#### Abstract

This report examines SAT and ACT participation and performance in Texas for the class of 2009. Statewide examination results for students in Texas public schools and for students in Texas public and nonpublic schools combined are presented. Data are provided by ethnicity, gender, and economic status. The report also provides descriptions and brief histories of the SAT and ACT examinations, along with a brief discussion of policy related to the examinations. In addition, the report discusses the use of SAT and ACT results in college admissions and the Academic Excellence Indicator System.

Keywords. SAT, ACT, college admissions, testing, acknowledgment, accountability, high school, scores, graduate, TASP, THEA, TSI.
Additional copies of this document may be purchased using the order form in the back of this publication. Also, the report is available in PDF format on the agency website at http://www.tea.state.tx.us/index4.aspx?id=4112. Additional information about this report may be obtained by contacting the Texas Education Agency Division of Accountability Research by phone at (512) 475-3523 or by e-mail at research@tea.state.tx.us.

For more information about the SAT, contact the College Board Southwestern Regional Office at (512) 721-1800 or http://www.collegeboard.com/. For more information about the ACT, contact ACT, Inc., Southwest Region, at (512) 345-1949 or http://www.act.org/.

## Highlights

## Texas Public Schools

Texas and the United States

## Texas Public Schools

## Academic Excellence Indicator System Measures

## Participation

- A total of 146,648 Texas public high school graduates in the class of 2009 took the SAT, the ACT, or both examinations. This was down from 147,016 graduates in the class of 2008. The number of examinees in 2009 reflects a participation rate of 61.5 percent.
- Asian/Pacific Islander graduates participated in one or both of the examinations at a rate of 84.1 percent. African American graduates participated at a rate of 68.9 percent, and White graduates participated at a rate of 66.8 percent. Hispanic graduates participated at a rate of 50.6 percent.

## Performance

- Of graduates in the class of 2009 who took the SAT, the ACT, or both examinations, 26.9 percent met or exceeded the criterion scores required for Gold Performance Acknowledgment in the Academic Excellence Indicator System. This was lower than the percentage in the class of 2008 (27.2\%).
- By ethnicity, 49.5 percent of Asian/Pacific Islander examinees, 40.6 percent of White examinees, 11.8 percent of Hispanic examinees, and 7.7 percent of African American examinees scored at or above criterion on one or both of the examinations.

## SAT

## Participation

- A total of 112,485 public high school graduates in the class of 2009 took the SAT examination. The participation rate for the class of $2009(47.2 \%)$ was lower than the rate for the class of 2008 (51.6\%).
- SAT participation rates by ethnicity were 75.9 percent for Asian/Pacific Islander graduates, 51.6 percent for African American graduates, 47.9 percent for White graduates, and 36.9 percent for Hispanic graduates.

## Performance

- For SAT examinees in the class of 2009 , the average critical reading and mathematics combined score was 985 , three points lower than that for the class of 2008. The average SAT writing score in 2009 was 470.
- Across ethnic groups in 2009, Asian/Pacific Islander examinees had the highest average SAT critical reading and mathematics combined score (1105), and African American examinees had the lowest average combined score (859).

## ACT

## Participation

- A total of 73,938 Texas public high school graduates in the class of 2009 took the ACT examination. The participation rate for the class of $2009(31.0 \%)$ was higher than the rate for the class of 2008 (30.7\%).
- ACT participation rates by ethnicity were 33.3 percent for White graduates, 32.1 percent for African American graduates, 31.9 percent for Asian/Pacific Islander graduates, and 22.2 percent for Hispanic graduates.

## Performance

- For ACT examinees in the class of 2009 the average composite score was 20.5 , the same average as the class of 2008.
- Across ethnic groups in 2009, Asian/Pacific Islander examinees had the highest average ACT composite score (24.2), and African American examinees had the lowest average ACT composite score (17.2).

## Texas and the United States

## SAT

- A total of 141,733 Texas public and nonpublic high school graduates in the class of 2009 took the SAT. The state participation rate of 51 percent was higher than the rate for the class of 2008 ( $50 \%$ ). Nationally, 1,530,128 public and nonpublic high school graduates in 2009 took the SAT. The national participation rate of 46 percent was higher than the rate for the class of 2008 (45\%).
- The average SAT critical reading and mathematics combined score for Texas public and nonpublic high school examinees in the class of 2009 was 992 , down one point from 993 for the class of 2008. Nationally, the average SAT critical reading and mathematics combined score in 2009 was 1016, down one point from 1017 for the class of 2008.
- Of Texas graduates in the class of 2009 who took the SAT examination, 45.4 percent were White, 30.1 percent were Hispanic, and 13.3 percent were African American. In the U.S., by comparison, the percentage of examinees accounted for by White graduates (55.6\%) was 10.2 percentage points higher, the percentage accounted for by Hispanic graduates ( $13.5 \%$ ) was 16.6 percentage points lower, and the percentage accounted for by African American graduates ( $12.2 \%$ ) was about the same.

## ACT

- A total of 82,640 Texas public and nonpublic high school graduates in the class of 2009 took the ACT. The state participation rate of 30.0 percent was 1.0 percentage point higher than in 2008. Nationally, 1,480,469 public and nonpublic high school graduates in 2009 took the ACT. The national participation rate of 45 percent was 2.0 percentage points higher than in 2008.
- The average ACT composite score for Texas public and nonpublic high school examinees in the class of 2009 was 20.8, up from 20.7 for the class of 2008. Nationally, the average composite score in 2009 was 21.1, the same as in 2008. The average ACT mathematics score for all examinees were higher in Texas than the nation.
- Of Texas graduates in the class of 2009 who took the ACT examination, 47.4 percent were White, 27.3 percent were Hispanic, and 12.7 percent were African American. In the U.S., by comparison, the percentage of examinees accounted for by White graduates ( $63.6 \%$ ) was 16.2 percentage points higher, the percentage accounted for by Hispanic graduates ( $9.0 \%$ ) was 18.3 percentage points lower, and the percentage accounted for by African American graduates ( $13.2 \%$ ) was about the same.

# College Admissions Testing: The SAT and ACT 

General Information

Policy Related to the SAT and ACT

Use of Individual SAT and ACT Scores

## General Information

## The Examinations

SAT. The SAT Reasoning Test, also referred to as the SAT, tests students' basic knowledge of reading, writing, and mathematics "in addition to how students think, solve problems, and communicate" (College Board, 2009a, p. 1). The test consists of three sections: critical reading, mathematics, and writing (Table 1). Scores on each of the sections range from 200 to 800 . The critical reading section consists of multiple-choice sentence completion questions and multiple-choice passage-based reading questions. The sentence completion questions assess vocabulary and understanding of sentence structure. The passage-based questions assess comprehension of what is explicitly stated, as well as what is implied, in text passages and the ability to analyze and synthesize information.

The mathematics section consists of multiple-choice questions and questions that require studentproduced responses. The mathematics questions assess problem-solving skills in the areas of number and operations; algebra and functions; geometry and measurement; and data analysis, statistics, and probability.

The writing section consists of multiple-choice questions and a student-produced essay. The writing section requires students to communicate ideas clearly, improve writing through revision and editing, recognize and identify sentence-level errors, and understand grammatical elements and structures within sentences.

ACT. According to ACT, Inc., the ACT measures general educational development in four curriculum-based areas: English, mathematics, reading, and science (ACT, Inc., 2005c). The four subject tests are measures of academic development that rely largely on students' ability to apply the content knowledge and reasoning skills acquired in their coursework to high-level tasks. These tasks often require the integration of proficiencies and skills from various high school courses. Scores on each of the sections range from 1 to 36 . Examinees also receive a composite score, calculated as the average of the four section scores. There is also an optional writing section that requires examinees to write an essay, based on a prompt, by presenting a position on an issue.

The English section consists of multiple-choice questions that assess understanding of the conventions of standard written English and rhetorical skills. Specifically, the six elements assessed by this section are punctuation, grammar and usage, sentence structure, strategy, organization, and style.

The mathematics section consists of multiple-choice questions that assess skills in the areas of pre-algebra, elementary algebra, intermediate algebra, coordinate geometry, plane geometry, and trigonometry. The mathematics items are categorized according to four levels: knowledge and skills, direct application, understanding concepts, and integrating conceptual understanding.

Table 1
A Brief Comparison of the SAT and ACT Examinations

| Characteristic | ACT | SAT |
| :--- | :--- | :--- |
| Type of test | A curriculum-based test that assesses what <br> students learn in their classes; similar to an <br> achievement test | A general reasoning test that assesses how well <br> students apply what they learn in their classes |
| Test structure | English (1 section) <br> Mathematics (1 section) <br> Reading (1 section) <br> Science (1 section) <br> Includes 1 experimental section on selected <br> testing dates | Critical reading (3 sections) <br> Mathematics (3 sections) <br> Writing (3 sections) <br> Includes 1 experimental section |
| Test content | Mathematics: <br> Content knowledge and application: <br> Algebra I <br> Algebra II <br> Geometry <br> Trigonometry <br> English: | Mathematics: <br> Content knowledge and application: <br> Algebra I <br> Algebra II <br> Geometry |
|  | Punctuation <br> Grammar and usage <br> Sentence structure | Critical reading: <br> Passage-based reading: <br> Extended reasoning <br> Rhetorical skills: <br> Strategy |
|  | Organization comprehension <br> Style | Vocabulary in context |
| Sentence completions |  |  |

The reading section consists of multiple-choice questions that assess reading comprehension by requiring examinees to understand what is explicitly stated, as well as what is implied in text. Specific
skills assessed include the ability to determine main ideas, locate and interpret significant details, understand sequences of events, make comparisons, comprehend cause-effect relationships, use context to determine meaning, draw generalizations, and analyze voice and method.

The science section assesses skills required in the sciences, including interpretation, analysis, evaluation, reasoning, and problem solving. The content includes biology, chemistry, and Earth/space sciences. The science items are constructed in one of three formats: data representation, requiring the examinee to interpret information presented in graphs and tables; research summaries, requiring the examinee to interpret experimental results; and conflicting viewpoints, requiring the examinee to understand and analyze alternative viewpoints or hypotheses.

## SAT and ACT Scoring

Student performance on both the SAT and ACT is reported as a scaled score, which is a normative standard score calculated from a raw score. For the SAT, the raw score equals the number of questions answered correctly minus a fraction of the number of questions answered incorrectly. No points are deducted for unanswered questions or for wrong answers to student-produced response questions on the mathematics section (College Board, 2009a). For the ACT, the raw score equals the number of questions answered correctly (ACT, Inc., 2010e). Because the SAT and ACT may vary in difficulty from test form to test form or from year to year, the raw scores are not comparable. To allow for performance comparisons, the raw scores are converted to scaled scores. The statistical equating procedures used in the conversion ensure that any given scaled score indicates the same level of ability across test forms or testing dates.

For each scaled score there is a corresponding percentile rank, which is the percentage of test takers who score at or below that scaled score. For example, if a student's scaled score corresponds to the 90th percentile, 90 percent of the test takers received the same or lower scaled scores. Percentile ranks are a straightforward metric for comparing a student's performance with that of other test takers. Unlike raw or standard scores, however, percentile ranks cannot be combined in any meaningful way to obtain average test performance for a group or for an individual across subtests.

## Brief History

SAT. The College Board was formed in 1900 as part of an effort to develop college admissions standards and to develop uniformity in secondary school curricula (Frisch-Kowalski, 2003). The earliest College Board tests were designed to measure curricular knowledge and consisted of essay questions. The first of these tests was administered in 1901. During the 1920s, the focus of College Board college admissions testing expanded beyond assessing subject matter knowledge to include assessment of general reasoning skills. This shift was driven, in part, by the work being done in intelligence testing as a means of classifying army personnel. During the early 1920s, the College Board began investigating this line of testing for its relevance to college admissions. The resulting test was named the Scholastic Aptitude Test (SAT) and was first administered in June 1926. The first version of the SAT measured general verbal and mathematical aptitude.

In 1986, a task force met to begin discussing the first major redesign of the SAT since its inception. The following changes were introduced during the 1993-94 school year: (a) the test names were changed from Scholastic Aptitude Test to SAT I: Reasoning Test and from Achievement tests to SAT II: Subject Tests; (b) the Test of Standard Written English was removed; (c) the SAT I verbal and mathematics sections were expanded; (d) antonyms were removed from the verbal section, and longer reading passages were added to increase the focus on critical reading ability; and (e) items requiring student-produced responses were added to the mathematics section, calculators were permitted, and more emphasis was placed on the application of mathematical concepts, problem solving in real-life situations, and interpretation of data.

In March 2005, the current version of the SAT examination was introduced, with the following modifications: (a) the name of the examination was changed from SAT I: Reasoning Test to SAT Reasoning Test; (b) a writing section was added; (c) the verbal section was renamed the critical reading section, the word analogy questions were removed, and short reading passages were added; (d) the mathematics section was expanded to cover the third year of high school mathematics (Algebra II), and the quantitative comparison questions were removed. With these modifications, the testing time for the SAT increased from 3 hours to 3 hours, 45 minutes.

ACT. ACT, Inc., was founded in 1959, and the first ACT was administered in the fall of 1959. The testing program was designed to help students make better decisions about which colleges to attend and which courses of study to pursue, and to help colleges make admissions decisions about students and ensure their continued success (ACT, Inc., 2010c).

The basic structure and format of the ACT has remained the same since its inception in 1959. In 2003, the section formerly known as science reasoning was renamed science, and an optional writing section was added in February 2005 (ACT, Inc., 2010b). The testing time for the ACT is 2 hours, 55 minutes. The ACT Writing Test adds 30 minutes to the testing time.

## Development of SAT and ACT Examinations

SAT. Educators and subject matter experts use data obtained from periodic surveys of curriculum, as well as personal experience working with high school and college students, to determine the content and the types of questions to be included on the SAT examination (College Board, 2010c). The test items are written by test developers at the College Board, high school teachers, and college instructors. The items are reviewed by a test committee for content accuracy and fairness, and revisions are made, if necessary. Next, the items are pretested with students, and additional revisions are made based on analysis of the pretest data. After final revisions are made, the test is ready for administration.

ACT. To determine what curricular knowledge and skills to assess, ACT, Inc., uses three sources of information: (a) the curriculum objectives for Grades 7-12 in all states that have such objectives; (b) state-approved textbooks for Grades 7-12; and (c) the results of an ACT National Curriculum Survey in which high school and college educators are surveyed on the types of knowledge and skills that are assessed in Grades 7-12 (ACT, Inc., 2007c). These three sources of information are used to create guidelines for item content. Item and prompt writers are then selected to write test items based on these guidelines. After the initial set of items is written, all test materials are reviewed for accuracy by ACT, Inc., and panels of experts. The items are then administered to a sample of students so that the psychometric properties of the items can be determined. Items that meet ACT, Inc.'s content and psychometric specifications and that are free from item bias are placed in a final item pool from which the various test forms are constructed. The process of developing each new version of the ACT can take up to two and a half years.

## Policy Related to the SAT and ACT

## Financial Assistance

Unlike state assessments such as the Texas Assessment of Knowledge and Skills (TAKS), SAT and ACT examinations are voluntary. Depending on a number of factors, including college plans and financial hardship, students may choose to take one or both of the examinations or neither. The College Board and ACT, Inc., have implemented policies to help overcome barriers that might otherwise prevent students from taking one or both of the examinations.

Test fee waivers from the College Board and from ACT, Inc., are available to junior and senior high school students based on economic need (ACT, Inc., 2009c, College Board, 2009d). Eligibility criteria include: (a) falling below a certain level of family income; (b) receiving public assistance; (c) living in a foster home; (d) living in a federally subsidized public housing project; and (e) participating in programs for the economically disadvantaged, such as Upward Bound and other TRIO programs. Students may receive up to two fee waivers for the SAT and up to two fee waivers for the SAT Subject Tests-a total of four fee waivers. A fee waiver can cover as many as three SAT Subject Tests on one test day. Students may also receive up to two fee waivers for the ACT. In many Texas schools and districts, students who do not meet College Board or ACT, Inc., criteria for financial assistance may receive fee waivers if they meet local criteria and local funding is available.

## Accommodations for Students With Disabilities

General guidelines. Both the College Board and ACT, Inc., provide special services for students with disabilities. To qualify, students must have documented needs for testing accommodations. Students must also be receiving special accommodations for classroom tests. Texas State Board of Education rules on accommodations for classroom tests are specified in Title 19 of the Texas Administrative Code (TAC), $\S 101.29$ (2010). When reporting examination results, neither the College Board nor ACT, Inc., identifies students who take the tests under special circumstances.

SAT. Students with documented disabilities may be eligible for one or more testing accommodations offered by the College Board on the SAT (College Board, 2010b). To be considered eligible, a student must meet the following three criteria: (a) have a disability that necessitates testing accommodations; (b) have documentation on file at his or her school that supports the need for a testing accommodation; and (c) receive the requested accommodation for classroom tests at his or her school. If a student requesting an accommodation does not meet all three requirements, he or she may still be eligible for the requested accommodation after the College Board reviews the student's specific circumstances.

## Appropriations for College Preparation Examinations and College Admissions Examinations

Under Texas Education Code (TEC) §39.0261, school districts may work with The College Board and ACT, Inc., to offer norm-referenced examinations, at state cost, that can identify students' academic strengths and weaknesses as they prepare for college. Funds for the 2010-2011 fiscal biennium were appropriated for an 8th-grade norm-referenced examination during the first year of the biennium and 8th- and 10th-grade examinations during the second year.

The College Board's 8th-grade examination, ReadiStep, and its 10th-grade examination, the Preliminary SAT/National Merit Scholarship Qualifying Test (PSAT/NMSQT), assess reading, mathematics, and writing. ACT, Inc.'s 8th-grade examination, EXPLORE, and its 10th-grade examination, PLAN, assess English, reading, mathematics, and science. The College Board and ACT, Inc., will provide professional development to districts in the use of examination data to improve instruction and raise student achievement.

In addition to the 8th- and 10th-grade examinations, the Texas Education Agency (TEA) contracted with The College Board and ACT, Inc., to offer free SAT and ACT examinations in the spring and summer of 2010 to high school juniors who were enrolled in Texas public school districts and charters. The standard registration fees, $\$ 45$ for the SAT and $\$ 47$ for the ACT, were funded by TEA. The results for juniors who took a TEA-funded SAT or ACT examination in 2010 will be presented in the class of 2011 edition of this report.

Accommodations offered by the College Board can be classified into four major categories:

- presentation of testing materials (examples include Braille, large print, and signed or oral presentation of the questions);
- response format (examples include dictation to a testing scribe and computer entry of responses);
- timing or scheduling (examples include extended testing time and frequent breaks); and
- setting (examples include private testing room and special lighting or acoustics).

To request one or more accommodations, the student or a guardian must fill out the designated portions of the College Board's student eligibility form. An official at the student's school should then complete the form and send it to the College Board. After reviewing the request, the College Board sends the student or guardian an eligibility letter either identifying the approved accommodations or explaining why the request was not approved. Finally, the student should register for the SAT, indicate the approved accommodations he or she requires, and provide his or her unique, College Board-assigned eligibility identification number.

ACT. Determination of a specific diagnosis and recommendation for accommodations on the ACT must be made by a qualified professional (ACT, Inc., 2010a). Student requests for accommodations are reviewed initially by ACT, Inc., staff. If documentation is missing or inadequate, ACT will request the additional information from the student. Otherwise, the student request is submitted to a staff specialist for further review. At this level of review, the staff specialist makes one of three
decisions: (a) approve the request for final processing; (b) submit the request for further review to an expert reviewer with training in the student's specific disability; or (c) determine that documentation of a disability that would require testing accommodations is missing or insufficient.

If the request for accommodations is approved, ACT, Inc., staff contact the requested testing site to make sure the site will be able to provide the accommodations. Once an appropriate site is determined, confirmation letters are sent to the testing site and to the student, outlining the specific accommodations to be provided.

## Use of Individual SAT and ACT Scores

## College Admissions, Placement, and Awarding of Scholarships

College admissions tests are measures of academic readiness for the first year of college. SAT or ACT scores are used by a majority of colleges and universities in the college admissions selection process (Breland, Maxey, Gernand, Cumming, \& Trapani, 2002). The SAT and ACT can be used to predict success in college, although, according to the Standards for Educational and Psychological Testing, decisions about a student's educational progress, including admissions or graduation decisions, should not be based on the results of a single test, but should include other applicable information (American Educational Research Association, American Psychological Association, \& National Council on Measurement in Education, 1999, as cited in American Psychological Association, 2001). Most institutions of higher education do, in fact, include other relevant and valid information in admissions decisions, including high school grade point average, class rank, courses taken, and participation in extracurricular activities (Rigol, 2003).

In Texas, each institution of higher education establishes its own criteria for admissions (Texas Higher Education Coordinating Board, 2004). Most take into consideration some combination of college admissions test scores and school achievement records. The SAT and ACT standards vary according to the admissions policies of each institution. Some institutions allow high school records and scores on college admissions tests to compensate for each other; for example, a higher class rank may compensate for a lower SAT or ACT score. Some institutions maintain open admissions policies, under which any person with a high school diploma or its equivalent may be accepted. Still other institutions guarantee admission to students who graduate from Texas high schools in the top percentages of their classes. Texas public institutions of higher education are required by law to admit applicants who: (a) graduate in the top 10 percent of their high school classes in one of the two years prior to the academic year of application; (b) graduate from an accredited public or private high school in Texas or from a high school operated by the U. S. Department of Defense; and (c) complete the recommended or advanced high school program (for public schools) or the equivalent (for nonpublic schools), or obtain at least a 1500 on the SAT or meet the college readiness benchmarks on the ACT (Texas Education Code [TEC] §51.803, 2009). In 2009, the 81st Texas Legislature passed Senate Bill 175 , specifically allowing the University of Texas at Austin to cap the number of students admitted under the rule at 75 percent of the incoming class. See the sidebar, "University of Texas at Austin Admissions Policy Change."

In addition to their use as admissions tools by colleges and universities, the SAT and ACT are also used to place students in appropriate freshman courses and to award scholarships to students (ACT, Inc., 2005c). Morgan and Michaelides (2005) provide a summary of the various methods available for creating cutoff scores for college placement.

## University of Texas at Austin Admissions Policy Change

In 1997, the Texas Legislature approved House Bill (HB) 588, creating the top 10 percent rule, a provision that guaranteed all Texas high school students who finished in the top 10 percent of their graduating classes admission to any public university in the state (TEC §51.803, 1997). The intent of HB 588 was to promote ethnic and geographic diversity at Texas colleges and universities by establishing an admissions policy that offered admission to high-achieving students from a wide range of high schools from all regions of the state (House Research Organization, 1997).

In 2009, the 81st Texas Legislature passed Senate Bill 175, allowing UT Austin to cap the number of students admitted under the 10 percent rule at 75 percent of the entering freshman class (TEC $\S 51.803$, 2009). The rule change will take effect in the fall of 2011. UT Austin will admit one percentile rank at a time until the cap is reached, and all applicants within the same percentile rank must be offered admission. For students graduating high school in 2011, this will effectively limit automatic admissions to the top 8 percent of the class (University of Texas at Austin, 2010). No other state universities were allowed to reduce the number of students they accept under the top 10 percent rule.

## Exemption From Texas Success Initiative Testing in Texas

In 1987, the Texas Legislature established a system of testing and remediation called the Texas Academic Skills Program, or TASP (TEC §51.306, 1988). In 2003, TASP was replaced by the Texas Success Initiative (TSI) (TEC $\S 51.3062,2004$ ). Under the TSI, undergraduate students enrolling for the first time in public institutions of higher education are required to take an assessment to evaluate their readiness for freshman-level academic coursework (TEC §51.3062, 2009). The Texas Higher Education Coordinating Board has approved the following assessment instruments for use under TSI: ASSET and COMPASS, offered by ACT, Inc.; ACCUPLACER, offered by the College Board, and the Texas Higher Education Assessment (THEA), offered by National Evaluation Systems, Inc. ( 19 TAC $\S 4.56,2010$ ). Although at least one of the assessments must be taken prior to enrollment, the results cannot be used as a condition of admission to an institution (TEC $\S 51.3062,2009$ ).

If a student fails to meet TSI standards, the college or university in which he or she is enrolling is responsible for developing a personalized plan to prepare the student for freshman-level coursework (19 TAC $\S 4.58,2010$ ). The plan for academic success must:
(1) be designed on an individual basis to provide the best opportunity for each student to succeed in performing freshman-level academic coursework; (2) provide to the student a description of the appropriate developmental education considered necessary to ensure the readiness of that student to perform freshman-level academic coursework; and (3) provide to the student an appropriate measure for determining readiness to perform freshman-level academic coursework. (p. 38)

The Texas Legislature allows exemptions from TSI assessment requirements based on student performance on the SAT, the ACT, and the exit-level Texas Assessment of Knowledge
and Skills (TAKS) (19 TAC $\S 4.54,2010$; TEC $\S 51.3062,2009)$. To qualify for an exemption based on the SAT or ACT, a student must receive a specified minimum score in one of the five years prior to enrollment in a public institution of higher education. To qualify for an exemption based on the TAKS, a student must receive a specified minimum score in one of the three years prior to enrollment. An exemption from the reading and writing sections of the TSI-required assessments is granted if a student: (a) receives an ACT composite score of at least 23 and an ACT English score of at least 19; (b) receives an SAT combined score of at least 1070 and an SAT critical reading score of at least 500; or (c) receives a TAKS English language arts scale score of at least 2200 and a writing subsection score of at least 3 . An exemption from the mathematics section of the TSI-required assessments is granted if a student: (a) receives an ACT composite score of at least 23 and an ACT mathematics score of at least 19; (b) receives an SAT combined score of at least 1070 and an SAT mathematics score of at least 500 ; or (c) receives a TAKS mathematics scale score of at least 2200 .

## Gold Performance Acknowledgment in the Texas Academic Excellence Indicator System

In 1993, the Texas Legislature mandated creation of the Texas public school accountability system to evaluate school districts and campuses (TEC Chapter 35, 1994). Three base indicators in

| A Brief Comparison of College Readiness Examinations |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |

the Academic Excellence Indicator System are used to determine accountability ratings: performance on the TAKS, annual dropout rate for Grades 7-8, and Grade 9 longitudinal completion rate (TEC Chapter 35, 2009). In addition, the legislature enacted the Gold Performance Acknowledgment (GPA) system in 2001 to acknowledge districts and campuses for high levels of performance on indicators such as advanced-course completion and performance on the SAT or ACT (TEC $\S 39.0721,2001$ ). The system replaced the Additional Acknowledgments process that had been part of the accountability system since 1994.

The SAT/ACT GPA indicator has two components: the percentage of non-special education graduates tested and the percentage of examinees scoring at or above a criterion score (TEA, 2010b). For a district or campus to meet the GPA standard, at least 70 percent of non-special education graduates must have taken the SAT and/or ACT, and at least 40 percent of the examinees must have met a criterion score. The criterion for the SAT is a score of 1110 on the critical reading and mathematics sections combined, and the criterion for the ACT is a composite score of 24 . The composite score is the average of the scores on the four sections of the examination: English, mathematics, reading, and science. Standards must be met for each student group (African American, Hispanic, and White), as well as for all students combined. Further information on college admissions test indicator definitions and acknowledgment standards as they pertain to the 2009 SAT and ACT examination results can be found in the 2010 Accountability Manual.

SAT and ACT criterion scores for GPA recognition of high levels of campus and district performance are established by the commissioner of education. The scores are used for GPA acknowledgment only and are not used by colleges to evaluate students for admission. The criteria for admission into a college or university may be obtained from each individual institution.

# Reporting of SAT and ACT Results by the Texas Education Agency 

Data Sources

# Methodological Considerations <br> in Data Reporting 

Interpretation of Results

## Data Sources

## Texas Public Schools

The College Board provides the Texas Education Agency (TEA) with annual examination results and demographic information for Texas public high school SAT examinees. Similarly, ACT, Inc., provides TEA with annual examination results and demographic information for Texas public high school ACT examinees. Students may take the SAT and ACT examinations more than once, but TEA receives and reports only the results of examinees' most recent examinations. For this report, examination results for the Texas public school class of 2009 were developed through analyses of the data provided by the College Board and ACT, Inc. Historical SAT and ACT results for Texas public high schools were obtained from previous TEA annual reports (TEA, 1997, 1998, 1999, 2000, 2001, 2003, 2004a, 2004b, 2006a, 2006b, 2007, 2008, 2009). These results are presented in the chapter, "Results for Texas Public Schools," on page 23.

TEA receives scores from the testing companies based on year of graduation. Although students other than graduating seniors, primarily high school juniors, may take SAT and ACT examinations, results in this report are based only on the scores of examinees identified by the College Board and ACT, Inc., as expecting to graduate in the reporting year. When registering for SAT or ACT examinations, a student is asked to provide his or her expected year of graduation. The testing companies use information such as the student-reported expected year of graduation to determine whether to include examinees' scores in that reporting year.

SAT and ACT results for each school district and public school in Texas are presented in the companion volume to this report, College Admissions Testing of Graduating Seniors in Texas High Schools, Class of 2009: District and Campus Supplement (TEA, 2010a).

## Combined Public and Nonpublic Schools in Texas and in the United States

Results for all examinees in public and nonpublic schools combined in Texas and in the nation were obtained from summary reports released annually by the College Board (College Board, 1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b, 2002a, 2002b, 2003a, 2003b, 2004a, 2004b, 2005a, 2005b, 2006a, 2006b, 2007a, 2007b, 2008a, 2008b, 2009b, 2009c) and by ACT, Inc. (ACT, Inc., 1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b, 2002a, 2002b, 2003a, 2003b, 2004a, 2004b, 2005a, 2005b, 2006a, 2006b, 2007a, 2007b, 2008a, 2008b, 2009a, 2009b). As is the case with testing data reported by TEA, annual reports provided by the testing agencies include only the results of examinees' most recent examinations. Additionally, results in the reports are based only on the scores of examinees identified by the College Board and ACT, Inc., as expecting to graduate in the reporting year. College Board and ACT, Inc., results are presented in the chapter, "Results for Texas and the United States," on page 55.

## Methodological Considerations in Data Reporting

## Coding and Reporting of Ethnicity

The College Board uses the SAT Questionnaire, and ACT, Inc., uses the Student Profile Section (SPS) and the ACT examination answer form to obtain self-reported demographic information, such as ethnicity. The questionnaires are completed when students register for the SAT or ACT examinations. School districts report student demographic information to TEA through the Public Education Information Management System (PEIMS). The data are submitted each school year at the end of the fall semester.

Because different data collection methods are used, ethnicity information may be inconsistent across College Board, ACT, Inc., and TEA data reporting (Table 2). The College Board's SAT Questionnaire asks students to describe themselves by choosing one of eight ethnic categories. Three of the eight categories may be combined into one "Hispanic" group, leaving six categories. The ACT's SPS asks students to choose one of nine phrases to best describe their ethnic backgrounds. Two of the nine phrases may be combined into one "Hispanic" group, leaving eight categories. For the class of 2009, TEA required that districts choose one of five ethnic categories for each student enrolled.

Table 2
Ethnic Categories in Demographic Forms Provided by the College Board, ACT, Inc., and Texas Education Agency

| College Board | ACT, Inc. | Texas Education Agency |
| :--- | :--- | :--- |
| 1. African American or Black | 1. African American/Black (non-Hispanic) | 1. American Indian or Alaskan Native |
| 2. American Indian or Alaskan Native | 2. American Indian, Alaskan Native | 2. Asian or Pacific Islander |
| 3. Asian, Asian American, or Pacific Islander | 3. Asian American, Pacific Islander | 3. Black, not of Hispanic origin |
| 4. Latin American, South American, Central | 4. Caucasian American/White (non-Hispanic) | 4. Hispanic |
| American, or other Hispanic or Latino | 5. Mexican American/Chicano/Latino | 5. White, not of Hispanic origin |
| 5. Mexican or Mexican American | 6. Puerto Rican, Cuban, other Hispanic |  |
| 6. Puerto Rican | 7. Multiracial |  |
| 7. White | 8. Other |  |
| 8. Other | 9. Prefer not to respond |  |

Differences in the ways the College Board, ACT, Inc., and TEA code and report ethnicity can lead to problems in the calculation of examination participation rates by ethnic groups. In the "Academic Excellence Indicator System Measures" section of the chapter, "Results for Texas Public Schools," on page 24, all information on ethnicity was obtained from PEIMS, so the numerator and denominator in the calculation of participation rates use ethnicity information from the same source. But in the "SAT" and "ACT" sections of the same chapter, the numerator and denominator use ethnicity information from different sources. The numbers of examinees in each ethnic group were obtained from the College Board and ACT, Inc., whereas the number of Texas public school graduates in each ethnic group was obtained from PEIMS. One consequence is that, in some cases (particularly for very small groups, such as Native Americans), the numerator may be larger than
the denominator, resulting in percentages greater than 100. In data tables where this occurs, the percentage of graduates tested appears as 100 (for example, see Table 5 on page 27). Because of the resulting interpretive difficulties, results for Native American graduates are not discussed in the text.

## Reporting of Ethnicity by Examinees

Although a majority of examinees respond to the questionnaires provided by the College Board and ACT, Inc., some do not. Additionally, examinees who do respond to the questionnaires may not respond to all questions. Fluctuating trends in self-reported ethnicity information, including variable nonresponse rates, may bias analyses of college entrance examination participation rates and results by ethnicity and make interpretation of performance trends by ethnicity problematic. Since 1996, varying proportions of examinees have not reported ethnicity information to the College Board and ACT, Inc. (Figure 1). In 1996, a relatively small percentage of Texas public school SAT examinees (3.6\%) did not provide information about their ethnicities. In 2003, the nonresponse rate reached a high of 20.2 percent. In 2004, the percentage dropped considerably to 13.0 percent, a oneyear change of 7.2 percentage points. By 2009, the percentage dropped to 2.2 percent. In contrast to the trend in ethnicity nonresponse on the SAT, the percentage of ACT examinees not reporting ethnicity reached a high of 8.5 percent in 1997, dropped to between 4.0 and 5.4 percent from 1998 to 2005 , then increased to new highs of 9.1 percent in 2006 and 10.4 percent in 2007 before dropping again in 2009 to 3.1 percent.

Figure 1
Ethnicity Not Reported, SAT and ACT Examinees, Texas Public Schools, Class of 1996 Through Class of 2009

Source. ACT, Inc.; College Board; and Texas Education Agency.

Ethnicity information is missing because examinees either do not respond to the SAT Questionnaire or the SPS when they register, or do respond but do not answer the ethnicity question. The decreases in 2004 and 2005 in the percentages of SAT examinees not reporting ethnicity may have resulted, in part, from a change in the College Board's online registration policy. Students registering online must complete the demographic portion of the questionnaire, or the Web page will not allow them to complete their registrations. Students who register by mail are not required to provide demographic information to complete their registrations.

When the percentage of nonrespondents is relatively small, the effect on the accuracy of performance results by ethnicity is negligible. As the percentage of nonrespondents increases, the likelihood that performance results by ethnicity are accurate decreases. The proportion of examinees who do provide ethnicity information may become less representative and may provide a less reliable estimate of true results. Increasing nonresponse rates can be especially problematic for reporting trends in the participation rates and scores of groups that have small numbers of students, such as Native Americans.

Fluctuation in nonresponse rates over time makes interpretation of long-term SAT participation and performance trends by ethnicity problematic. A change in nonresponse rate in one direction, either an increase or a decrease, can be expected to result in a change in reported participation rate in the opposite direction for one or more ethnic groups. Between 1996 and 2003, for example, reported SAT participation rates for all ethnic groups generally decreased as the nonresponse rate steadily increased (Figure 1 on facing page and Table 10 on page 35). Conversely, ethnic group participation rates generally increased as the nonresponse rate decreased between 2003 and 2007. It is possible, as occurred between 2002 and 2003 and subsequently between 2003 and 2004, that at the same time participation rates either increase or decrease for all ethnic groups, the statewide participation rate changes in the opposite direction (Table 9 on page 34 and Table 10 on page 35 ). There is no clear, consistent effect of fluctuating participation rates on performance trends for ethnic groups. It is noteworthy, nonetheless, that average SAT mathematics and critical reading scores for examinees not providing ethnicity information decreased considerably in 2005 while average scores increased considerably for all reported ethnic groups (Table 12 on page 37).

## Reporting of Graduation Year

The percentages of graduates who participate in the SAT, the ACT, or both examinations are calculated using the numbers of examinees reported by the testing companies and the number of graduates reported in PEIMS. The testing companies use student-reported information, including expected year of graduation, to determine whether to include examinees' scores in that reporting year. PEIMS uses the actual year of graduation reported by school districts after students have graduated. Because examinees who are reported by the testing companies to have graduated in any given year may not have actually done so, the difference in reporting methods can result in imprecise participation rates.

## Interpretation of Results

## The Effect of Group Size

It may be informative to compare a group's average scores over time, but the reliability of such comparisons is dependent on the size of the group. When the group is small, reliability is reduced and caution should be used when interpreting year-to-year change. In general, changes in the average scores of large groups, such as the White SAT examinee group in Texas, are less likely to have occurred by chance than changes in the average score of a small group, such as the Native American SAT examinee group in Texas. Between-group comparisons are also dependent on the sizes of the groups. When groups differ substantially in size, comparisons of changes in scores between them can be misleading and, generally, are not appropriate.

## The Effect of Participation Rate

Because both the SAT and ACT are voluntary, a self-selected portion of the high school population takes the tests. In situations like this, the rate of participation plays an important role in the interpretation of average scores. Specifically, the accuracy of the estimate of the average score for a population is dependent on the proportion of that population that takes the examination. For example, a 90 percent participation rate would generally yield an average score that is more representative of the population than a 10 percent participation rate. This effect of participation rate on reported average scores affects the kinds of group comparisons that can be made. Typically in groups with low participation rates, the examinees have completed academically rigorous courses and apply to the nation's most selective scholarship programs and colleges (College Board, 2010a). Consequently, low participation rates generally result in inflated average score estimates. Assuming the average ability level of each population is in reality the same, the average score estimate for a population with a very low participation rate will usually be higher than the average score estimate for a population with a high participation rate.

The inverse relationship between participation rate and average score estimate is illustrated by SAT mathematics participation and performance data in the 50 states and the District of Columbia in 2009 (Figure 2). As a state's participation rate increases, its average score estimate generally decreases. The relationship between participation and performance begins to stabilize between 40 and 60 percent participation. Generally, bias in the estimate of a population's average score is reduced when the participation rate is moderate to high. Participation rates directly affect the validity of comparisons among states, districts, campuses, and various student groups. Generally, comparisons of average SAT or ACT scores are most informative between groups with similar participation rates.

Figure 2
Relationship Between SAT Mathematics Participation and Performance for States, Class of 2009

Source. College Board (2009c).

## Participation Rates Over Time

SAT and ACT participation rates can be affected by many factors, including varying graduation rates, availability of test fee waivers, availability of financial aid for higher education, and state mandating of participation in one of the examinations. The number of graduates is used to calculate SAT and ACT participation rates: the number of graduates is the denominator, and the number of examinees is the numerator. In 2005, for the first time in nearly a decade, the number of students graduating from Texas public schools decreased (TEA, 2006c). Because the decrease in graduates did not result from a decrease in enrollment, and because the numbers of SAT and ACT examinees increased, examination participation rates increased for all student groups in 2005. Specifically, while the number of graduates decreased from 219,211 in 2004 to 213,765 in 2005, the number of SAT and/or ACT examinees increased from 135,646 in 2004 to 140,003 in 2005 (Table 4 on page 26). Similarly, the number of graduates in 2007 decreased slightly to 214,516, from 214,580 graduates in 2006, whereas the number of SAT and/or ACT examinees increased to 146,396 from 141,188 in 2006. These shifts should be taken into account when comparing participation rates over time. See the section, "Reporting of Graduation Year," on page 19, for more information on the calculation of participation rates.

# Results for Texas Public Schools 

## Academic Excellence <br> Indicator System Measures

SAT

ACT

## Academic Excellence Indicator System Measures

## Participation Rates

In 1993, the Texas Legislature mandated the creation of the Texas public school accountability system to evaluate districts and campuses. "Base" indicators in the Academic Excellence Indicator System (AEIS) are used to determine accountability ratings. "Additional" indicators in AEIS are used to acknowledge districts and campuses for high levels of performance on measures other than those used for accountability ratings. College admissions test results are used as additional indicators in AEIS. The AEIS measures regarding college admissions testing are: (a) the percentage of graduating seniors taking the SAT or ACT; and (b) the percentage of examinees meeting the criterion established by the commissioner of education on either the SAT or ACT. The criterion for the SAT is a score of 1110 on the critical reading and mathematics sections combined, and the criterion for the ACT is a composite score of 24 . The composite score is the average of the scores on the four sections of the ACT: English, mathematics, reading, and science. The performance of an examinee who takes both tests and meets the criterion on both is counted only once in AEIS achievement indicators.

In the class of 2009 , a total of 146,648 public high school graduates took the SAT, the ACT, or both examinations; this was down from 147,016 graduates in the class of 2008 (Table 3 on facing page and Table 4 on page 26). The overall participation rate was 61.5 percent, 3.5 percentage points lower than the previous year. From 2008 to 2009, participation rates decreased for all ethnic groups. Across ethnic groups in 2009, Asian/Pacific Islander graduates had the highest participation rate, at 84.1 percent, followed by African American graduates ( $68.9 \%$ ) and White graduates ( $66.8 \%$ ). Hispanic graduates had the lowest rate of participation in SAT or ACT testing, at 50.6 percent. The participation rate for economically disadvantaged graduates ( $52.0 \%$ ) was lower than the participation rate for graduates not identified as economically disadvantaged ( $63.8 \%$ ). A larger percentage of female graduates ( $63.9 \%$ ) than male graduates ( $59.0 \%$ ) was tested.

For much of the 10-year period between 1999 and 2009, the pattern of participation across ethnic groups was generally consistent: Asian/Pacific Islander graduates had the highest rates, followed by White, African American, and Hispanic graduates (Table 5 on page 27 and Figure 3 on page 28). A change to this pattern occurred in 2007 and continued in 2008 and 2009, as the participation rate for African American graduates exceeded the rate for White graduates. Participation rates for female graduates were about 4 to 6 percentage points higher than the rates for male graduates between 1999 and 2009.

## Percentage Meeting Criterion on the SAT or ACT

Of graduates in the class of 2009 who took the SAT, the ACT, or both examinations, 26.9 percent met or exceeded the criterion scores required for Gold Performance Acknowledgment in the AEIS (Table 6 on page 29). This was a decrease of 0.3 percentage points from the previous year. Compared to 2008 , the percentages of examinees who met the criterion scores in 2009 were higher for

Table 3

| Male | 123,177 | 67,976 | 59.0 | -3.5 |
| State | 115,169 | 146,648 | 61.5 | -3.5 |

Source. ACT, Inc.; College Board; and Texas Education Agency.
Note. Because ethnicity, gender, and economic information were missing for some examinees, group totals may not sum to the state total. See the section, "Methodological Considerations in Data Reporting," on page 17, for more information.
${ }^{a}$ Because of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent.

Asian/Pacific Islanders, Hispanics, and Whites, and lower for African Americans (Table 7 on page 30 and Figure 4 on page 31). There were large ethnic group differences in the percentages of examinees who met the criterion scores. Asian/Pacific Islanders had the largest percentage of examinees with scores at or above criterion (49.5\%), followed by Whites (40.6\%), Hispanics (11.8\%), and African Americans (7.7\%). The percentage of economically disadvantaged graduates scoring at or above criterion $(9.2 \%)$ was much lower than the percentage of graduates not identified as economically disadvantaged (35.5\%) (Table 6 on page 29). A larger percentage of male ( $29.8 \%$ ) than female examinees ( $24.3 \%$ ) met the criterion scores (Table 7 on page 30).

Over the 10-year period from 1999 through 2009, the pattern of performance across ethnic groups was consistent: Asian/Pacific Islanders had the largest percentage of examinees scoring at or above criterion, followed by White, Hispanic, and African American examinees (Figure 4 on page 31 and Table 7 on page 30). During this time period, male examinees consistently outperformed female examinees.

Table 4
SAT and/or ACT Participation, Texas Public Schools, Class of 1991 Through Class of 2009

aBecause of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent. ${ }^{6}$ Results are not available for Asian/Pacific Islander or Native American graduates from 1991 through 1993.

## SAT

## Data Limitations

Not all examinees provide the ethnicity information requested by the College Board. In the following analyses, participation and performance results by ethnicity are based only on examinees who reported ethnicity information.

## SAT Participation

In the class of 2009, a total of 112,485 public high school graduates took the SAT; this was a decrease from 116,685 graduates in the class of 2008 (Table 8 on facing page and Table 9 on page 34 ). The overall participation rate was 47.2 percent, 4.4 percentage points lower than the previous year. From 2008 to 2009, participation rates decreased for all ethnic groups (Table 8 on facing page and Table 10 on page 35). Across ethnic groups in 2009, Asian/Pacific Islanders had the highest SAT participation rate, at 75.9 percent, followed by African Americans (51.6\%) and Whites ( $47.9 \%$ ). Hispanics had the lowest participation rate, at 36.9 percent. The participation rate for economically disadvantaged graduates (37.1\%) was lower than the rate for graduates not identified as economically disadvantaged (51.4\%). A larger percentage of female graduates (48.8\%) than male graduates ( $45.5 \%$ ) was tested.

## Average SAT Scores

In 2009, the average SAT critical reading and mathematics combined score for examinees overall was 985 , three points lower than in 2008 (Table 11 on page 36, Table 12 on page 37, and Figure 5 on page 39). Across ethnic groups in 2009, average combined scores were highest for Asian/Pacific Islanders (1105), followed by Whites (1066), Hispanics (905), and African Americans (859). Compared to 2008, average combined scores were seven points higher for Asian/Pacific Islander examinees, four points higher for White examinees, the same for African Americans, and one point lower for Hispanics. In 2009, the average combined score for economically disadvantaged examinees (871) was lower than that for examinees not identified as economically disadvantaged (1036). Male examinees had an average combined score of 1003, and female examinees had an average score of 969 .

The average writing score of 470 for examinees overall in 2009 was six points lower than in 2008, the average critical reading score of 481 was three points lower, and the average mathematics score of 504 was one point higher (Table 12 on page 37). In 2009, Asian/Pacific Islander examinees scored higher on the mathematics and writing sections than examinees from other ethnic groups, and White examinees scored higher on the critical reading section (Table 11 on page 36). Examinees not identified as economically disadvantaged outscored those who were identified as economically disadvantaged on all sections of the examination. Male examinees had higher average scores than

aBecause of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent. ${ }^{\circ}$ Not applicable.
female examinees on the critical reading and mathematics sections of the examination but a lower average score on the writing section.

Within each ethnic group in 2009, a greater percentage of SAT examinees were female than male (Table 13 on page 40). The difference was greatest among Hispanics, with females accounting for 55.4 percent of examinees and males accounting for 44.6 percent of examinees. Average critical reading and mathematics combined scores were higher for male examinees than female examinees within all ethnic groups except African Americans. Within each group, the average mathematics score was higher for male examinees, and the average writing score was higher for female examinees. Average critical reading scores were higher for females among African American examinees but higher for males among Asian/Pacific Islander, Hispanic, and White examinees.

## Graduate Population and SAT Examinee Population

In the class of 2009, White students accounted for 43.4 percent of the SAT examinee population, Hispanic examinees accounted for 31.1 percent, African American examinees accounted for 14.1 percent, Asian/Pacific Islander examinees accounted for 6.9 percent, and examinees that indicated their ethnicity as "other" or did not provide ethnicity information accounted for 3.9 percent (Table 14 on page 41). African American, Asian/Pacific Islander, and White students accounted for larger shares of the SAT examinee population than of the graduate population (Figure 6 on page 42). For example, Asian/Pacific Islander students made up 7.1 percent of examinees but only 4.3 percent of graduates. Hispanic students, by contrast, accounted for a larger share of the graduate population $(39.7 \%)$ than of the SAT examinee population ( $32.3 \%$ ). Whereas male students made up a smaller percentage of examinees ( $46.6 \%$ ) than graduates ( $48.3 \%$ ), the opposite was true for females ( $53.4 \%$ and $51.7 \%$, respectively).

Note. Percentages of examinees are based only on examinees who reported ethnicity information. For further discussion of the effects of nonreporting of ethnicity, see the section, "Reporting of Ethnicity by Examinees," on page 18. Parts may not add to 100 percent because of rounding.

## ACT

## Data Limitations

Not all examinees provide the ethnicity information requested by ACT, Inc. In the following analyses, participation and performance results by ethnicity are based only on examinees who reported ethnicity information.

## ACT Participation

In the class of 2009, a total of 73,938 public high school graduates took the ACT; this was an increase from 69,316 graduates in the class of 2008 (Table 15 on page 44 and Table 16 on page 45). The overall participation rate was 31.0 percent, 0.3 percentage points higher than the previous year. Participation increased for all ethnic groups in 2009 (Table 15 on page 44 and Table 17 on page 46). Whites and African Americans had the highest ACT participation rates, at 33.3 percent and 32.1 percent, respectively, followed by Asian/Pacific Islanders (31.9\%). Hispanics had the lowest participation rate, at 22.2 percent. The participation rate for economically disadvantaged graduates $(26.0 \%)$ was lower than the rate for graduates not identified as economically disadvantaged ( $32.1 \%$ ). A larger percentage of female graduates (33.0\%) than male graduates (28.8\%) was tested.

## Average ACT Scores

In 2009, the average ACT composite score for examinees overall was 20.5, the same as in 2008 (Table 18 on page 47, Table 19 on page 48, and Figure 7 on page 50). Across ethnic groups in 2009, average composite scores were highest for Asian/Pacific Islanders (24.2), followed by Whites (22.6), Hispanics (18.3), and African Americans (17.2). Compared to 2008, average composite scores were one-tenth to four-tenths of a point higher for all ethnic groups except African Americans, which remained at 17.2. In 2009, the average composite score for economically disadvantaged examinees (17.6) was lower than the average composite score for examinees not identified as economically disadvantaged (21.9). Male examinees had an average composite score of 20.7, and female examinees had an average composite score of 20.4.

Average scores in English (19.5), mathematics (21.1), and reading (20.6), as well as the average composite score in 2009 (20.5) were unchanged from 2008. The average science score rose by onetenth of a point to 20.4. In 2009, 70.7 percent of ACT examinees took the optional ACT writing examination, and the average score was 19.3. Compared to 2008, the average ACT English, mathematics, reading, and science scores increased or stayed the same in 2009 for all ethnic groups with the exception of the English score for African Americans, which decreased by one-tenth of a point. Asian/Pacific Islander examinees scored higher on all sections of the ACT than examinees from other ethnic groups. On the optional writing examination, average scores ranged from a low of 16.3 for African American examinees to a high of 23.0 for Asian/Pacific Islander examinees. Examinees not identified as economically disadvantaged outscored those who were identified as

| State | 238,346 | 73,938 | 31.0 | 0.3 |

Source. ACT, Inc., and Texas Education Agency.
Note. Because ethnicity, gender, and economic information were missing for some examinees, group totals may not sum to the state total. See the section, "Methodological Considerations in Data Reporting," on page 17, for more information.
aBecause of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent. ${ }^{\text {b }}$ Not applicable.
economically disadvantaged on all sections of the examination. Female examinees had higher average scores than male examinees on the English and optional writing sections of the examination but lower average scores on the mathematics and science sections. The average reading examination score (20.6) was the same for female and male examinees.

Within each ethnic group in 2009, a greater percentage of ACT examinees were female than male (Table 20 on page 51). The difference was greatest among Hispanics, with females accounting for 57.0 percent of examinees and males accounting for 43.0 percent of examinees. Average English and writing scores were higher for females than males across ethnicities. Average mathematics scores were higher for males than females across ethnicities except African Americans, with no difference in scores. Average reading and science scores varied by gender across ethnicities.

## Graduate Population and ACT Examinee Population

In the class of 2009, White students accounted for 45.9 percent of the ACT examinee population, Hispanic examinees accounted for 28.4 percent, African American examinees accounted for 13.3 percent, and Asian/Pacific Islander examinees accounted for 4.4 percent (Table 21 on page 52).

African American, Asian/Pacific Islander, and White students accounted for larger shares of the ACT examinee population than of the graduate population (Figure 8 on page 53). For example, White students made up 49.6 percent of examinees but only 42.8 percent of graduates. Hispanic students, by contrast, accounted for a larger share of the graduate population (39.7\%) than of the ACT examinee population ( $30.7 \%$ ). Whereas female students made up a higher percentage of examinees than graduates, the opposite was true for males.

Source. ACT, Inc., and Texas Education Agency.
aBecause of discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent.

Table 18
ACT Performance, by Ethnicity, Economic Status, and Gender, Texas Public Schools, Class of 2009

| Group | Examinees | Examinees scoring 24 or higher |  | Average scores |  |  |  |  |  |

# Results for Texas and the United States 

Texas and the United States: SAT

Texas and the United States: ACT

Texas and Other States: SAT and ACT

## Texas and the United States: SAT

## SAT Participation

The number of SAT examinees among graduating seniors in Texas public and nonpublic schools combined increased from 137,024 in 2008 to 141,733 in 2009 (Table 22). The state participation rate increased from 50 percent to 51 percent. The number of examinees across the United States as a whole increased from 1,518,859 in 2008 to $1,530,128$ in 2009. The national participation rate increased from 45 percent to 46 percent.

Table 22
SAT Participation, Texas and the United States, Class of 1996 Through Class of 2009

|  | Examinees |  |  | Participation rate (\%) |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Class | Texas | U.S. |  | Texas | U.S. |
| 1996 | 89,329 | $1,084,725$ |  | 48 | 41 |

Note. Rates that involve both public and nonpublic schools were obtained from summary reports released annually by the College Board. In College Board reports, the rates are rounded to the nearest whole number.

## Average SAT Scores

In 2009, average SAT critical reading and mathematics combined scores were higher in Texas than the nation for African American and White examinees (Table 23). The average combined scores were lower for Asian/Pacific Islander and Hispanics examinees in Texas than the nation. Average critical reading scores were higher in Texas for Asian/Pacific Islander examinees. Average mathematics scores were higher in Texas for African American, Hispanic, and White examinees.

Note. Data are based on public and nonpublic school examinees.

For female and male examinees, average scores were higher across the nation than in Texas on all sections of the examination (Table 24).

## SAT Examinee Population

In 2009, Texas examinees made up 9.3 percent of the total national population of SAT examinees (Table 25 on page 61). In the class of 2009, Hispanics made up 30.1 percent of the test-taking population in Texas, but only 13.5 percent of test takers nationally. The percentage of examinees represented by White students was about 10 percentage points lower in Texas than the United States. African American students accounted for similar percentages of SAT examinees in Texas and the nation. For SAT participation trends by ethnic group prior to the class of 1996, see Table A-2 in the Appendix. Gender representation was similar in the examinee populations of Texas and the nation (Table 26 on page 62).

Note. Data are based on public and nonpublic school examinees. Parts may not add to 100 percent because of rounding and because of missing gender information.

## Texas and the United States: ACT

## ACT Participation

The number of ACT examinees among graduating seniors in Texas public and nonpublic schools combined increased from 79,050 in 2008 to 82,640 in 2009 (Table 27). The state participation rate increased from 29 percent to 30 percent. The number of examinees across the United States as a whole increased from 1,421,941 in 2008 to 1,480,469 in 2009. The national participation rate increased from 43 percent to 45 percent.

Note. Rates that involve both public and nonpublic schools were obtained from summary reports released annually by ACT, Inc. In ACT, Inc., reports, the rates are rounded to the nearest whole number.

## Average ACT Scores

In 2009, average ACT mathematics scores for all examinees were higher in Texas than the nation (Table 28 on page 64). Average ACT composite scores were higher in Texas than the nation for African American, Asian/Pacific Islander, and White examinees. The average composite score for Hispanic examinees was lower in Texas than the nation. Average scores for Asian/Pacific Islander and White examinees were higher in Texas than the nation on all sections of the ACT, and average

Note. Data are based on public and nonpublic school examinees.
scores for African American examinees in Texas were higher than, or the same as, national averages for African American examinees on all sections of the examination. Average scores for Hispanic examinees were higher in mathematics in Texas than in the nation. For male and female examinees, average scores were higher across the nation than in Texas on all sections of the examination except mathematics (Table 29).

## ACT Examinee Population

In 2009, Texas examinees made up 5.6 percent of the total national population of ACT examinees (Table 30 on page 69). In the class of 2009 , Hispanics made up 27.3 percent of the test-taking population in Texas, but only 9.0 percent of test takers nationally. The percentage of examinees accounted for by White students was 16.2 percentage points lower in Texas than the United States as a whole. African American students accounted for similar percentages of ACT examinees in Texas and the nation. For ACT participation trends by ethnic group prior to the class of 1996, see Table A-4 in the Appendix. Gender representation was similar in the examinee populations of Texas and the nation (Table 31 on page 70).

Note. Data are based on public and nonpublic school examinees. Parts may not add to 100 percent because of rounding and because of missing gender information.

## Texas and Other States: SAT and ACT

SAT and ACT participation rates varied considerably across states (Table 32 on page 72 and Table 33 on page 74). Rates of SAT participation ranged from a low of 3 percent to a high of 90 percent. Since spring of 2006, Maine has required all high school juniors to take the SAT (Maine Department of Education, 2007). Rates of ACT participation ranged from a low of 9 percent to a high of 100 percent. For the class of 2009, Colorado, Illinois, Kentucky, Michigan, and Wyoming required all high school juniors to participate in ACT testing as part of their statewide assessment programs (ACT, Inc., 2010d). Participation in SAT testing was generally highest in states of the Northeast, whereas participation in ACT testing was generally highest in states of the South and Midwest.

Score differences across states are difficult to interpret unless participation rates and student demographics are similar (see the section, "Interpretation of Results," on page 20). Given two groups with very different participation rates but comparable ability levels, the average score for the group with a very low participation rate will tend to be higher than the average score for the group with a very high participation rate, even though there is no actual difference in group ability levels. States with SAT participation rates similar to the rate in Texas (51\%) include Alaska, California, Oregon, and Washington. States with ACT participation rates similar to Texas's ( $30 \%$ ) include Alaska, Nevada, and Oregon.

*Copies of these reports and other reports produced by the Division of Accountability Research can be downloaded and printed at no cost from the Texas Education Agency website at http://www.tea.state.tx.us/index.aspx?id=3428\&menu_id=680\&menu_id2=797.

## Compliance Statement

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
