

# Setting Performance Measure Progress Expectations on STAAR for English Learners

Described below is a procedure for setting the performance measure progress expectations for all eligible English learners (EL) to determine whether an EL student is making sufficient progress towards meeting State of Texas Assessments of Academic Readiness (STAAR®) performance standard (i.e., Approaches Grade Level, Meets Grade Level, and Masters Grade Level). The progress expectations for EL performance measure (ELPM) will be set individually for each eligible EL student on each eligible STAAR assessment (see Table 1).

Determining progress measures on STAAR for EL students is applicable for all recently arrived English learners (RAELs).

- To comply with ESSA requirements, RAELs are defined as students who are in their second year in U.S. schools. All Texas EL students are expected to exit the EL program after four or five years, which is a challenging but achievable timeframe for second language acquisition based on currently available second language acquisition research.<sup>1</sup>
- The following student information will be used to determine each student’s expected years to exit the EL program:
  - number of years in U.S. schools
  - Texas English Language Proficiency Assessment System (TELPAS) composite rating

**Table 1. ELPM Plan Based on Students’ TELPAS Composite Ratings**

Number of Years in U.S. Schools	TELPAS Composite Rating	ELPM Plan (Expected Years to Exit the EL Program)	
		All Except English I & II	English I & II
2	1, 2	4	5
	3	3	4
	4	2	3

The number of years in U.S. schools and TELPAS composite rating are used to determine the ELPM plan for each eligible student. The performance measure progress expectations are set for each EL student based on their ELPM plan, number of years in U.S. schools, and their STAAR performance level. Calculations are done for new students when they meet the eligibility criteria for the first time. Some students who took their first EOC tests prior to the December 2022 administration are held to slightly lower STAAR standards. The progress expectation calculations use the appropriate standards. Students who have valid STAAR scale scores

<sup>1</sup>Hakuta, K., Butler, Y.G., & Witt, D. (2000). How long does it take English learners to attain proficiency? *University of California Linguistic Minority Research Institute Policy Report 2000-1*. Santa Barbara, CA: University of California-Santa Barbara.

(English version) and TELPAS composite ratings are included unless they are not identified as currently EB/EL students or have a parental denial for language services.

An equal-spacing method will be used to space the expectations within the scale score range starting from the chance level (or guessing point) to the Approaches Grade Level, from Approaches Grade Level to Meets Grade Level, and from Meets Grade Level to Masters Grade Level scale score cuts of each STAAR assessment (see Figure 1).

**Figure 1. Three Scale Score Ranges (Distances) Used for Progress Expectation Calculations**

The scale score values for the Approaches Grade Level ( $SS_{Approaches}$ ), Meets Grade Level ( $SS_{Meets}$ ), and Masters Grade Level ( $SS_{Masters}$ ) are in the spring 2023 STAAR raw score-to-scale score conversion tables. To find the chance-level scale score value for each test:

- Calculate the chance-level raw score point for a given test as:
  - the number of dichotomous items times 0.25,
- round the chance-level raw score to an integer if it is not an integer,
- find the chance-level scale score value ( $SS_{Chance}$ ) from spring 2023 STAAR raw score-to-scale score conversion tables.

The three scale score ranges (distances) in Figure 1 are then calculated:

- Distance 1 =  $SS_{Approaches} - SS_{Chance}$
- Distance 2 =  $SS_{Meets} - SS_{Approaches}$
- Distance 3 =  $SS_{Masters} - SS_{Meets}$

Equally space the three scale score ranges (distances) into step values by the appropriate ELPM Plan by dividing each distance by a student's ELPM Plan as the step value for the student. A student's Number of Years in U.S. Schools (2) is then used to determine the student's performance measure progress expectations as follows:

- $ELPM\ Approaches = SS_{Chance} + \frac{Distance\ 1}{ELPM\ Plan} * 2$
- $ELPM\ Meets = SS_{Approaches} + \frac{Distance\ 2}{ELPM\ Plan} * 2$
- $ELPM\ Masters = SS_{Meets} + \frac{Distance\ 3}{ELPM\ Plan} * 2$

Round each progress expectation value up to the next whole number. Three indicators can be produced for each eligible EL student on whether they have met the performance measure progress expectations towards achieving each STAAR performance standard by comparing each EL students' STAAR scale scores to the progress expectations. The three indicators are:

- progress towards achieving Approaches Grade Level: Met (1) or Did Not Meet (0)
- progress towards achieving Meets Grade Level: Met (1) or Did Not Meet (0)
- progress towards achieving Masters Grade Level: Met (1) or Did Not Meet (0)

The corresponding scale scores for the performance measure progress expectations needed for the reporting of ELPM for the RAELs are included in the Appendix.
