational Programs, 2004, 2005).

In the 35 states for which public school gifted and talented program figures are available for the 1989-90 school year, the percentage of students identified as eligible to participate in the gifted and talented programs ranged from a low of 1.0 percent to a high of 11.6 percent. In Texas, the percentage of students identified as gifted and talented was 6.2 percent of total enrollment (NCES, 1995). By 2000, all 50 states had gifted and talented programs in place, with the percentage of students identified as gifted and talented ranging from a low of 1.1 percent to a high of 13.9 percent. National figures indicate that 9.0 percent of Texas students were identified as gifted and talented in 2000. Across the nation, 6.3 percent of public school students were identified as gifted and talented (NCES, 2006a).

## Appendix A. District Type Definitions

Districts are grouped into eight subcategories, ranging from major urban to rural, based on factors such as enrollment, growth in enrollment, economic status, and proximity to urban areas. Charter school districts make up a ninth subcategory. The subcategories are as follows.

Major Urban. A district is classified as major urban if: (a) it is located in a county with a population of at least 700,000; (b) its enrollment is the largest in the county or at least 75 percent of the largest district enrollment in the county; and (c) at least 35 percent of enrolled students are economically disadvantaged. A student is reported as economically disadvantaged if he or she is:

- eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- from a family with annual income at or below the federal poverty line;
- eligible for Temporary Assistance to Needy Families or other public assistance;
- a recipient of a Pell Grant or comparable state program of need-based financial assistance;
- eligible for programs assisted under Title II of the Job Training Partnership Act; or
- eligible for benefits under the Food Stamp Act of 1977.

Major Suburban. A district is classified as major suburban if: (a) it does not meet the criteria for classification as major urban; (b) it is contiguous to a major urban district; and (c) its enrollment is at least 3 percent that of the contiguous major urban district or at least 4,500 students. A district also is classified as major suburban if: (a) it does not meet the criteria for classification as major urban; (b) it is not contiguous to a major urban district; (c) it is located in the same county as a major urban district; and (d) its enrollment is at least 15 percent that of the nearest major urban district in the county or at least 4,500 students.

Other Central City. A district is classified as other central city if: (a) it does not meet the criteria for classification in either of the previous subcategories; (b) it is not contiguous to a major urban district; (c) it is located in a county with a population of between 100,000 and 699,999; and (d) its enrollment is the largest in the county or at least 75 percent of the largest district enrollment in the county.

Other Central City Suburban. A district is classified as other central city suburban if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it is located in a county with a population of between 100,000 and 699,999; and (c) its enrollment is at least 15 percent of the largest district enrollment in the county. A district also is other central city suburban if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it is contiguous to an other central city district; (c) its enrollment is greater than 3 percent that of the contiguous other central city district; and (d) its enrollment exceeds the median district enrollment for the state of 726 students.

Independent Town. A district is classified as independent town if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it is located in a county with a population of 25,000 to 99,999 ; and (c) its enrollment is the largest in the county or greater than 75 percent of the largest district enrollment in the county.

Non-Metropolitan: Fast Growing. A district is classified as non-metropolitan: fast growing if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it has an enrollment of at least 300 students; and (c) its enrollment has increased by at least 20 percent over the past five years.

Non-Metropolitan: Stable. A district is classified as non-metropolitan: stable if: (a) it does not meet the criteria for classification in any of the previous subcategories; and (b) its enrollment exceeds the median district enrollment for the state.

Rural. A district is classified as rural if it does not meet the criteria for classification in any of the previous subcategories. A rural district has either: (a) an enrollment of between 300 and the median district enrollment for the state and an enrollment growth rate over the past five years of less than 20 percent; or (b) an enrollment of less than 300 students.

Charter School Districts. Charter school districts are open-enrollment school districts chartered by the State Board of Education. Established by the Texas Legislature in 1995 to promote local initiative, charter school districts are subject to fewer regulations than other public school districts. Generally, charter school districts are subject to laws and rules that ensure fiscal and academic accountability but that do not unduly regulate instructional methods or pedagogical innovation. Like other public school districts, charter school districts are monitored and accredited under the statewide testing and accountability system.

# Compliance Statement 

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
