#### Abstract

This report examines SAT and ACT participation and performance in Texas for the class of 2010. Statewide examination results for students in Texas public schools and for students in Texas public and nonpublic schools combined are presented. Data are provided by race/ethnicity, gender, and economic status. The report also provides descriptions of the SAT and ACT examinations, along with a brief discussion of policy related to the examinations. In addition, the report discusses the use of SAT and ACT results in college admissions and the Academic Excellence Indicator System.

Keywords. SAT, ACT, college admissions, testing, acknowledgment, accountability, high school, scores, graduate, TASP, THEA, TSI.
Additional copies of this document may be purchased using the order form in the back of this publication. Also, the report is available in PDF format on the agency website at http://www.tea.state.tx.us/acctres/sat_act_index.html. Additional information about this report may be obtained by contacting the Texas Education Agency Division of Research and Analysis by phone at (512) 475-3523 or by e-mail at research@tea.state.tx.us.

For more information about the SAT, contact the College Board Southwestern Regional Office at (512) 721-1800 or http://www.collegeboard.com/. For more information about the ACT, contact ACT, Inc., Southwest Region, at (512) 345-1949 or http://www.act.org/.

## Highlights

## Texas Public Schools

Texas and the United States

## Texas Public Schools

## Academic Excellence Indicator System Measures

## Participation

- A total of 159,688 Texas public high school graduates in the class of 2010 took the SAT, the ACT, or both examinations, an increase of 13,040 graduates from the previous class. The overall participation rate for the class of 2010 was 62.6 percent.
- Among non-Hispanic graduates in the class of 2010, Asians had the highest participation rate, at 89.6 percent, followed by African Americans (70.2\%), multiracial students (68.9\%), Whites (68.1\%), Pacific Islanders (61.7\%), and American Indians (53.5\%). Overall, Hispanic graduates participated at a rate of 52.7 percent.

## Performance

- Of graduates in the class of 2010 who took the SAT, the ACT, or both examinations, 26.9 percent met or exceeded the criterion scores required for Gold Performance Acknowledgment in the Academic Excellence Indicator System. This was the same percentage as in the class of 2009.
- Compared to the class of 2009, percentages of graduates in the class of 2010 scoring at or above criterion on one or both of the examinations increased from the previous year for Hispanic, non-Hispanic African American, and non-Hispanic White examinees.

## SAT

## Participation

- A total of 123,154 Texas public high school graduates in the class of 2010 took the SAT examination. The participation rate for the class of 2010 (48.3\%) was higher than the rate for the class of 2009 (47.2\%).
- Among non-Hispanic graduates in the class of 2010, Asians had the highest SAT participation rate, at 81.8 percent, followed by multiracial students (56.6\%), African Americans (54.6\%), Whites (53.6\%), Pacific Islanders (50.4\%), and American Indians (42.2\%). Overall, Hispanic graduates participated at a rate of 38.4 percent.

## Performance

- For SAT examinees in the class of 2010, the average critical reading and mathematics combined score was 985 . SAT critical reading, mathematics, and combined scores were unchanged from the previous year. The average SAT writing score for the class of 2010 (469) was 1 point lower than that for the class of 2009.
- Across non-Hispanic African American, Asian, and White examinees and Hispanic examinees overall in the class of 2010, non-Hispanic Asian examinees had the highest average SAT critical reading and mathematics combined score (1115), and non-Hispanic African American examinees had the lowest average combined score (858).

## ACT

## Participation

- A total of 83,352 Texas public high school graduates in the class of 2010 took the ACT examination. The participation rate for the class of 2010 (32.7\%) was higher than the rate for the class of 2009 (31.0\%).
- Among non-Hispanic graduates in the class of 2010, Whites had the highest ACT participation rate, at 37.7 percent, followed by Asians (36.9\%), African Americans (35.8\%), multiracial students (35.1\%), Pacific Islanders (33.6\%), and American Indians (26.7\%). Overall, Hispanic graduates participated at a rate of 26.6 percent.

## Performance

- For ACT examinees in the class of 2010 , the average composite score was 20.5 , the same as that for the class of 2009.
- Across non-Hispanic African American, Asian, and White examinees and Hispanic examinees overall in the class of 2010, non-Hispanic Asian examinees had the highest average ACT composite score (24.6), and non-Hispanic African American examinees had the lowest average ACT composite score (17.2).

## Texas and the United States

## SAT

- A total of 148,102 Texas public and nonpublic high school graduates in the class of 2010 took the SAT. The state participation rate of 53 percent was higher than the rate for the class of 2009 (51\%). Nationally, 1,547,990 public and nonpublic high school graduates in 2010 took the SAT. The national participation rate of 47 percent was higher than the rate for the class of 2009 (46\%).
- The average SAT critical reading and mathematics combined score for Texas public and nonpublic high school examinees in the class of 2010 was 989, down three points from 992 for the class of 2009. Nationally, the average SAT critical reading and mathematics combined score for the class of 2010 was 1017, up one point from 1016 for the class of 2009.
- Of Texas graduates in the class of 2010 who took the SAT examination, 43.7 percent were White, 31.4 percent were Hispanic, and 13.8 percent were African American. In the U.S., by comparison, the percentage of examinees accounted for by White graduates (54.1\%) was 10.4 percentage points higher, the percentage accounted for by Hispanic graduates (14.4\%) was 17.0 percentage points lower, and the percentage accounted for by African American graduates (12.7\%) was 1.1 percentage points lower.

## ACT

- A total of 92,615 Texas public and nonpublic high school graduates in the class of 2010 took the ACT. The state participation rate of 33.0 percent was 3.0 percentage points higher than the rate for the class of 2009. Nationally, 1,568,835 public and nonpublic high school graduates in the class of 2010 took the ACT. The national participation rate of 47 percent was 2.0 percentage points higher than the rate for the class of 2009.
- The average ACT composite score for Texas public and nonpublic high school examinees in the class of 2010 was 20.8, the same as the average for the class of 2009. Nationally, the average composite score for the class of 2010 (21.0) was 0.1 points lower than the average for the class of 2009. The average ACT mathematics score for all examinees was higher in Texas than in the United States; the average science score for all examinees was the same in Texas and in the nation; and the average English and reading scores were lower in Texas than in the nation.
- Of Texas graduates in the class of 2010 who took the ACT examination, 45.1 percent were White, 29.8 percent were Hispanic, and 12.8 percent were African American. In the U.S., by comparison, the percentage of examinees accounted for by White graduates (62.4\%) was 17.3 percentage points higher, the percentage accounted for by Hispanic graduates (10.0\%) was 19.8 percentage points lower, and the percentage accounted for by African American graduates ( $13.7 \%$ ) was nearly a percentage point lower.

# College Admissions Testing: The SAT and ACT 

General Information

Policy Related to the SAT and ACT

## Use of Individual SAT and ACT Scores in Texas

## General Information

## The Examinations

SAT. According to the College Board, the SAT assesses knowledge in core subject areas, as well as ability to think, solve problems, and communicate (College Board, 2011a). The examination consists of three sections: critical reading, mathematics, and writing (Table 1). Scores on each of the sections range from 200 to 800.

The critical reading section consists of multiple-choice sentence completion questions and multiple-choice passage-based reading questions (College Board, 2011b). The sentence completion questions assess vocabulary and understanding of sentence structure. The passage-based questions assess understanding of vocabulary in context; ability to analyze and synthesize information; and ability to comprehend what is explicitly stated, as well as what is implied, in text passages.

The mathematics section consists of multiple-choice questions and questions that require student-produced responses. Both types of questions assess ability to apply mathematical concepts; solve problems; and use data literacy skills to interpret tables, charts, and graphs. Additionally, the questions assess knowledge and ability in the areas of numbers and operations; algebra and functions; geometry and measurement; and data analysis, statistics, and probability.

The writing section consists of multiple-choice questions and a student-produced essay. The multiple choice section requires students to understand grammatical elements and structures within sentences, recognize and identify sentence-level errors, improve sentences and paragraphs, recognize effective sentences, communicate ideas clearly, improve writing through revision and editing, and improve coherence of ideas within and between paragraphs. The student-produced essay requires students to develop and support a point of view on an issue presented in an excerpt using the conventions of standard written English.

ACT. According to ACT, Inc., the ACT measures educational development in four curriculum-based areas: English, mathematics, reading, and science (ACT, Inc., 2010e). The four sections of the examination are measures of academic development that rely largely on the examinee's ability to apply content knowledge and reasoning skills acquired in various high school courses. Scores on each of the sections range from 1 to 36 . Examinees also receive a composite score, calculated as the average of the four section scores. There is also an optional writing section that requires examinees to write an essay, based on a prompt, by presenting a position on an issue. Students who complete the optional writing section receive a combined English/writing score on a scale of 1 to 36 and a writing subscore on a scale of 2 to 12 . The writing score presented in this report is the combined English/writing score.

The English section consists of multiple-choice questions that assess understanding of the conventions of standard written English and rhetorical skills. Specifically, the six elements assessed

Table 1
A Brief Comparison of the SAT and ACT Examinations

| Characteristic | ACT | SAT |
| :---: | :---: | :---: |
| Type of test | The ACT is a curriculum-based, college readiness test that assesses what students learn in their classes; similar to an achievement test. | The SAT is a curriculum-based, college readiness test that assesses the academic skills and knowledge students acquire in high school and the ability to apply that knowledge. |
| Test structure | English (1 section) <br> Mathematics (1 section) <br> Reading (1 section) <br> Science (1 section) <br> Includes 1 experimental section on selected <br> testing dates <br> Writing (1 optional section) | Critical Reading (3 sections) Mathematics (3 sections) Writing (3 sections) Includes 1 experimental section |
| Test content | Mathematics <br> Multiple-choice questions covering six content areas: <br> - pre-algebra <br> - elementary algebra <br> - intermediate algebra <br> - coordinate geometry <br> - plane geometry <br> - trigonometry <br> English <br> Passage-based reading with multiple-choice questions measuring understanding of: <br> - usage/mechanics: <br> - punctuation <br> - grammar and usage <br> - sentence structure <br> - Rhetorical skills: <br> - strategy <br> - organization <br> - style | Mathematics <br> Multiple-choice and student-produced responses or grid-in questions covering four content areas: <br> - numbers and operations <br> - algebra and functions <br> - geometry and measurement <br> - data analysis, statistics, and probability <br> Critical Reading <br> Passage-based reading with multiple choicequestions measuring: <br> - extended reasoning ability <br> - literal comprehension <br> - understanding of vocabulary in context <br> Multiple choice sentence completion questions measuring: <br> - knowledge of the meaning of words <br> - ability to understand how sentence parts fit together <br> Writing |
|  | Reading <br> Passage-based reading with multiple-choice questions measuring reading comprehension as a function of referring and reasoning skills, including understanding of vocabulary in context <br> Science <br> Presents data representations, research summaries, and conflicting viewpoints with multiple choice questions measuring ability to understand, analyze, and generalize scientific information <br> Writing (optional) <br> Essay test measuring writing skills emphasized in high school English classes and in entry-level college composition courses | Multiple-choice questions measuring ability to: <br> - improve sentences and paragraphs <br> - identify sentence errors <br> Essay test measuring ability to: <br> - develop a point of view on an issue presented in an excerpt <br> - support the point of view using reasoning and examples from reading, studies, experience, or observations <br> - follow the conventions of standard written English |

Note. Information contained in this table was compiled and summarized from resources available on the ACT, Inc., and College Board websites, including the ACT Technical Manual (ACT, 2007c) and Getting Ready for the SAT (College Board, 2011b).

Table 1 (continued)
A Brief Comparison of the SAT and ACT Examinations

| Characteristic | ACT | SAT |
| :--- | :--- | :--- |
| Length | 215 items: 2 hours, 55 minutes <br> Optional writing section essay: 30 minutes | 170 items: 3 hours, 20 minutes <br> 1 essay: 25 minutes |
| Penalty for incorrect answers | No penalty | Formula scoring: subtracts $1 / 4$ point for each <br> incorrect answer, except on student-produced <br> response questions in the mathematics section |
| Scoring | The score on each of the four major sections <br> ranges from 1 to 36. Composite score is the <br> average of the four section scores. The optional <br> writing section has two scores: (1) a combined <br> English/writing scale score ranging from 1 to 36 <br> and (2) a writing subscore ranging from 2 to 12. | The score on each of the three major sections <br> ranges from 200 to 800 (in 10-point increments) . |
| Score reporting | If a student takes the test multiple times, he or she <br> can choose which scores to have sent to colleges. | If a student takes the test multiple times, he or she <br> can choose which scores to have sent to colleges. |
| Cost of exam | $\$ 33$ plus an additional $\$ 15$ for the optional writing <br> section | $\$ 47$ |

Note. Information contained in this table was compiled and summarized from resources available on the ACT, Inc., and College Board websites, including the ACT Technical Manual (ACT, 2007c) and Getting Ready for the SAT (College Board, 2011b).
by this section are punctuation, grammar and usage, sentence structure, strategy, organization, and style.

Designed to complement the English section of the test, the writing section contains prompts that (a) describe an issue relevant to high school students and (b) provide two different perspectives on the issue. Examinees are asked to write in support of one of the two perspectives or develop a response based on their own perspective. The writing section allows students the opportunity to express judgments, develop and organize ideas, and use language clearly and effectively.

The mathematics section consists of multiple-choice questions that assess knowledge and skill in the areas of pre-algebra, elementary algebra, intermediate algebra, coordinate geometry, plane geometry, and trigonometry. The mathematics items are categorized according to four levels: knowledge and skills, direct application, understanding concepts, and integrating conceptual understanding.

The reading section consists of multiple-choice questions that assess reading comprehension by requiring examinees to understand what is explicitly stated, as well as what is implied in text; and to draw conclusions, comparisons, and generalizations based on understanding of the passages presented. Specific skills assessed include the ability to determine main ideas, locate and interpret significant details, understand sequences of events, make comparisons, comprehend cause-effect relationships, use context to determine meaning, draw generalizations, and analyze voice and method.

The science section measures skills required in the sciences, including interpretation, analysis, evaluation, reasoning, and problem solving. The content includes biology, chemistry, and earth/space sciences. The science items are constructed in one of three formats: data representation, requiring the examinee to interpret information presented in graphs and tables; research summaries, requiring the
examinee to interpret experimental results; and conflicting viewpoints, requiring the examinee to understand and analyze alternative viewpoints or hypotheses.

## SAT and ACT Scoring

Student performance on both the SAT and ACT is reported as a scaled score, which is a normative standard score calculated from a raw score. For the SAT, the raw score equals the number of questions answered correctly minus a fraction of the number of questions answered incorrectly (College Board, 2011a). No points are deducted for unanswered questions or for wrong answers to student-produced response questions on the mathematics section. For the ACT, the raw score equals the number of questions answered correctly, and no points are deducted for incorrect answers (ACT, Inc., 2011c). Because the SAT and ACT may vary in difficulty from test form to test form or from year to year, the raw scores are not comparable. To allow for performance comparisons, the raw scores are converted to scaled scores. The statistical equating procedures used in the conversion ensure that any given scaled score indicates the same level of ability across test forms or testing dates.

For each scaled score there is a corresponding percentile rank, which is the percentage of test takers who score at or below that scaled score. For example, if a student's scaled score corresponds to the 90th percentile, 90 percent of the test takers received the same or lower scaled scores. Percentile ranks are a straightforward metric for comparing a student's performance with that of other test takers. Unlike raw or standard scores, however, percentile ranks cannot be combined in any meaningful way to obtain average test performance for a group or for an individual across subtests.

## Policy Related to the SAT and ACT

## Financial Assistance

Unlike state assessments such as the Texas Assessment of Knowledge and Skills (TAKS), SAT and ACT examinations are voluntary. Depending on a number of factors, including financial hardship, students may choose to take one or both of the examinations or neither. The College Board and ACT, Inc., have implemented policies to help overcome financial barriers that might otherwise prevent students from taking one or both of the examinations (ACT, Inc., 2010d, College Board, 2010e). For instance, test fee waivers from the College Board and from ACT, Inc., are available to junior and senior high school students based on economic need. In many Texas schools and districts, students who do not meet College Board or ACT, Inc., criteria for financial assistance may receive fee waivers if they meet local criteria and local funding is available.

Under the Texas College Preparation Program, state funds were used to cover the cost for any high school junior enrolled in a Texas public school district or charter to take one SAT or ACT examination in the spring or summer of 2010 or 2011 (Texas Education Code [TEC] §39.0261). Results for juniors who took state-funded SAT or ACT examinations in 2010 are incorporated in the results presented in this report.

## Accommodations for Students With Disabilities

Both the College Board and ACT, Inc., provide special services for students with disabilities. To qualify, students must have documented needs for testing accommodations (ACT, Inc., 2011a, College Board, 2011c). Students must also be receiving special accommodations for classroom tests. Texas State Board of Education rules on accommodations for classroom tests are specified in Title 19 of the Texas Administrative Code (TAC), §101.29 (2011). When reporting examination results, neither the College Board nor ACT, Inc., identifies students who take the tests under special circumstances.

## Use of Individual SAT and ACT Scores in Texas

## College Admissions

In Texas, each institution of higher education establishes its own criteria for admissions. Most take into consideration some combination of college admissions test scores and school achievement records. Admission standards involving SAT or ACT scores vary according to the admissions policies of each institution. Some institutions allow high school records and scores on college admissions tests to compensate for each other; for example, a higher class rank may compensate for a lower SAT or ACT score. Some institutions maintain open admissions policies, under which any person with a high school diploma or its equivalent may be accepted. Still other institutions guarantee admission to students who graduate from Texas high schools in the top percentages of their classes. Texas public institutions of higher education are required by law to admit applicants who: (a) graduate in the top 10 percent of their high school classes in one of the two years prior to the academic year of application; (b) graduate from an accredited public or private high school in Texas or from a high school operated by the U. S. Department of Defense; and (c) complete the recommended or advanced high school program (for public schools) or the equivalent (for nonpublic schools), or obtain at least a 1500 on the SAT or meet the college readiness benchmarks on the ACT (TEC §51.803, 2010). Beginning in 2011-12, the University of Texas at Austin is required to offer admission to top 10 percent candidates until at least 75 percent of the university's enrollment capacity designated for firsttime resident undergraduate students has been filled.

## Exemption From Texas Success Initiative Testing in Texas

In 1987, the Texas Legislature established a system of testing and remediation called the Texas Academic Skills Program, or TASP (TEC §51.306, 1988). In 2003, TASP was replaced by the Texas Success Initiative (TSI) (TEC §51.3062, 2004). Under the TSI, undergraduate students enrolling for the first time in public institutions of higher education are required to take an assessment to evaluate their readiness for freshman-level academic coursework (TEC §51.3062, 2009). The Texas Higher Education Coordinating Board has approved the following assessment instruments for use under TSI: ASSET and COMPASS, offered by ACT, Inc.; ACCUPLACER, offered by the College Board, and the Texas Higher Education Assessment (THEA), offered by National Evaluation Systems, Inc. (19 TAC §4.56, 2011). Although at least one of the assessments must be taken prior to enrollment, the results cannot be used as a condition of admission to an institution (TEC §51.3062, 2009).

If a student fails to meet TSI standards, the college or university in which he or she is enrolling is responsible for developing a personalized plan to prepare the student for freshman-level coursework (19 TAC §4.58, 2011). The plan for academic success must:
(1) be designed on an individual basis to provide the best opportunity for each student to succeed in performing freshman-level academic coursework; (2) provide to the student a description of the appropriate developmental education considered necessary to ensure the

aTexas Higher Education Assessment.
readiness of that student to perform freshman-level academic coursework; and (3) provide to the student an appropriate measure for determining readiness to perform freshman-level academic coursework. (p. 39)

The Texas Legislature allows exemptions from TSI assessment requirements based on student performance on the SAT, the ACT, and the exit-level Texas Assessment of Knowledge and Skills (TAKS) (19 TAC §4.54, 2011; TEC §51.3062, 2009). To qualify for an exemption based on the SAT or ACT, a student must receive a specified minimum score in one of the five years prior to enrollment in a public institution of higher education. To qualify for an exemption based on the TAKS, a student must receive a specified minimum score in one of the three years prior to enrollment. An exemption from the reading and writing sections of the TSI-required assessments is granted if a student: (a) receives an ACT composite score of at least 23 and an ACT English score of at least 19; (b) receives an SAT combined score of at least 1070 and an SAT critical reading score of at least 500; or (c) receives a TAKS English language arts scale score of at least 2200 and a writing subsection score of at least 3 . An exemption from the mathematics section of the TSI-required assessments is granted if a student: (a) receives an ACT composite score of at least 23 and an ACT mathematics score of at least 19; (b) receives an SAT combined score of at least 1070
and an SAT mathematics score of at least 500; or (c) receives a TAKS mathematics scale score of at least 2200 .

## Gold Performance Acknowledgment in the Texas Academic Excellence Indicator System

In 1993, the Texas Legislature mandated creation of the Texas public school accountability system to evaluate school districts and campuses (TEC Chapter 35, 1994). Through the state accountability system, base indicators in the Academic Excellence Indicator System, such as performance on the TAKS, annual dropout rate for Grades 7-8, and Grade 9 longitudinal completion rate, are used to determine accountability ratings. In addition, the legislature enacted the Gold Performance Acknowledgment (GPA) system in 2001 to acknowledge districts and campuses for high levels of performance on indicators such as advanced-course completion and performance on the SAT or ACT (TEC §39.0721, 2001).

The SAT/ACT GPA indicator has two components: the percentage of non-special education graduates tested and the percentage of examinees scoring at or above a criterion score (TEA, 2011c). For a district or campus to meet the GPA standard, at least 70 percent of non-special education graduates must have taken the SAT and/or ACT, and at least 40 percent of the examinees must have met a criterion score. The criterion for the SAT is a score of 1110 on the critical reading and mathematics sections combined, and the criterion for the ACT is a composite score of 24. The composite score is the average of the scores on the four sections of the examination: English, mathematics, reading, and science. Standards must be met for each student group (African American, Hispanic, and White), as well as for all students combined. For additional information on college admissions test indicator definitions and acknowledgment standards as they pertain to the 2010 SAT and ACT examination results, please refer to the 2011 Accountability Manual (TEA, 2011c).

SAT and ACT criterion scores for GPA recognition of high levels of campus and district performance are established by the commissioner of education. The scores are used for GPA acknowledgment only and are not used by colleges to evaluate students for admission. The criteria for admission into a college or university may be obtained from each individual institution.

# Reporting of SAT and ACT Results by the Texas Education Agency 

Data Sources<br>Definitions of Variables<br>Interpretation of Results

## Data Sources

## Texas Public Schools

The College Board provides the Texas Education Agency (TEA) with annual examination results and demographic information for Texas public high school SAT examinees. Similarly, ACT, Inc., provides TEA with annual examination results and demographic information for Texas public high school ACT examinees. Students may take the SAT and ACT examinations more than once, but TEA receives and reports only the results of examinees' most recent examinations. For this report, examination results for the Texas public school class of 2010 were developed through analyses of the data provided by the College Board and ACT, Inc. Historical SAT and ACT results for Texas public high schools were obtained from previous TEA annual reports (TEA, 2000, 2001, 2003, 2004a, 2004b, 2006a, 2006b, 2007, 2008, 2009a, 2010). These results are presented in the chapters, "Participation Results for Texas Public Schools" on page 21 and "Performance Results for Texas Public Schools," on page 33.

TEA receives scores from the testing companies based on year of graduation. Although students other than graduating seniors, primarily high school juniors, may take SAT and ACT examinations, results in this report are based only on the scores of examinees identified by the College Board and ACT, Inc., as expecting to graduate in the reporting year. When registering for SAT or ACT examinations, a student is asked to provide his or her expected year of graduation. The testing companies use information such as the student-reported expected year of graduation to determine whether to include examinees' scores in that reporting year.

In the sections of this report titled "Participation Results for Texas Public Schools" and "Performance Results for Texas Public Schools," data on student grade level, race/ethnicity, economic status, and gender, as well as other relevant district, campus, and student information, were obtained from the TEA Public Education Information Management System (PEIMS). The College Board and ACT, Inc., also collect data on race/ethnicity and gender for examinees; these data were used when they were not available from PEIMS.

The College Board uses the SAT Questionnaire, and ACT, Inc., uses the Student Profile Section (SPS) and the ACT examination answer form to obtain self-reported demographic information, such as race/ethnicity. The questionnaires are completed when students register for the SAT or ACT examinations. There are several differences in the ways the College Board, ACT, Inc., and TEA code and report race/ethnicity (see Table 2 on facing page and the definition of "race/ethnicity" in the section, "Definitions of Variables," on page 14). The College Board's SAT Questionnaire asks students to choose one of eight racial/ethnic categories, including three "Hispanic" categories and a single "Asian/Pacific Islander" category. The ACT's SPS asks students to choose one of eight racial/ethnic categories, including two "Hispanic" categories and a single "Asian/Pacific Islander" category. The SPS also allows students the option of choosing not to respond. In this report, when data on race/ethnicity provided by either of the testing companies are used in lieu of PEIMS

Table 2
Racial/Ethnic Categories in Demographic Forms Provided by the College Board and ACT, Inc.

| College Board | ACT, Inc. |
| :--- | :--- |
| 1. African American or Black | 1. African American/Black (non-Hispanic) |
| 2. American Indian or Alaskan Native | 2. American Indian, Alaskan Native |
| 3. Asian, Asian American, or Pacific Islander | 3. Asian American, Pacific Islander |
| 4. Latin American, South American, Central American, | 4. Caucasian American/White (non-Hispanic) |
| or other Hispanic or Latino | 5. Mexican American/Chicano/Latino |
| 5. Mexican or Mexican American | 6. Puerto Rican, Cuban, other Hispanic |
| 6. Puerto Rican | 7. Multiracial |
| 7. White | 8. Other |
| 8. Other | 9. Prefer not to respond |

data, examinees who described themselves using any of the "Hispanic" categories are counted as Hispanic. Examinees who described themselves as "Asian/Pacific Islander" are counted as Asian.

Sums of examinees by race/ethnicity, by economic status, or by gender may differ from one another or be slightly less than the total of all examinees. Whereas the count of all examinees reflects all examinees reported by the testing companies, counts of examinees by race/ethnicity and by gender reflect examinees who could be found in PEIMS plus examinees who could not be found in PEIMS but for whom the specified demographic data were available from the testing companies. Examinees reported by the testing companies may not be found in PEIMS because of data reporting errors. Because data on economic status are not available from the testing companies, the counts of examinees by economic status reflect only those examinees who could be found in PEIMS.

## Combined Public and Nonpublic Schools in Texas and in the United States

Results for all examinees in public and nonpublic schools combined in Texas and in the United States were obtained from summary reports released annually by the College Board (College Board, 2000a, 2000b, 2001a, 2001b, 2002a, 2002b, 2003a, 2003b, 2004a, 2004b, 2005a, 2005b, 2006a, 2006b, 2007a, 2007b, 2008a, 2008b, 2009a, 2009b, 2010c, 2010d) and by ACT, Inc. (ACT, Inc., 2000a, 2000b, 2001a, 2001b, 2002a, 2002b, 2003a, 2003b, 2004a, 2004b, 2005a, 2005b, 2006a, 2006b, 2007a, 2007b, 2008a, 2008b, 2009a, 2009b, 2010a, 2010b). As is the case with testing data reported by TEA, annual reports provided by the testing agencies include only the results of examinees' most recent examinations. Additionally, results in the reports are based only on the scores of examinees identified by the College Board and ACT, Inc., as expecting to graduate in the reporting year. College Board and ACT, Inc., results are presented in the chapter, "Results for Texas and the United States," on page 47.

## Definitions of Variables

## ACT Composite Score

The composite score is calculated as the average of the scores received on the four required sections of the ACT-English, mathematics, reading, and science-rounded to the nearest whole number. The optional writing section is not included in the composite score calculation.

## Average Score

In this report, an average score is the mean score for a given group on a given examination or examination section. As an example, the average ACT composite score for all students was calculated as follows:

$$
\frac{\text { total composite ACT scores }}{\text { number of students who took the ACT }}
$$

Average ACT scores were rounded to the first decimal place, and average SAT scores were rounded to the nearest whole number.

## Economically disadvantaged

Under Texas Education Agency (TEA) guidelines, a student is identified as economically disadvantaged if he or she is eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program.

## Graduates

A student is classified as a graduate in the year in which he or she is reported in PEIMS as having graduated from the Texas public school system. Students who graduated in 2009-10 must have done so by August 31, 2010, to be included in 2009-10 graduate counts. In this report, the number of nonspecial education graduates is used as the denominator in calculations of examination participation rates. The number of non-special education graduates is calculated as the total number of graduates minus the number of special education graduates, where a special education graduate is one who graduated under a graduation plan for students with disabilities or received special education services his or her entire senior year.

## Graduation Year

The percentages of Texas public school graduates who participate in the SAT, the ACT, or both examinations are calculated using the numbers of examinees reported by the testing companies and the number of graduates reported in PEIMS. The testing companies use student-reported information, including expected year of graduation, to determine whether to include examinees' scores in that
reporting year. PEIMS uses the actual year of graduation reported by school districts after students have graduated. Because examinees who are reported by the testing companies to have graduated in any given year may not have actually done so, the difference in reporting methods can result in imprecise participation rates.

## Participation Rate

In this report, participation rates for Texas public school graduates are presented for the SAT and ACT separately, as well as for the two examinations combined. In sections of the report that present combined results, data for an individual who took both examinations are counted only once. Participation rates are calculated as follows:

## number of examinees <br> number of non-special education graduates

Note that, although special education graduates are included in the numerator if they took either the SAT or ACT, they are not included in the denominator.

## Race/Ethnicity

Data submissions prior to 2009-10. School districts submit student demographic information to TEA through PEIMS. Prior to the 2009-10 school year, TEA required that districts submit one of five racial/ethnic categories for each student: American Indian or Alaska Native; Asian or Pacific Islander; Black or African American (not of Hispanic origin); Hispanic/Latino; or White (not of Hispanic origin).

Data submissions beginning in 2009-10. In 2009-10, TEA began collecting data on race and ethnicity in compliance with a new federal standard (TEA, 2011b). For that year only, as a transitionary measure, the data also were collected using the old standard. The new standard requires that race and ethnicity be collected separately using a specific two-part question, presented in a specific order, and that both parts of the question be answered.

Part 1. Ethnicity: Is the person Hispanic/Latino? Choose only one.

- Hispanic/Latino
- Not Hispanic/Latino

Part 2. Race: What is the person's race? Choose one or more, regardless of ethnicity.

- American Indian or Alaska Native
- Asian
- Black or African American
- Native Hawaiian or Pacific Islander
- White

The racial/ethnic categories are defined as follows. Hispanic includes students of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. American Indian or Alaska Native includes students having origins in any of the original peoples of North and South America (including Central America), and who maintain a tribal affiliation or community attachment. Asian includes students having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent. Black or African American includes students having origins in any of the black racial groups of Africa. Native Hawaiian/Other Pacific Islander includes students having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. White includes students having origins in any of the original peoples of Europe, the Middle East, or North Africa.

The new standard results in several important changes: (a) the combined racial category Asian/Pacific Islander is now separated into two categories; (b) students once identified exclusively as "Hispanic/Latino" must now report their race; (c) students may report more than one race; and (d) the definition for one of the racial categories-American Indian or Alaska Native-differs from that used in years past. Prior to 2009-10, American Indian or Alaska Native included students having origins in any of the original peoples of North America only.

Throughout the rest of this report, students classified in PEIMS as Hispanic/Latino are referred to as Hispanic; students classified as American Indian or Alaska Native are referred to as American Indian; students classified as Black or African American are referred to as African American; students classified as Native Hawaiian/Other Pacific Islander are referred to as Pacific Islander; and students classified as having two or more races are referred to as multiracial.

For purposes of reporting Texas public school SAT and ACT data, TEA combines the answers to the two-part question to create seven mutually exclusive racial/ethnic categories. A student identified as Hispanic is included only in the count for Hispanics. A student not identified as Hispanic is included in the count for only one of the following six racial categories: African American, American Indian, Asian, Pacific Islander, White, or multiracial. A student identified as having two or more races is included only in the count for multiracial students, not in the count for any single racial category.

Texas public school SAT and ACT data for 2009-10 are presented in this report using the new racial/ethnic categories. In selected tables, data are also presented for Hispanic students by race. Texas public school SAT and ACT data for 2008-09 and earlier years are presented using the old racial/ethnic categories. When reporting data by race/ethnicity for school years prior to 2009-10, TEA used the term Native American in place of the term American Indian. In this report, the term American Indian is used to present both current and historical data.

## SAT/ACT Criterion Scores

As previously discussed, the SAT/ACT GPA indicator in the state accountability system has two components: the percentage of non-special education graduates tested and the percentage of examinees scoring at or above a criterion score. To be included in calculations for the second of the two components, examinees must have received scores at or above the criterion on one or both of the examinations. The criterion for the SAT is a score of 1110 on the critical reading and mathematics sections combined, and the criterion for the ACT is a composite score of 24 . The percentage of examinees scoring at or above the criterion score on either test is calculated as:

## the number of examinees who scored at or above criterion on either or both examinations

> the number of examinees

## SAT/ACT Examinees

Although a student may take the SAT and/or ACT before senior year in high school, results are not reported to TEA by the College Board and ACT, Inc., until the year the student is expected to graduate. Consequently, Texas public school results presented in this report for a given year are based only on examinees reported by the testing companies as expected to graduate that year.

In addition to presenting Texas public school results for the SAT and ACT separately, this report presents results for the two examinations combined. In sections of the report that present combined results, data for an individual who took both examinations are counted only once.

## Interpretation of Results

## The Effect of Group Size

It may be informative to compare a group's average scores over time, but the reliability of such comparisons is dependent on the size of the group. When the group is small, reliability is reduced and caution should be used when interpreting year-to-year change. In general, changes in the average scores of large groups, such as the White SAT examinee group in Texas, are less likely to have occurred by chance than changes in the average score of a small group, such as the American Indian or Pacific Islander SAT examinee groups in Texas.

Between-group comparisons are also dependent on the sizes of the groups. When groups differ substantially in size, comparisons of changes in scores between them can be misleading and, generally, are not appropriate. Among non-Hispanic SAT and ACT examinees in Texas, the American Indian, Pacific Islander, and multiracial populations are small in number, compared to other racial/ethnic groups. Therefore, discussions of test performance results in this report for non-Hispanic students, including comparisons across racial/ethnic groups, do not include these populations. Among Hispanic SAT and ACT examinees in Texas, the African American, Asian, Pacific Islander, and multiracial populations are small in number, compared to other racial/ethnic groups. Therefore, discussions of test performance results in this report for Hispanic students, including comparisons across racial/ethnic groups, do not include these populations.

## The Effect of Participation Rate

Because both the SAT and ACT are voluntary, a self-selected portion of the high school population takes the tests. In situations like this, the rate of participation plays an important role in the interpretation of average scores. Specifically, the accuracy of the estimate of the average score for a population is dependent on the proportion of that population that takes the examination. For example, a 90 percent participation rate would generally yield an average score that is more representative of the population than a 10 percent participation rate. This effect of participation rate on reported average scores affects the kinds of group comparisons that can be made. Typically in groups with low participation rates, the examinees have completed academically rigorous courses and apply to the nation's most selective scholarship programs and colleges (College Board, 2010a). Consequently, low participation rates generally result in inflated average score estimates. Assuming the average ability level of each population is in reality the same, the average score estimate for a population with a very low participation rate will usually be higher than the average score estimate for a population with a high participation rate.

The inverse relationship between participation rate and average score estimate is illustrated by SAT mathematics participation and performance data in the 50 states and the District of Columbia in 2010 (Figure 1). As a state's participation rate increases, its average score estimate generally decreases. The relationship between participation and performance begins to stabilize

Figure 1
Relationship Between SAT Mathematics Participation and Performance for States, Class of 2010

Source. College Board (2009c).
between 40 and 60 percent participation. Generally, bias in the estimate of a population's average score is reduced when the participation rate is moderate to high. Participation rates directly affect the validity of comparisons among states, districts, campuses, and various student groups. Generally, comparisons of average SAT or ACT scores are most informative between groups with similar participation rates.

## Participation Rates Over Time

SAT and ACT participation rates can be affected by many factors, including varying graduation rates, availability of test fee waivers, availability of financial aid for higher education, and state mandating of participation in one of the examinations. As discussed previously, the number of graduates is the denominator in SAT and ACT participation rate calculations, and the number of examinees is the numerator. In 2005, for the first time in nearly a decade, the number of students graduating from Texas public schools decreased (TEA, 2006c). Because the decrease in graduates did not result from a decrease in enrollment, and because the numbers of SAT and ACT examinees increased, examination participation rates increased for all student groups in 2005. Specifically, while the number of graduates decreased from 219,211 in 2004 to 213,765 in 2005, the number of SAT and/or ACT examinees increased from 135,646 in 2004 to 140,003 in 2005 (Table 3 on page 23). Similarly, the number of graduates in 2007 decreased slightly to 214,516, from 214,580 graduates in 2006, whereas the number of SAT and/or ACT examinees increased to 146,396 from 141,188 in
2006. These shifts should be taken into account when comparing participation rates over time. See the section, "Definitions of Variables," on page 14, for more information on the calculation of participation rates.

# Participation Results for Texas Public Schools 

## Academic Excellence <br> Indicator System Measures

SAT

ACT

## Academic Excellence Indicator System Measures

- In the class of 2010, a total of 159,688 public high school graduates took the SAT, the ACT, or both examinations, an increase of 13,040 graduates from the class of 2009 (Table 3).
- The overall participation rate for the class of 2010 was 62.6 percent, 1.1 percentage points higher than the rate for the previous class.
- Among non-Hispanic graduates in the class of 2010, Asians had the highest participation rate, at 89.6 percent, followed by African Americans (70.2\%), multiracial students (68.9\%), Whites (68.1\%), Pacific Islanders (61.7\%), and American Indians (53.5\%) (Table 4).
- Overall, 52.7 percent of Hispanic graduates took the SAT, the ACT, or both examinations. Among Hispanic graduates, Asians had the highest participation rate, at 65.9 percent, and American Indians had the lowest rate, at 46.0 percent (Table 5 on page 24).
- For much of the 10 -year period between 2000 and 2010, the pattern of participation across racial/ethnic groups was generally consistent: Asian/Pacific Islander graduates had the highest rate, followed by American Indian, White, African American, and Hispanic graduates (Figure 2 on page 24). Changes to this pattern occurred in 2007 and 2008. The participation rate for African American graduates surpassed the rate for White graduates in 2007 and remained higher through 2010. The participation rate for American Indian graduates fell below the rates for African American and White graduates in 2008 and continued to decrease through 2010.
- The participation rate for graduates identified as economically disadvantaged (53.9\%) was lower than the rate for graduates not identified as economically disadvantaged (65.8\%) (Table 4).
- A larger percentage of female graduates (65.6\%) than male graduates (59.5\%) in the class of 2010 took one or both of the examinations. Compared to the previous class, the difference in participation rates between females and males was 1.2 percentage points larger (Table 4 on facing page and Table 6 on page 25).

Table 3
SAT and/or ACT Participation, Texas Public Schools, Class of 2000 Through Class of 2010

| Class | Graduates | Examinees | Participation <br> rate $(\%)$ |
| :--- | ---: | ---: | ---: |

## SAT

- In the class of 2010, a total of 123,154 public high school graduates took the SAT, an increase from 112,485 graduates in the class of 2009 (Table 7).
- The overall participation rate for the class of 2010 was 48.3 percent, 1.1 percentage points higher than the rate for the previous class.
- Among non-Hispanic graduates in the class of 2010, Asians had the highest participation rate, at 81.8 percent, and American Indians had the lowest participation rate, at 42.2 percent (Table 8).
- Overall, 38.4 percent of Hispanic graduates took the SAT. Among Hispanic graduates, Asians had the highest participation rate, at 59.4 percent, and American Indians had the lowest participation rate, at 35.9 percent (Table 9 on page 28).
- The participation rate for graduates identified as economically disadvantaged (38.6\%) was lower than the rate for graduates not identified as economically disadvantaged (54.2\%) (Table 8).
- A larger percentage of female graduates (50.6\%) than male graduates ( $45.9 \%$ ) in the class of 2010 took the SAT.
- In the class of 2010, non-Hispanic African American, Asian, White, and multiracial students accounted for larger proportions of the examinee population than the graduate population (Figure 3 on page 28). In contrast, Hispanic students in the class of 2010 accounted for a larger share of the graduate population than the examinee population.

Racial groups (African American, American Indian, Asian, Pacific Islander, White, and multiracial) do not include students of Hispanic ethnicity.

- In the class of 2010, a total of 83,352 public high school graduates took the ACT, an increase from 73,938 graduates in the class of 2009 (Table 10 on page 30).
- The overall participation rate for the class of 2010 was 32.7 percent, 1.7 percentage points higher than the rate for the previous class.
- Among non-Hispanic graduates in the class of 2010, Whites had the highest ACT participation rate, at 37.7 percent, and American Indians had the lowest rate, at 26.7 percent (Table 11 on page 30).
- Overall, 26.6 percent of Hispanic graduates took the ACT. Among Hispanic graduates, African Americans and Whites had the highest participation rates, at 27.8 percent each (Table 12 on page 31).
- The participation rate for graduates identified as economically disadvantaged graduates (28.7\%) was lower than the rate for graduates not identified as economically disadvantaged (33.7\%) (Table 11 on page 30).
- A larger percentage of female graduates (34.9\%) than male graduates (30.4\%) in the class of 2010 took the ACT.
- In the class of 2010, non-Hispanic African American, Asian, White, and multiracial students accounted for larger shares of the examinee population than the graduate population (Figure 4 on page 31). Pacific Islander students had the same representation in each population, whereas American Indian students accounted for larger shares of the graduate population than the examinee population. Hispanic students in the class of 2010 also accounted for a larger share of the graduate population than the examinee population.

## Performance Results for Texas Public Schools

## Academic Excellence <br> Indicator System Measures

SAT

ACT

## Academic Excellence Indicator System Measures

- Of the 159,688 graduates in the class of 2010 who took the SAT, the ACT, or both examinations, 26.9 percent met or exceeded the criterion scores required for Gold Performance Acknowledgment in the AEIS (Table 13 on facing page and Table 15 on page 37). The percentage was unchanged from the percentage in the previous class.
- There were large racial/ethnic group differences in the percentages of examinees in the class of 2010 who met the criterion scores. Among non-Hispanic examinees, 52.0 percent of Asians, 41.4 percent of Whites, and 8.1 percent of African Americans scored at or above criterion.
- Overall, 12.7 percent of Hispanic examinees scored at or above criterion. Among Hispanic examinees, 10.6 percent of American Indians and 13.3 percent of Whites scored at or above criterion (Table 14 on page 36).
- Over the 10-year period between 2000 and 2010, the pattern of performance across racial/ethnic groups was generally consistent: Asian/Pacific Islanders had the largest percentage of examinees scoring at or above criterion, followed by White, American Indian, Hispanic, and African American examinees (Table 15 on page 37 and Figure 5 on page 38).
- The percentage of examinees identified as economically disadvantaged who scored at or above criterion (9.5\%) was much lower than the percentage of examinees not identified as economically disadvantaged (36.4\%) (Table 13 on facing page).
- A larger percentage of male examinees (29.8\%) than female examinees (24.3\%) met or exceeded the criterion scores.

## SAT

- For the class of 2010, the average SAT critical reading and mathematics combined score for examinees overall (985) was the same as that for the previous class (Table 16 on page 40).
- Between the classes of 2009 and 2010, average scores in critical reading and mathematics stayed the same, and the average score for writing decreased by 1 point.
- Among non-Hispanic examinees in the class of 2010, average combined scores were 1115 for Asians, 1065 for Whites, and 858 for African Americans (Table 17 on page 40).
- Overall, Hispanic examinees had an average combined score of 908. Among Hispanic examinees, average combined scores were 893 for American Indians and 913 for Whites (Table 18 on page 41).
- Among non-Hispanic examinees, average scores for Asian and White examinees on all three sections of the examination were higher than the state averages (Table 17 on page 40). Average scores for African American examinees and for Hispanic examinees overall were lower than the state averages on all three sections.
- The average combined score for examinees identified as economically disadvantaged (878) was lower than that for examinees not identified as economically disadvantaged (1037). Examinees not identified as economically disadvantaged scored higher than economically disadvantaged students on all sections of the test.
- Male examinees had a higher average combined score (1004), than female examinees (968). Male examinees had higher average scores than female examinees on the critical reading and mathematics sections of the test but a lower average score on the writing section.
- Among non-Hispanic African American, Asian, and White examinees, and among Hispanic examinees overall, females scored higher than males on the writing section of the test, and males scored higher than females on the mathematics section (Table 19 on page 42). The difference between genders in performance was greatest among White examinees in mathematics, with males scoring higher than females by 33 points.

Source. College Board and Texas Education Agency.
Note. Parts may not add to 100 percent because of rounding. Racial groups (African American, American Indian, Asian, Pacific Islander, White, and multiracial) do not include students of Hispanic ethnicity.

- For the class of 2010, the average ACT composite score for examinees overall (20.5) was the same as that for the previous class (Table 20 on page 44).
- Between the classes of 2009 and 2010, average scores in mathematics and science increased, and average scores in English and reading decreased.
- Among non-Hispanic examinees in the class of 2010, average composite scores were 24.6 for Asians, 22.9 for Whites, and 17.2 for African Americans (Table 21 on page 44).
- Overall, Hispanic examinees had an average composite score of 18.2. Among Hispanic examinees, average composite scores were 17.9 for American Indians and 18.2 for Whites (Table 22 on page 45).
- Across non-Hispanic racial groups and the Hispanic group overall, Asian examinees had the highest scores on all sections of the test (Table 21 on page 44).
- The average composite score for examinees identified as economically disadvantaged (17.6) was lower than that for examinees not identified as economically disadvantaged (22.2). Examinees not identified as economically disadvantaged scored higher than economically disadvantaged students on all sections of the test.
- Male examinees had a higher average composite score (20.7) than female examinees (20.4). Female examinees had higher average scores than male examinees on the English and reading sections of the test but lower average scores on the mathematics and science sections.
- Among non-Hispanic African American, Asian, and White examinees, and among Hispanic examinees overall, males scored the same as, or higher than, females on the mathematics and science sections of the test, and females scored higher than males on the English section (Table 23 on page 46).

# Results for Texas and the United States 

Texas and the United States: SAT

Texas and the United States: ACT

Texas and Other States: SAT and ACT

## Texas and the United States: SAT

## Participation

- The number of SAT examinees among graduating seniors in Texas public and nonpublic schools combined increased from 141,733 in the class of 2009 to 148,102 in the class of 2010 (Table 24). The state participation rate increased from 51 percent to 53 percent.
- The number of examinees across the United States increased from 1,530,128 in the class of 2009 to $1,547,990$ in the class of 2010. The national participation rate increased from 46 percent to 47 percent.

## Performance

- For the class of 2010, average SAT critical reading and mathematics combined scores were higher in Texas than in the United States for African American and White examinees and lower for Asian/Pacific Islander and Hispanics examinees (Table 25 on page 50). Average critical reading scores were higher in Texas for Asian/Pacific Islander examinees, and average mathematics scores were higher in Texas for African American, Hispanic, and White examinees.
- For both female and male examinees, average scores were higher across the nation than in Texas on all sections of the test (Table 26 on page 52).

## Examinee Profile

- Texas examinees in the class of 2010 made up 9.6 percent of the national population of SAT examinees (Table 27 on page 53).
- Hispanics made up 31.4 percent of the test-taking population in Texas but only 14.4 percent of test takers nationally. The percentage of examinees represented by White students was more than 10 percentage points lower in Texas (43.7\%) than in the United States (54.1\%). African American students accounted for similar percentages of SAT examinees in Texas (13.8\%) and in the nation (12.7\%).
- Gender representation was similar in the examinee populations of Texas and the nation (Table 28 on page 54).

Note. Data are based on public and nonpublic school examinees. Parts may not add to 100 percent because of rounding and because of missing gender information.

## Texas and the United States: ACT

## Participation

- The number of ACT examinees among graduating seniors in Texas public and nonpublic schools combined increased from 82,640 in the class of 2009 to 92,615 in the class of 2010 (Table 29 on page 56). The state participation rate increased from 30 percent to 33 percent.
- The number of examinees across the United States increased from 1,480,469 in the class of 2009 to $1,568,835$ in the class of 2010. The national participation rate increased from 45 percent to 47 percent.

## Performance

- Overall, average ACT mathematics scores for the class of 2010 were higher in Texas than in the United States (Table 30 on page 57).
- Average ACT composite scores for the class of 2010 were higher in Texas than in the United States for African American, Asian/Pacific Islander, and White examinees. Compared to Hispanic examinees across the United States, Hispanic examinees in Texas had a lower average composite score but higher average mathematics and science scores. Average scores for African American, Asian/Pacific Islander, and White examinees were higher in Texas than in the nation on all sections of the test.
- Compared to their counterparts across the United States as a whole, average scores for female examinees in Texas were higher in mathematics and lower in English, reading, and science (Table 31 on page 59). Average scores for male examinees in Texas were higher in mathematics, the same in science, and lower in English and reading.

## Examinee Profile

- Texas examinees in the class of 2010 made up 5.9 percent of the national population of ACT examinees (Table 32 on page 61).
- Hispanics made up 29.8 percent of the test-taking population in Texas but only 10.0 percent of test takers nationally. The percentage of examinees accounted for by White students was 17.3 percentage points lower in Texas (45.1\%) than in the United States (62.4\%). African American students accounted for similar percentages of ACT examinees in Texas (12.8\%) and in the nation (13.7\%).
- Gender representation was similar in the examinee populations of Texas and the nation (Table 33 on page 61).

Table 29
ACT Participation, Texas and the United States, Class of 2000 Through Class of 2010

|  | Examinees |  |  | Participation rate (\%) |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Class | Texas | U.S. |  | Texas | U.S. |

Note. Data are based on public and nonpublic school examinees. Parts may not add to 100 percent because of rounding and because of missing gender information.

## Texas and Other States: SAT and ACT

## Participation

- SAT and ACT participation rates varied considerably across states (Table 34 on facing page and Table 35 on page 65). Rates of SAT participation ranged from a low of 3 percent to a high of 92 percent. Rates of ACT participation ranged from 10 percent to 100 percent. Since spring of 2006, Maine has required all high school juniors to take the SAT (Maine Department of Education, 2007).
- For the class of 2010, ACT participation in Colorado, Illinois, Kentucky, Michigan, Tennessee, and Wyoming included virtually all graduates, rather than only college-bound students (ACT, 2010c). These states require all public school 11th graders to take the ACT as part of statewide assessment programs. North Dakota began the same practice this past spring, and three other states-Arkansas, Texas and Utah-have been, or will soon begin, offering the ACT to all school districts at state expense.

## Performance

- Score differences across states are difficult to interpret unless participation rates and student demographics are similar (see the section, "Interpretation of Results," on page 18). Given two groups with very different participation rates but comparable ability levels, the average score for the group with a very low participation rate will tend to be higher than the average score for the group with a very high participation rate, even though there is no actual difference in group ability levels. States with SAT participation rates similar to the rate in Texas (53\%) include California, Oregon, and Washington (Table 34). States with ACT participation rates similar to Texas's (33\%) include Nevada and Oregon (Table 35 on page 65).

## Compliance Statement

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
