Special thanks to Debra Craig from the College Board and Glen Gullikson from ACT, Inc. for their kind reviews of this report.

Citation. Texas Education Agency. (2006). College admissions testing of graduating seniors in Texas high schools, class of 2005 (Document No. GE07 601 01). Austin, TX: Author.

Abstract. This annual report examines SAT and ACT participation and performance in Texas for the graduating class of 2005. A total of 140,003 Texas public school graduates took the SAT, ACT, or both in 2005. The percentage of graduates who took the SAT, ACT, or both increased from 61.9 percent for the class of 2004 to 65.5 percent for the class of 2005 . The percentage of examinees achieving the Academic Excellence Indicator System (AEIS) criterion score on either test increased slightly from 27.0 percent in 2004 to 27.4 percent in 2005. In addition, the percentage of examinees achieving the AEIS criterion score increased for most student groups from 2004 to 2005. In 2005, the average SAT Verbal and Math scores for Texas public schools were 490 and 502, respectively. The average ACT composite score was 20.0. The percentage of public and non-public graduates taking the SAT was higher in Texas (54\%) than nationally (49\%); the percentage of public and non-public graduates taking the ACT was lower in Texas (29\%) than nationally ( $40 \%$ ).

Keywords. SAT, ACT, college admission, testing, acknowledgment, accountability, high school, scores, graduate, TASP, THEA, TSI.

## Highlights

## Texas Public Schools

## Texas and the United States

## Texas Public Schools

## Academic Excellence Indicator System Measures

## Participation

- A total of 140,003 Texas public high school graduates in the class of 2005 took the SAT, the ACT, or both. This was up from 135,646 graduates in the class of 2004 . The number of examinees in 2005 reflects an overall participation rate of 65.5 percent.
- White graduates participated in either the SAT, the ACT, or both at a rate of 70.7 percent. African American graduates participated at a slightly lower rate of 66.2 percent, and Hispanic graduates participated at a rate of 50.7 percent.

## Performance

- For the class of 2005, 27.4 percent of examinees achieved the criterion score on either the SAT or ACT. For the class of 2004, 27.0 percent of examinees met the criterion.
- Whereas 38.7 percent of White examinees met the criterion scores, 11.0 percent of Hispanic examinees and 8.1 percent of African American examinees met the criterion scores.

## SAT

## Participation

- A total of 113,261 public high school graduates in the class of 2005 took the SAT examination. The participation rate ( $53.0 \%$ ) in 2005 increased from the previous year ( $49.8 \%$ for the class of 2004).
- The participation rates in SAT testing by ethnicity were 82.8 percent of Asian/Pacific Islander graduates, 53.1 percent of White graduates, 50.5 percent of African American graduates, and 36.6 percent of Hispanic graduates.

## Performance

- The mean SAT Verbal and Mathematics combined score for Texas public school graduates in the class of 2005 was 991 , an increase from 987 for the class of 2004.
- For the class of 2005, Asian/Pacific Islander examinees obtained the highest average SAT Verbal and Mathematics combined score at 1095, and African American examinees obtained the lowest average SAT Verbal and Mathematics combined score at 854.

## ACT

## Participation

- A total of 63,615 Texas public high school graduates in 2005 took the ACT examination. This is a participation rate of 29.8 percent, an increase from 28.9 percent for the class of 2004.
- The participation rates in ACT testing by ethnicity were 30.3 percent of White graduates, 31.2 percent of African American graduates, 23.0 percent of Asian/Pacific Islander graduates, and 21.8 percent of Hispanic graduates.

## Performance

- The mean ACT Composite score for 2005 Texas public high school graduates was 20.0, down one-tenth of a point from 20.1 for the class of 2004.
- For the class of 2005, Asian/Pacific Islander examinees obtained the highest average ACT Composite score at 22.4, and African American examinees obtained the lowest average ACT Composite score at 17.0.

## Texas and the United States

## SAT

- A total of 133,115 Texas public and non-public high school graduates in 2005 took the SAT, resulting in a participation rate of 54 percent, up from 52 percent for the class of 2004. Nationally $1,475,623$ public and non-public high school graduates in 2005 took the SAT. The national participation rate for 2005 was 49 percent, up from 48 percent in 2004.
- The mean SAT Verbal and Mathematics combined score for Texas public and non-public high school graduates in the class of 2005 was 995 , up three points from 992 for the class of 2004. The national mean SAT Verbal and Mathematics combined score in 2005 was 1028, up two points from 1026 in 2004. Average SAT subject scores for all examinees were higher nationally than in Texas.
- The percentages of African American examinees were comparable in Texas (11.7\%) and in the United States ( $10.4 \%$ ). Whereas Hispanics made up 23.9 percent of the test-taking population in Texas, they made up only 9.8 percent of the test-taking population nationally. The percentage of White examinees was 7.2 percentage points lower in Texas ( $48.7 \%$ ) than in the nation (55.9\%).
- A total of 72,294 Texas public and non-public high school graduates in 2005 took the ACT, for a participation rate of 29 percent, the same as the rate from 2004. Nationally, 1,186,251 public and non-public high school graduates in 2005 took the ACT. The national participation rate for 2005 was the same as that from 2004: 40 percent.
- The mean ACT Composite score for Texas public and non-public high school graduates in the class of 2005 was 20.2 , the same as in 2004. The mean Composite score nationally for the class of 2005 was 20.9 , the same as in 2004. Average ACT subject scores for all examinees were higher nationally than in Texas.
- The percentages of African American examinees were comparable in Texas (13.2\%) and in the United States $(11.7 \%)$. Whereas Hispanics made up 24.9 percent of the test-taking population in Texas, they made up only 7.0 percent of the test-taking population nationally. The percentage of White examinees was 16.6 percentage points lower in Texas (49.3\%) than in the nation (65.9\%).

## Overview

## Overview

This report provides results for graduating seniors in the class of 2005 on the SAT Reasoning Test, sponsored by the College Board and published by the Educational Testing Service, and on the ACT Assessment, published by ACT, Inc. The first section of the report provides general information on the SAT and ACT examinations and discusses specific uses of college admissions test scores in Texas. The second section describes data sources, methodological considerations for reporting participation and performance results, and considerations for interpretation of results.

The third section provides SAT and ACT results for the class of 2005 in Texas public schools. Participation rates and performance on the examinations are provided for all examinees and by ethnicity and gender. In addition, trends in participation and performance are examined for the graduating classes of 1996 through 2005. The fourth section provides comparisons of SAT and ACT performance for all graduates in public and non-public schools in Texas and in the nation as a whole. The section includes SAT and ACT scores for all 50 states, along with the percentages of graduates who took the tests in each state.

SAT and ACT results for each school district and public school in Texas are presented in the companion volume to this report, College Admissions Testing of Graduating Seniors in Texas High Schools, Class of 2005: District and Campus Supplement (TEA, 2006a).

# College Admissions Testing: The SAT and ACT 

General Information

Use of Individual SAT and ACT Scores

## General Information

## The Examinations

SAT Reasoning Test. The SAT is a critical-reasoning examination that assesses developed verbal and mathematics reasoning skills. Although it assesses academic skills that are essential for success in college, it is not tied to a specific curriculum. The examination consists of two sections on which examinees receive scores: Verbal and Mathematics. Scores on both sections range from 200 to 800 .

In March of 2005, several changes were made to the examination: (a) the SAT I: Reasoning Test became the SAT Reasoning Test, (b) the Verbal section became the Critical Reading Section, (c) the Mathematics section was expanded to cover three years of high school mathematics, and (d) a Writing section that consists of a multiple-choice section and a written essay was added (College Board, 2003a). Results from the new SAT will be reported for the 2006 graduating class.

ACT. The ACT examination is an achievement test that measures learned knowledge in four curriculum-based areas: English, Mathematics, Reading, and Science. Examinees receive four scores, corresponding to the four skill areas. A Composite score, calculated as the average of the four section scores, is also assigned. Scores on each of the four sections and the Composite score range from 1 to 36 .

In 2003, the section formerly known as Science Reasoning was renamed Science, but there was no change in content. Beginning in February 2005, an optional writing test that consists of a written essay was added to the ACT (ACT, Inc., 2003c). Results from the new writing test will be reported for the 2006 graduating class.

SAT and ACT Score Reporting. An individual student's performance on the SAT and ACT is reported as a set of scaled scores, which are normative standard scores calculated from raw scores. For each scaled score there is a corresponding percentile rank, which is the percentage of test takers who score below that particular scaled score. For example, if a test taker scores at the 90th percentile, 90 percent of the test takers received lower scaled scores. Although the difficulty of test items and tests may change from test form to test form or from year to year, statistical equating ensures that any given score indicates the same level of student ability across test forms or testing dates (for a discussion of SAT test equating, see College Board, 2006b; for a discussion of ACT test equating, see ACT, 2001c).

## Access to Testing

Unlike many state assessments, the SAT and ACT examinations are voluntary. Depending on their college plans, students may take either, both, or neither of the examinations. Participation in SAT or ACT testing is influenced by many factors such as the decision to apply to a four year college or university. Barriers such as financial hardship and disability also could influence the decision to participate in testing. The state of Texas and the testing companies have implemented policies to help overcome barriers to testing.

Test fee waivers from the College Board and from ACT, Inc. are available to junior and senior high school students based on economic need. Eligibility criteria include: (a) falling below a certain level of family income, (b) receiving public assistance, (c) living in a foster home, (d) living in a federally subsidized public housing project, and (e) participating in programs for the economically disadvantaged, such as Upward Bound and TRIO. Students may receive a maximum of two fee waivers for the SAT. Students may receive only one fee waiver for the ACT. In many Texas schools and districts, students who do not meet the criteria for College Board or ACT, Inc. may receive waivers if they meet local criteria and local funding is available.

Both the College Board and ACT, Inc. provide special services for students with disabilities. To qualify, students must have documented needs for testing accommodations. Students must also be receiving special accommodations for classroom tests. Texas State Board of Education rules on testing accommodations for classroom tests are specified in Title 19 of the Texas Administrative Code [TAC], §101.29, 2002. When reporting examination results, neither the College Board nor ACT, Inc. identify students who take the tests under special circumstances.

The College Board and ACT, Inc. produce publications that provide information about the SAT and ACT examination programs. Information on the tests, examination fees, fee waivers, and services for students with disabilities is available through the organizations' websites, www.collegeboard.com and www.act.org.

## Use of Individual SAT and ACT Scores

## College Admissions and Placement

College admissions tests are measures of readiness for first-year college-level academic work. SAT or ACT scores are used by a majority of colleges and universities in the college admissions selection process (Breland et al., 2002). As norm-referenced tests, the SAT and ACT can be used to predict success in college studies, although, according to the Standards for Educational and Psychological Testing, "any decision about a student should not be based on the results of a single test, but should include other relevant and valid information" (American Educational Research Association, American Psychological Association, and National Council on Measurement in Education, 1999). Most institutions of higher education do, in fact, include other relevant and valid information in admission decisions, including high school grade point average, class rank, courses taken, and participation in extracurricular activities (Rigol, 2003).

In Texas, each institution of higher education establishes its own criteria for admissions (Texas Higher Education Coordinating Board, 2004). Most take into consideration some combination of college admission test scores and school achievement records. In addition, with the introduction of the writing section to the new SAT, many Texas colleges and universities have begun requiring writing scores as part of their admission process (College Board, 2006a). The SAT and ACT standards vary according to the selectivity of the institution. Some institutions allow high school records and scores on college admissions tests to compensate for each other; for example, a higher
class rank may compensate for a lower SAT or ACT score. Some institutions maintain open admissions policies, under which any person with a high school diploma or its equivalent may be accepted. Still other institutions guarantee admission to students who graduate from Texas high schools in the top percentages of their classes. Texas public institutions of higher education are required by law to admit applicants graduating from Texas public secondary schools with class ranks in the top 10 percent of their high school classes in one of the two years prior to the academic year of application (Texas Education Code [TEC] §51.803, 2000).

In addition to their use as admissions tools by colleges and universities, the SAT and ACT are also used to award scholarships to students and to place students in the appropriate freshman courses (ACT, Inc., 2003d). Morgan and Michaelides (2005) provide a summary of the various methods that are available for creating cutoff scores for college placement.

## Exemption from TSI Testing in Texas

In 1987, the Texas Legislature established a system of testing and remediation called the Texas Academic Skills Program, or TASP (TEC $\S 51.306,2004$ ). In 2003, TASP was replaced by the Texas Success Initiative, or TSI (TEC $\S 51.3062,2004)$. Under the TSI program, undergraduate students enrolling for the first time in public institutions of higher education are required to take an assessment designed to evaluate their readiness for freshman level academic coursework. The TSI examination results cannot be used as a condition of admission to an institution, but at least one of the examinations must be taken prior to enrollment. In the event that students fail to meet TSI standards, the colleges or universities in which they are enrolling are responsible for the development of personalized plans designed to prepare them for freshman level coursework. Students may retake the examinations at any time.

The legislature created TSI exemptions based on student performance on the SAT, the ACT, and the exit-level Texas Assessment of Academic Skills (TAAS) or exit-level Texas Assessment of Knowledge and Skills (TAKS) (19 TAC $\S 4.54,2004)$. To qualify for an exemption based on the SAT or ACT, a student must receive a specified minimum score in one of the five years prior to enrollment in a public institution of higher education. On the ACT, a student must receive a Composite score of at least 23 and English and Mathematics scores of at least 19 each. On the SAT, a student must receive Verbal and Mathematics scores of at least 500 each and a combined score of at least 1070. To qualify for an exemption based on the TAAS or TAKS, a student must receive a specified minimum score in one of the three years prior to enrollment. On the TAAS, a student must achieve a Texas Learning Index (TLI) score of 81 or higher on the reading test, a TLI score of 77 or higher on the mathematics test, and a scale score of 1540 or higher on the writing test. On the exit-level TAKS, a student must achieve the Higher Education Readiness standard of 2200 in mathematics and/or 2200 in English/Language Arts with a writing subsection score of at least 3 .

## Gold Performance Acknowledgment in the Texas Academic Excellence Indicator System

In 1993, the Texas legislature enacted statutes mandating creation of the Texas public school accountability system to evaluate school districts and campuses. Base indicators in the Academic Excellence Indicator System (AEIS), such as TAKS performance, performance on the StateDeveloped Alternative Assessment II (SDAA II), completion rate, and dropout rate, are used to determine accountability ratings. In addition, the Texas legislature enacted the Gold Performance Acknowledgment (GPA) system in 2001 to acknowledge districts and campuses for high performance on indicators such as advanced course completion and performance on the SAT or ACT (TEA, 2006c). The system replaced the Additional Acknowledgments process that had been part of the accountability system since 1994.

The SAT/ACT GPA indicator has two components: the percentage of non-special education graduates tested and the percentage of examinees scoring at or above a criterion score. For a district or campus to meet the GPA standard, at least 70 percent of non-special education graduates must have taken the SAT and/or ACT, and at least 40 percent of the examinees must have met a criterion score. To meet the criterion, students must achieve at least 1110 on the SAT Verbal and Mathematics combined score or 24 on the ACT Composite. Standards must be met for each student group (African American, Hispanic, and White), as well as for all students combined. Further information on college admissions test indicator definitions and acknowledgment standards for 2006 as they pertain to the 2005 SAT and ACT examination results can be found in the 2006 accountability manual (TEA, 2006c).

SAT and ACT criterion scores for recognition of high campus and district performance were established by the Commissioner of Education in 1996. The scores are used only for public school accountability purposes through the GPA system. The Commissioner of Education criterion scores are not used by colleges to evaluate students for admission. The criteria for admission into a college or university can be obtained from the institution itself.

## Data Sources and Reporting

Data Sources

Methodological Considerations in Data Reporting

Interpretation of Results

## Data Sources

## Texas Public Schools

The College Board provides to the Texas Education Agency (TEA) annual examination results and demographic information for Texas public high school SAT examinees. Similarly, ACT, Inc. provides to TEA annual examination results and demographic information for Texas public high school ACT examinees. Students may take the SAT and ACT examinations more than once, but TEA receives and reports only the results of examinees' most recent examinations. For this report, examination results for the 2005 graduating class from Texas public schools were developed through analyses of the data provided by the College Board and ACT, Inc. Historical SAT and ACT results for Texas public high schools were obtained from previous TEA annual reports (TEA, 1997, 1998, 1999, 2000, 2001, 2003, 2004a, 2004b, 2006b). These results are presented in the section, Results for Texas Public Schools, on page 17.

TEA receives scores from the testing companies based on year of graduation. Although students other than graduating seniors, primarily high school juniors, may take the SAT and ACT examinations, the results in this report are based on the scores of only those students identified by the College Board and ACT, Inc. as having graduated in the reporting year. When registering for SAT or ACT examinations, a student is asked to provide his or her expected year of graduation. The testing agencies use information such as the student-reported expected year of graduation to determine whether or not examinees graduated in the reporting year.

## Combined Public and Non-public Schools in Texas and the United States

Results for all combined public and non-public examinees in Texas and the nation were obtained from summary reports released annually by the College Board (College Board, 1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b, 2002b, 2002c, 2003b, 2003c, 2004a, 2004b, 2005a, 2005b) and by ACT, Inc. (ACT, Inc., 1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b, 2002a, 2002b, 2003a, 2003b, 2004a, 2004b, 2005a, 2005b). As with data reported by TEA, annual reports provided by the testing agencies include only the results of examinees' most recent examinations. Additionally, the results in the reports are based on the scores only of students identified by the College Board and ACT, Inc. as having graduated in the reporting year. The results are presented in the section, Results for Texas and the United States, on page 39.

## Methodological Considerations in Data Reporting

## Coding and Reporting of Ethnicity

The College Board uses the SAT Questionnaire, and ACT, Inc. uses the Student Profile Section (SPS) and the ACT examination answer form to obtain self-reported descriptive information such as
ethnicity. The questionnaires are completed when students register for the SAT or ACT examinations. Students may register online or by paper through the mail. In TEA's Public Education Information Management System (PEIMS), demographic information such as ethnicity is reported to TEA by school districts. The data are submitted by districts at the beginning of the fall semester of each school year.

Because different data collection methods are used, ethnicity information may be inconsistent among the College Board, ACT, Inc., and TEA. The College Board's SAT Questionnaire asks students to describe themselves by choosing one of eight ethnic categories: American Indian or Alaskan Native; Asian, Asian American, or Pacific Islander; African American or Black; Mexican or Mexican American; Puerto Rican; Latin American, South American, Central American, or other Hispanic or Latino; White; or other. Three of the eight categories may be combined into one "Hispanic" group, leaving six categories. The ACT's SPS asks students to choose one of nine phrases to best describe their racial/ethnic backgrounds: African American/Black (non-Hispanic); American Indian, Alaskan Native; Caucasian American/White (non-Hispanic); Mexican American/Chicano/Latino; Asian American, Pacific Islander; Puerto Rican, Cuban, other Hispanic; other; multiracial; or "I prefer not to respond." Two of the nine phrases may be combined into one "Hispanic" group, leaving eight categories. TEA requires, for data submissions to PEIMS, that districts choose one of five ethnicity categories for each child enrolled: American Indian or Alaskan Native; Asian or Pacific Islander; Black, not of Hispanic origin; Hispanic; or White, not of Hispanic origin.

The inconsistency in the ways that the College Board, ACT, Inc., and TEA code and report ethnicity can lead to problems in the calculation of participation rates by ethnic groups. In the SAT and ACT sections of the section, Results for Texas Public Schools, on page 17, the numbers of examinees within each ethnic group were obtained from College Board and ACT, Inc. using selfreported ethnicity, whereas the number of Texas public school graduates by ethnic group was obtained from PEIMS. Consequently, the ratio of examinees to the total number of graduates in each ethnic group uses ethnicity information collected by the testing agencies in the numerator but PEIMS ethnicity information in the denominator. For tables in this report where the number of examinees in a particular student group is larger than the number of graduates in that student group, the percentage of graduates tested appears as 100. This is most likely to occur for very small groups, such as Native Americans (for example, see Table 5 on page 26). In the Academic Excellence Indicator System (AEIS) section of the same chapter, all ethnicity information was obtained from PEIMS, so the numerator and denominator in the calculation of participation rates use ethnicity information from the same source.

## Reporting of Ethnicity by Examinees

While a majority of students respond to the questionnaires provided by the College Board and ACT, Inc., some do not. Additionally, students who do respond to the questionnaires may not respond to all questions. Fluctuating trends in self-reported ethnicity information, including variable nonresponse rates, may bias analyses of college entrance examination participation rates and results by
ethnicity and make the interpretation of performance trends by ethnicity problematic. Since 1996, varying proportions of examinees have not reported ethnicity information to the College Board (Figure 1). In 1996, a relatively small percentage (3.6\%) of Texas public school SAT examinees did not provide information about their ethnicities. In 2003, the non-response rate was 20.2 percent. In 2004 the percentage dropped considerably to 13.0 percent, a one year change of 7.2 percentage points. In 2005 the percentage dropped to a 7 year low of 6.3 percentage points. In contrast to examinee reporting of ethnicity on the SAT, the percentage of ACT examinees not reporting ethnicity has held steady at around 4 or 5 percent since 1998 .

Figure 1
Ethnicity Not Reported, SAT Examinees, Texas Public Schools, Class of 1996 Through Class of 2005

Source. College Board and Texas Education Agency.

Ethnicity information is missing because examinees either do not respond to SAT Questionnaires or SPSs when they register, or they respond to SAT Questionnaires or SPSs but do not answer the ethnicity question. The decrease in examinee non-reporting of ethnicity that occurred in 2004 and 2005 may be due in part to a change in the College Board's online registration policy. Students registering online must complete the demographic portion of the questionnaire, or the web page will not allow them to complete their registrations. Students who register by mail are not required to provide demographic information to complete their registrations.

When the percentage of non-respondents is relatively small, the effect on the accuracy of performance results by ethnicity is negligible. As the percentage of non-respondents increases, the likelihood that performance results by ethnicity are accurate decreases. The proportion of students
who do provide ethnicity information may become less representative, and may provide a less reliable estimate of true results. Increasing non-response rates can be especially problematic for reporting trends in the participation rates and scores of groups such as Native Americans whose numbers of graduating students are very small. If the demographic makeup of the non-response group is very similar to that of the group for whom information is available, then the effect on the accuracy of performance results by ethnicity may be negligible.

The fluctuation in non-response rates over time makes the interpretation of SAT participation and performance trends by ethnicity over the past six or seven years problematic. As the percentage of students not providing ethnicity information increases, the reported participation rates of one or more ethnic groups can be expected to decrease. A general decrease in the participation rates of all ethnic groups occurred from 1996 to 2003, as the rate of non-responding steadily increased (Figure 1). The effect of this can be seen when, at the same time the reported participation rates for all ethnic groups decreases, the participation rate for the entire student population increases. Conversely, as occurred in 2004, the participation rate for each ethnic group can increase, while the statewide participation rate decreases. One factor in the sudden increase in participation rates for ethnic groups in 2004 and 2005 was the sharp decrease in the rate of non-responding in those years. Although there is no clear, consistent effect of fluctuating participation rates on performance trends for each ethnic group, mean SAT math and verbal scores for examinees not providing ethnicity information decreased considerably in 2005 while mean scores increased considerably for all ethnic groups.

## Reporting of Graduation Year

The percentage of graduates who participate in SAT, ACT, or both examinations is calculated using the number of examinees obtained from the testing companies and the number of graduates obtained from PEIMS. As mentioned previously, the testing agencies use student-reported information, including expected year of graduation, to determine whether examinees graduated in the reporting year. In PEIMS, the actual years of graduation are reported by districts after students have graduated. The difference in reporting methods could result in slightly imprecise participation rates since examinees who are reported by the testing companies to have graduated in any given year may not have actually done so.

## Interpretation of Results

## The Effect of Group Size

It may be useful to compare mean scores within a group over time. The reliability of mean score changes over time is dependent on the size of the group. When the group is small, reliability is reduced and caution should be used when interpreting year to year change. In general, smaller groups require a larger change in scores for the change to be statistically significant; larger groups require a smaller change to attain the same level of statistical significance. For example, the increase from a mean Verbal SAT score of 600 to a mean score of 605 in a group with 100 examinees is less likely to
be statistically significant than the same change in a group with 10,000 examinees. It may also be useful to compare mean scores across groups. Across group comparisons are also dependent on the size of the groups. When groups differ substantially in size, comparisons of score changes between them can be misleading and generally are not appropriate.

## The Effect of Participation Rate

Because both the SAT and ACT are voluntary, a self-selected portion of the high school population takes either test. When a subset of a population takes an examination, the rate of participation plays an important part in the interpretation of average examination scores. Specifically, the average score of a population is dependent on the percentage of its members who actually take the test. For instance, a 90 percent participation rate would generally yield an average score that is more representative of the population than a 10 percent participation rate. The dependency affects the kinds of group comparisons that can be made. In groups with low participation rates, it is likely that only the most academically able, the most motivated, and the best prepared students take the test (College Board, 2002a). Consequently, low participation rates generally result in inflated estimates of population mean scores. Assuming the average ability level of each population is the same, the mean score estimate of a population with a very low participation rate will usually be higher than the mean score estimate of a population with a high participation rate.

An illustration of the inverse relationship between participation rate and mean score estimate is provided by state SAT mathematics participation and performance data in the United States in 2004 (Figure 2). As the participation rate increases, the mean score estimate generally decreases. In Figure 2, the relationship between participation and performance begins to stabilize between 50 and 60 percent participation. In a population with a moderate to high participation rate, a relatively unbiased estimate of the population mean score is more likely to be obtained than in a population with a low participation rate. Participation rates directly affect the validity of comparisons among states, districts, campuses, and various student groups. Generally, comparisons of average SAT or ACT scores are most informative for groups with similar participation rates.

## Participation Rates Over Time

SAT and ACT participation rates can be affected by factors such as state policy influencing graduation rates, availability of test fee waivers, availability of financial aid for higher education, and state mandating of participation in one or the other examination. In 2005, for the first time in nearly a decade, the number of students graduating from Texas public schools decreased. The number of graduates is used to calculate SAT and ACT participation rates: the number of graduates is the denominator, and the number of examinees is the numerator. Because the decrease in actual graduates did not result from a decrease in enrollment, and because the number of SAT and ACT examinees increased, the examination participation rates increased for all student groups in 2005. Specifically, while the number of graduates decreased from 219,211 in 2004 to 213,765 in 2005, the number of

Figure 2
Relationship Between SAT Mathematics Participation and Performance for States, Class of 2005

Source. College Board (2005a)

SAT and/or ACT examinees increased from 135,646 in 2004 to 140,003 in 2005. These shifts should be taken into account when comparing participation rates over time. See the section, Reporting of Graduation Year, on page 13, for more information on the calculation of participation rates.

## Results for Texas Public Schools

## Academic Excellence Indicator System Measures

SAT

ACT

## Academic Excellence Indicator System Measures

## Participation Rates

In 1993, the Texas Legislature mandated the creation of the Texas public school accountability system to evaluate districts and campuses. "Base" indicators in the Academic Excellence Indicator System (AEIS) are used to determine accountability ratings. College admissions test results are "additional" indicators in the AEIS, which are used to acknowledge districts and campuses for high performance on measures other than those used for accountability ratings. The AEIS measures regarding college admissions testing are: (a) the percentage of graduating seniors tested on either the SAT or ACT; and (b) the percentage of examinees meeting the criterion established by the Commissioner of Education on either the SAT (a combined score of at least 1110 on the SAT Verbal and Mathematics) or the ACT (a score of at least 24 on the ACT Composite). The performance of an examinee who takes both tests and meets the criterion on both is counted only once in AEIS achievement indicators.

In the graduating class of 2005, a total of 140,003 public high school graduates took either the SAT, ACT, or both (Table 1); this was up from 135,646 examinees from the 2004 graduating class. The overall participation rate was 65.5 percent, 3.6 percentage points greater than the previous year. Asian/Pacific Islanders had the highest participation rate at 86.9 percent, followed by Whites (70.7\%) and African Americans ( $66.2 \%$ ). Hispanics had the lowest participation rate, with 50.7 percent of graduates participating in SAT or ACT testing. From 2004 to 2005, the participation rates of all groups increased, from a low of 3.5 percentage points for White students to a high of 6.6 percentage points for Asian/Pacific Islanders. A larger percentage of female graduates ( $68.1 \%$ ) than male graduates ( $62.6 \%$ ) were tested.

Table 1

From 1991 through 2005, the relative participation rates of the three largest ethnic groups were consistent: White students had the highest rates, followed by African American, then Hispanic students (Table 2 on page 19 and Figure 3 on page 20). Across the same period, the participation rate for female students was about 4 to 5 percentage points higher than the participation rate for male students (Figure 4 on page 21).

## Percentage Meeting Criterion on Either the SAT or ACT

Of the students in the 2005 graduating class who took college entrance examinations, 27.4 percent achieved the criterion score on either the SAT or ACT for Gold Performance Acknowledgement in the AEIS (Table 3). This represents an increase of 0.4 percentage points from the previous year. There were large ethnic group differences in the percentages of examinees who met the criterion score. Asian/Pacific Islander examinees had the largest proportion of students achieving the criterion score ( $48.0 \%$ ), followed by White examinees ( $38.7 \%$ ). The smallest percentages of examinees achieving the criterion score were found among Hispanics (11.0\%) and African Americans ( $8.1 \%$ ). A larger proportion of male than female examinees ( $30.3 \%$ and $24.9 \%$, respectively) met the criterion.

Source. ACT, Inc.; College Board; and Texas Education Agency.
Note. The criterion score for SAT and ACT performance was established by the Commissioner of Education in 1996.

From 1994 through 2005, there was a slight increase in the percentage of all examinee groups who met the criterion, particularly among White and Asian/Pacific Islander examinees (Figure 5 on page 24). From 1991 through 2005, the relative performance rates for the three largest ethnic groups of students scoring at or above criterion were consistent: White students had the highest rate, followed by Hispanic then African American students (Table 4). In this time period, Asian/Pacific Islander examinees outperformed all other ethnic groups; White examinees outperformed Hispanic and African American examinees; and males outperformed females (Figure 6 on page 25).

## SAT

## SAT Participation

The SAT is most commonly taken by high school students in their junior and/or senior years. Because the test is not mandatory, only a self-selected portion of the population of high school students takes the test each year, that is, those students who intend to pursue college studies. Fifty-three percent of the 2005 graduating class in Texas public schools participated in SAT testing (Table 5). Of the students for whom ethnicity was reported, 82.8 percent of Asian/Pacific Islander graduates, 53.1 percent of White graduates, 50.5 percent of African American graduates, and 36.6 percent of Hispanic graduates participated in SAT testing. The participation rate was 54.7 percent for female graduates and 51.1 percent for male graduates.

Source. College Board and Texas Education Agency.
abecause of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System database, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent.

The overall rate of participation in SAT testing remained at about 50 percent from 1996 to 2004 and increased to 53 percent in 2005 (Table 6). Similarly, the participation rates for each ethnic group held steady from 1996 through 2004 but increased considerably from 2004 to 2005. One or more of these increases may be a result of the increase in the number and proportion of students reporting ethnicity information. Of students participating in the SAT examination, 6.3 percent did not provide ethnicity information in 2005 (Table 7 on page 28). This is a decrease in non-responding of 6.7 percentage points from 13.0 percent in 2004. The smaller the percentage of students with unreported ethnicity information, the greater the accuracy of the actual rates of participation for the

aBecause of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System database, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent.
reported ethnic groups. In addition to the increase in ethnicity reporting, the decrease in the number of graduates for the class of 2005 affected participation rates. Nevertheless, the degree to which each ethnic group participation rate was affected by the overall increase in ethnicity reporting or the decrease in the number of graduates is unknown.

Although the participation rates for each ethnic group increased in 2005, the relative ranking of the ethnic groups stayed the same. From 1996 to 2005, participation was consistently highest for Asian/Pacific Islanders and consistently lowest for Hispanics.

## Mean SAT Scores

In 2005, the highest SAT average Verbal and Mathematics combined scores were obtained by Asian/Pacific Islander examinees, with an average of 1095, and White examinees, with an average of 1059 (Table 8 on page 30). Asian/Pacific Islanders scored considerably higher on the Mathematics section than the other ethnic groups, and Whites scored higher on the Verbal section than the other ethnic groups. The average Verbal, Mathematics, and combined scores of males were higher than those of females. Males had an average combined score of 1012, whereas females had an average score of 974 .

In the examination of SAT performance trends, the graduating class of 1999 was used as a comparison group because the ethnicity non-response rate in 1999 was similar to the rate in 2005. The average SAT Verbal and Mathematics combined score for 2005 graduates was 991 , two points higher than the average score of 989 obtained by 1999 graduates (Table 8 on page 30 and Figure 7 on page 31). The average Verbal score for 2005 graduates was 490 , two points lower than the mean score of 492 in 1999; the average Mathematics score for 2005 graduates was 502 , four points higher than the mean score of 498 in 1999. From 1999 to 2005, differences between ethnic groups increased, because mean scores of Asian/Pacific Islanders and Whites increased more rapidly than those of African Americans and Hispanics. The largest increase was for Asian/Pacific Islander examinees, whose mean score increased by 27 points from 1068 in 1999 to 1095 in 2005. The mean score for White examinees increased by 15 points from 1044 in 1999 to 1059 in 2005. The mean score for African American examinees increased by 7 points from 847 in 1999 to 854 in 2005, and the mean score for Hispanic examinees remained stable at 902 .

From 1999 to 2005, mean combined scores were consistently highest for Asian/Pacific Islander examinees, followed by White, Hispanic, and African American examinees. Mean verbal scores were consistently highest for White students, followed by Asian/Pacific Islander, Hispanic, and African American students. Asian/Pacific Islander students scored highest in Mathematics, followed by White, Hispanic, and African American students. From the class of 1999 to the class of 2005, mean Verbal and Mathematics scores remained stable for males and females, with males consistently obtaining higher scores than females on both subjects, particularly Mathematics.

## Graduate and SAT Examinee Population

For 2005 graduates who reported their ethnicity, disparities were evident between the proportions of ethnic groups in the SAT examinee population and their proportions of the graduate population (Figure 8). For all ethnic groups except Hispanics, the proportions of SAT examinees were greater than their proportions of graduates. For example, Asian/Pacific Islanders made up 6.5 percent of examinees, while only 3.8 percent of graduates were Asian/Pacific Islander. On the other hand, Hispanics made up only 26.7 percent of examinees, while 35.2 percent of graduates were Hispanic. Females made up a slightly greater proportion of examinees than their proportion of graduates, and males made up a slightly smaller proportion of examinees than their proportion of graduates.

Figure 8
Graduating Seniors and SAT Examinees, by Ethnicity and Gender, Texas Public Schools, Class of 2005

Source. College Board and Texas Education Agency.
Note: The denominator includes only graduates that reported their ethnicity.

## ACT

## ACT Participation

As with the SAT, the ACT is taken by a self-selected portion of high school students, namely, those who intend to pursue college studies. For the 2005 graduating class in Texas public schools, 29.8 percent of students took the ACT (Table 9). Of the students for whom ethnicity was reported, 31.2 percent of African American graduates, 30.3 percent of White graduates, 23.0 percent of Asian/Pacific Islander graduates, and 21.8 percent of Hispanic graduates participated in ACT testing. The participation rate for female graduates was 32.7 percent, and the participation rate for male graduates was 26.0 percent.

Table 9
ACT Participation and Performance, by Ethnicity and Gender, Texas Public Schools, Class of 2005

| Group | Graduates |  |  | Mean scores |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Participation |  |  |  |  |  |  |
|  |  | Tested | rate (\%) | English | Mathematics | Reading | Science | Composite |

| State | 213,765 | 63,615 | 29.8 | 19.1 | 20.2 | 20.2 | 20.1 | 20.0 |

Source. ACT, Inc. and Texas Education Agency

From 1996 to 2005, the rates of participation in ACT testing overall remained at about 30 percent (Table 10 on page 34). The rates of participation in ACT testing decreased for most student groups between the classes of 1996 and 2005. A notable exception was for African American graduates, whose ACT participation increased from 27.8 percent in 1996 to 31.2 percent in 2005.

In the class of 2005, 5.3 percent of students participating in the ACT examination did not provide ethnicity information (Table 11 on page 34). This is a decrease of one-tenth of a percentage point from the previous year. Unlike the SAT, where non-response rates to ethnicity information have fluctuated over time, non-response rates to ethnicity information in the ACT have remained consistently low.

Table 10
ACT Participation Rates (\%), by Ethnicity and Gender, Texas Public Schools, Class of 1996 Through Class of 2005

| Class | Ethnicity |  |  |  |  | Gender |  | State |

## Mean ACT Scores

The average ACT Composite score for the class of 2005 was 20.0, one-tenth of a point lower than the average score of 20.1 for the class of 2004 (Figure 9 on page 35 and Table 12 on page 36). The highest average ACT Composite scores in 2005 were obtained by Asian/Pacific Islander examinees, with an average of 22.4, and White examinees, with an average of 21.8. Asian/Pacific Islander examinees scored considerably higher on the Mathematics section than the other groups and somewhat higher than the other groups in English and Science. White examinees scored higher on the Reading section than the other groups. Male and female examinees obtained the same average ACT Composite score of 20.0.

Figure 9
ACT Composite Performance, by Ethnicity, Texas Public Schools, Class of 2004 and Class of 2005

Source. Texas Education Agency (1997, 1998, 1999, 2000, 2001, 2003, 2004a, 2004b, 2006c); ACT, Inc.; and Texas Education Agency.

From the class of 1996 through the class of 2005, there was little variability in mean ACT composite scores: mean scores ranged from 19.9 to 20.3 (Table 12). Average scores statewide in the four ACT sections ranged from a low of 19.1 to a high of 20.5. During this time period, average ACT Composite scores were consistently highest for Asian/Pacific Islander and White examinees. Scores were generally stable within each ethnic group across years. Scores were also relatively consistent for males and females. Males had higher average scores than females on Mathematics and Science each year, and females had higher average scores than males on English and Reading each year.

Source. Texas Education Agency (1997, 1998, 1999, 2000, 2001, 2003, 2004a, 2004b, 2006c); ACT, Inc.; and Texas Education Agency.

## Graduate and ACT Examinee Population

For 2005 graduates who reported their ethnicity, the proportions of African Americans and Asian/Pacific Islanders among ACT examinees were similar to their proportions of graduates: 14.7 percent of examinees and 12.8 percent of graduates were African American, and 3.2 percent of examinees and 3.8 percent of graduates were Asian/Pacific Islander (Figure 10). Among Whites, the percentage of examinees was greater than the percentage of graduates. Whites made up 53.3 percent of ACT examinees but only 47.9 percent of graduates. On the other hand, Hispanics made up only 28.2 percent of examinees, whereas they made up 35.2 percent of all graduates. The proportion of female examinees ( $58.0 \%$ ) was greater than the proportion of female graduates ( $52.3 \%$ ). Conversely, the proportion of male graduates $(47.7 \%)$ was greater than the proportion of male examinees ( $42.0 \%$ ).

Note: The denominator includes only graduates who reported their ethnicity.

# Results for Texas and the United States 

Texas and the United States: SAT

Texas and the United States: ACT

Texas and Other States: SAT and ACT

## Texas and the United States: SAT

## SAT Participation

The number of SAT examinees among graduating seniors in public and non-public Texas schools combined steadily increased from the class of 1996 to the class of 2005 (Table 13). The number of examinees in Texas increased from 127,723 in 2004 to 133,115 in 2005; this corresponded to an increase in participation rate from 52 percent to 54 percent. The number of national examinees increased from 1,419,007 in 2004 to $1,475,623$ in 2005; this corresponded to an increase in participation rate from 48 percent to 49 percent.

Table 13
SAT Participation, Texas and the United States, Class of 1996 Through Class of 2005

|  | Examinees |  |  | Participation rate (\%) |  |
| :--- | ---: | ---: | ---: | ---: | :---: |
| Class | Texas | U.S. | Texas | U.S. |  |
| 1996 | 89,329 | $1,084,725$ | 48 | 41 |  |
| 1997 | 94,034 | $1,127,021$ | 48 | 42 |  |
| 1998 | 100,417 | $1,172,779$ | 51 | 43 |  |
| 1999 | 104,144 | $1,220,130$ | 50 | 43 |  |
| 2000 | 108,919 | $1,260,278$ | 52 | 44 |  |
|  |  |  |  | 4 |  |
| 2001 | 111,277 | $1,276,320$ | 53 | 46 |  |
| 2002 | 116,457 | $1,327,831$ | 55 | 46 |  |
| 2003 | 124,571 | $1,406,324$ | 57 | 48 |  |
| 2004 | 127,723 | $1,419,007$ | 52 | 48 |  |
| 2005 | 133,115 | $1,475,623$ | 54 | 49 |  |

Source. College Board (1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b, 2002b, 2002c, 2003b, 2003c, 2004a, 2004b, 2005a, 2005b).
Note. Rates that involve both public and non-public schools were obtained from summary reports released annually by the College Board. In College Board reports, the rates are rounded to the nearest whole number.

## Mean SAT Scores

For the classes of 1996 through 2005, the national mean SAT scores were generally higher than the Texas mean scores for all ethnic and gender groups, with one exception. The mean SAT Verbal scores of Asian/Pacific Islander examinees in Texas were equal to or higher than the scores of Asian/Pacific Islander examinees in the nation across all ten years (Table 14). For mean scores by ethnicity prior to 1996, see Table A-1 in the Appendix. Differences between national and Texas mean SAT combined scores for males and females generally increased from 1996 through 2005 (Table 15 on page 43).

## SAT Examinee Population

From 1996 through 2005, Texas examinees made up, on average, nearly a tenth (8.7\%) of the total national population of SAT examinees (Table 16). During this time period, the proportions of Hispanic SAT examinees in Texas were, on average, 2.6 times the proportions of Hispanic examinees in the United States as a whole. For example, in the class of 2005, Hispanics made up 23.9 percent of the test-taking population in Texas, but were only 9.8 percent of test takers nationally. The proportions of White examinees in the United States were, on average, 5.7 percentage points higher than their proportions in Texas. The proportions of African American examinees in Texas were comparable to their proportions nationally. For SAT participation trends by ethnic group prior to the class of 1996, see Table A-2 in the Appendix. The proportions of female and male examinees in Texas were similar to the national percentages (Table 17).

## Texas and the United States: ACT

## ACT Participation

The number of ACT examinees in Texas public and non-public schools combined generally increased from the class of 1996 to the class of 2005 (Table 18). Although the number of ACT examinees increased from 71,696 in 2004 to 72,294 in 2005, the participation rate remained stable at 29 percent. Similarly, although the number of national examinees also increased from 1,171,460 in 2004 to $1,186,251$ in 2005 , the national participation rate remained stable at 40 percent.

Table 18
ACT Participation, Texas and the United States, Class of 1996 Through Class of 2005

|  | Examinees |  |  | Participation rate (\%) |  |
| :--- | ---: | ---: | ---: | ---: | :---: |

Note. Percentages are based on both public and non-public school students.

## Mean ACT Scores

From the class of 1996 through the class of 2005, average scores were generally higher nationally than in Texas on all ACT sections (Table 19). Likewise, for White and Hispanic students, average scores were generally higher nationally than in Texas. The opposite was true for African American and Asian/Pacific Islander students. Among Asian/Pacific Islander and African American examinees, the majority of scores were higher in Texas than in the nation on most ACT sections during this time period. Most notably, in all ten years, the Mathematics and Science scores of African Americans in Texas exceeded or equaled those of African Americans nationally, and the Mathematics scores of Asian/Pacific Islanders in Texas were higher than those of Asian/Pacific Islanders nationally. For mean scores by ethnicity prior to the class of 1996, see Table A-3 in the Appendix. For males and females, average scores were higher nationally than in Texas on all sections (Table 20 on page 50).

Table 19

## ACT Examinee Population

From graduation year 1996 through graduation year 2005, Texas examinees made up, on average, 6.2 percent of the total national population of ACT examinees (Table 21). During this time period, the proportions of Hispanic ACT examinees in Texas were, on average, 4 times the proportions of Hispanic examinees nationally. For example, in the class of 2005, Hispanics made up 24.9 percent of the test-taking population in Texas, but were only 7.0 percent nationally. The percentages of White examinees in Texas over the ten-year period were, on average, 15.9 percentage points smaller than the percentages of White examinees nationally. The proportions of ACT examinees in Texas who were African American were similar to their proportions nationally. For ACT participation trends by ethnic group prior to 1996, see Table A-4 in the Appendix. The proportions of male and female examinees were similar in Texas and the nation across the ten-year period (Table 22).

## Texas and Other States: SAT and ACT

Participation rates for both SAT and ACT varied considerably across states (Table 23 on page 54 and Table 24 on page 57). On the SAT, Mississippi (4\%), North Dakota (4\%), Iowa (5\%), and South Dakota (5\%) had the lowest participation rates, while Connecticut ( $86 \%$ ), Massachusetts ( $86 \%$ ), New Jersey ( $86 \%$ ), and New York ( $92 \%$ ) had the highest rates. On the ACT, Delaware (4\%), New Jersey (6\%), and Rhode Island (8\%) had the lowest participation rates, while Mississippi (94\%), Colorado (100\%), and Illinois (100\%) had the highest rates. Beginning in the spring of 2001, Colorado and Illinois required all Grade 11 students to participate in ACT testing as part of their statewide assessment programs (ACT, 2003a). Participation in SAT testing was generally highest in states of the Northeast, whereas participation in ACT testing was generally highest in states of the South and Midwest.

Score differentials across states are difficult to interpret unless participation rates and student demographics are similar (see the section, Interpretation of Results, on page 13). Given two groups with very different participation rates but equal ability levels, the mean score of the group with a very low participation rate will tend to be higher than the mean score of the group with a very high participation rate, even though there is no actual difference in group ability levels. States with SAT participation rates similar to the rate in Texas (54\%) include Alaska, California, Oregon, and Washington. States with ACT participation rates similar to Texas' (29\%) include Alaska, the District of Columbia, Georgia, and Nevada.

## Compliance Statement

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
